Gotthold Ephraim Lessing first published *Laokoon, oder über die Grenzen der Mahlerey und Poesie* (Laocoon, or on the Limits of Painting and Poetry) in 1766. Over the last 250 years, Lessing's essay has exerted an incalculable influence on western critical thinking. Not only has it directed the history of post-Enlightenment aesthetics, it has also shaped the very practices of 'poetry' and 'painting' in a myriad of different ways. In this anthology of specially commissioned chapters - comprising the first ever edited book on the Laocoon in English - a range of leading critical voices has been brought together to reassess Lessing's essay on its 250th anniversary. Combining perspectives from multiple disciplines (including classics, intellectual history, philosophy, aesthetics, media studies, comparative literature, and art history), the book explores the Laocoon

from a plethora of critical angles. Chapters discuss Lessing's interpretation of ancient art and poetry, the cultural backdrops of the eighteenth century, and the validity of the Laocoon's observations in the fields of aesthetics, semiotics, and philosophy. The volume shows how the Laocoon exploits Greek and Roman models to sketch the proper spatial and temporal 'limits' (Grenzen) of what Lessing called 'poetry' and 'painting'; at the same time it demonstrates how Lessing's essay is embedded within Enlightenment theories of art, perception, and historical interpretation, as well as within nascent eighteenth-century ideas about the 'scientific' study of Classical antiquity (Altertumswissenschaft). To engage critically with the Laocoon, and to make sense of its legacy over the last 250 years, consequently involves excavating various 'classical presences': by looking back to the Graeco-Roman past, the volume demonstrates, Lessing forged a whole new tradition of modern aesthetics.

They also represent six eras that span the course of civilization—from the adoption of agriculture, to the birth of cities, to the advent of globalization. A History of the World in 6 Glasses tells the story of humanity from the Stone Age to the twenty-first century through each epoch's signature refreshment. As Standage persuasively argues, each drink is in fact a kind of technology, advancing culture and catalyzing the intricate interplay of different societies. After reading this enlightening book, you may never look at your favorite drink in quite the same way again.

Cynics and Skeptics, Epicureans and Stoics, emperors and slaves, and traces the development of Christian and Jewish philosophy and of ancient science. Chapters are devoted to such major figures as Epicurus, Lucretius, Cicero, Seneca, Plotinus, and Augustine. But in keeping with the motto of the series, the story is told 'without any gaps,' providing an in-depth look at less familiar topics that remains suitable for the general reader. For instance, there are chapters on the fascinating but relatively obscure Cyrenaic philosophical school, on pagan philosophical figures like Porphyry and Iamblichus, and extensive coverage of the Greek and Latin Christian Fathers who are at best peripheral in most surveys of ancient philosophy. A major theme of the book is in fact the competition between pagan and Christian philosophy in this period, and the Jewish tradition also appears in the shape of Philo of Alexandria. Ancient science is also considered, with chapters on ancient medicine and the interaction between philosophy and astronomy. Considerable attention is paid also to the wider historical context, for instance by looking at the ascetic movement in Christianity and how it drew on ideas from Hellenic philosophy. From the counter-cultural witticisms of Diogenes the Cynic to the subtle skepticism of Sextus Empiricus, from the irreverent atheism of the Epicureans to the ambitious metaphysical speculation of Neoplatonism, from the ethical teachings of Marcus Aurelius to the political philosophy of Augustine, the book gathers together all aspects of later ancient thought in an accessible and entertaining way.

This book examines migration and colonialism in the ancient Near East in the late second millennium BCE, with a focus on the Levant. It explores how the area was shaped by these movements of people, especially in forming the new Iron Age societies. The book utilises recent sociological studies on group identity, violence, migration, colonialism and settler colonialism in its reconstruction of related social and political changes. Prime examples of migrations that are addressed include those involving the Sea Peoples and Philistines, ancient

Israelites and ancient Arameans. The final chapter sets the developments in the ancient Near East in the context of recent world history from a typological perspective and in terms of the legacy of the ancient world for Judaism and Christianity. Altogether, the book contributes towards an enhanced understanding of migration, colonialism and violence in human history. In addition to academics, this book will be of particular interest to students of this period in the Ancient Near East, as well anyone working on migration and colonialism in the ancient world. The book is also suitable to the general public interested in world history.

The Enduring Ancient Egyptian Musical System Theory and Practice Moustafa Gadalla Exploring what great philosophers have written about the nature of knowledge and about how we know what we know, this is a concise and accessible introduction to the field of epistemology. *Epistemology: The Key Thinkers* tells the story of how epistemological thinking has developed over the centuries, through the work of the finest thinkers on the topic. Chapters by leading contemporary scholars guide readers through the ideas of key philosophers, beginning with Plato and Aristotle, through Descartes and the British empiricists, to such twentieth-century thinkers such as Wittgenstein, Quine, Goldman, and beyond. The final chapter looks to the future, highlighting some of the very latest debates that energise philosophical writing today about knowledge. Each chapter ends with a guide to further reading, encouraging students to explore the key writings for themselves, making *Epistemology: The Key Thinkers* a perfect guide for study, revision, and reference. Many fundamental studies of the origins of states have built upon landscape data, but an overall study of the Near Eastern landscape itself has never been attempted. Spanning thousands of years of history, the ancient Near East presents a bewildering range of

landscapes, the understanding of which can greatly enhance our ability to infer past political and social systems. Tony Wilkinson now shows that throughout the Holocene humans altered the Near Eastern environment so thoroughly that the land has become a human artifact, albeit one that retains the power to shape human societies. In this trailblazing book—the first to describe and explain the development of the Near Eastern landscape using archaeological data—Wilkinson identifies specific landscape signatures for various regions and periods, from the early stages of complex societies in the fifth to sixth millennium B.C. to the close of the Early Islamic period around the tenth century A.D. From Bronze Age city-states to colonized steppes, these signature landscapes of irrigation systems, tells, and other features changed through time along with changes in social, economic, political, and environmental conditions. By weaving together the record of the human landscape with evidence of settlement, the environment, and social and economic conditions, Wilkinson provides a holistic view of the ancient Near East that complements archaeological excavations, cuneiform texts, and other conventional sources. Through this overview, culled from thirty years' research, Wilkinson establishes a new framework for understanding the economic and physical infrastructure of the region. By describing the basic attributes of the ancient cultural landscape and placing their development within the context of a dynamic environment, he breaks new ground in landscape archaeology and offers a new context for understanding the ancient Near East.

*In *The Taming of Jesus by Christianity*, Wayne Mahan peels back the layers of Christianity to provide his readers with a dramatic account of how the original radical teachings of Jesus were domesticated and transformed into a world-changing religion. Mahan's book is written for a modern public that has become increasingly uncomfortable with the idea of formal, institutionalized religion. He demonstrates that Christianity has at its core Jesus' demand of love, embodied in the Sermon on the Mount, and that this demand was simply too radical to form a viable religion. Mahan walks the reader through the New Testament, showing how this radical demand of love stands at the center of the synoptic gospels, and how it is systematically transformed by Paul and the Gospel of John into a faith in Jesus as atoning sacrifice and God-Man that is formalized and institutionalized by the Council of Nicaea. In a surprising and compelling presentation, Mahan argues that this transformation of the Christian message was a necessary betrayal that allowed the original radical message of Jesus to be carried within a palatable host religion, rather than be rejected and abandoned two millennia ago. *The Taming of Jesus* combines a succinct survey of the New Testament with a pointed examination of the central ideas of the Christian faith.*

**Classical Philosophy is the first of a series of books in which Peter Adamson aims ultimately to present a complete history of philosophy, more thoroughly but also more enjoyably than ever before. In short, lively chapters, based on the popular History of Philosophy podcast, he offers an accessible, humorous, and detailed look at the emergence of philosophy with the Presocratics, the probing questions of Socrates, and the first full flowering of philosophy with the dialogues of Plato and the treatises of Aristotle. The story is told 'without any gaps', discussing not only such major figures but also less commonly discussed topics like the Hippocratic Corpus, the Platonic Academy, and the role of women in ancient philosophy. Within the thought of Plato and Aristotle, the reader will find in-depth introductions to major works, such as the Republic and the Nicomachean Ethics, which are treated in detail that is unusual in an introduction to ancient philosophy. Among results discussed are the close links of some of the pyramid theories with other theories, such as the theory of evolution, as well as the relationship between the pyramid theories and the struggle against the introduction of the metric system. Of special note is the chapter examining how some theories spread whereas others were rejected. Hailed by The New York Times as "a compelling dystopian look at paranoia from one of the most unique and perceptive writers of our time," this brief, captivating novel offers a cautionary tale. The story unfolds within a society in which all traits of individualism have been eliminated from every aspect of life — use of the word "I" is a capital offense. The hero, a rebel who discovers that man's greatest moral duty is the pursuit of his own happiness, embodies the values the author embraced in his personal philosophy of objectivism: reason, ethics, volition, and individualism.

in the rough, often dwarfed by the superstar company it keeps with the author's more popular work, but every bit as gripping, daring, and powerful." Anthem is a dystopian fiction novella by Ayn Rand, written in 1937 and first published in 1938 in England. It takes place at some unspecified future date when mankind has entered another dark age characterized by irrationality, collectivism, and socialistic thinking and economics. Technological advancement is now carefully planned (when it is allowed to occur at all) and the concept of individuality has been eliminated. In 1177 B.C., marauding groups known only as the "Sea Peoples" invaded Egypt. The pharaoh's army and navy managed to defeat them, but the victory so weakened Egypt that it soon slid into decline, as did most of the surrounding civilizations. After centuries of brilliance, the civilized world of the Bronze Age came to an abrupt and cataclysmic end. Kingdoms fell like dominoes over the course of just a few decades. No more Minoans or Mycenaeans. No more Trojans, Hittites, or Babylonians. The thriving economy and cultures of the late second millennium B.C., which had stretched from Greece to Egypt and Mesopotamia, suddenly ceased to exist, along with writing systems, technology, and monumental architecture. But the Sea Peoples alone could not have caused such widespread breakdown. How did it happen? In this major new account of the causes of this "First Dark Ages," Eric Cline tells the gripping story of how the end was brought about by multiple

interconnected failures, ranging from invasion and revolt to earthquakes, drought and the cutting of international trade routes. Bringing to life the vibrant multicultural world of these great civilizations, he draws a sweeping panorama of the empires and globalized peoples of the Late Bronze Age and shows that it was their very interdependence that hastened their dramatic collapse and ushered in a dark age that lasted centuries. A compelling combination of narrative and the latest scholarship, 1177 B.C. sheds new light on the complex ties that gave rise to, and ultimately destroyed, the flourishing civilizations of the Late Bronze Age—and that set the stage for the emergence of classical Greece.

This book presents a complete and accessible description of the history of early India. It starts by discussing the origins and growth of civilizations, empires, and religions. It also deals with the geographical, ecological, and linguistic background and looks at specific cultures of the Neolithic, Chalcolithic, and Vedic periods, as well as at the Harappan civilization. In addition, the rise of Jainism and Buddhism in Magadha and the beginning of territorial states, and the period of Mauryas, Central Asian countries, Satvahanas, Guptas, and Harshavardhana are also analysed. Next, it stresses varna system, urbanization, commerce and trade, developments in science and philosophy, and cultural legacy. Finally, the process of transition from ancient to medieval India and the origin of the Aryan culture has also been examined.

Dalinar Kholin's Alethi armies won a fleeting victory at a terrible cost: The enemy Parshendi summoned the violent Everstorm, which now sweeps the world with destruction, and in its passing awakens the once peaceful subservient parshmen to the horror of their millennia-long enslavement by humanity. While on a desperate flight to warn his family of the threat, Kaladin Stormblessed must come to grips with the fact that the newly kindled anger of the parshmen may be wholly justified. Nestled in the mountains high above the storms, in the towers of Urithiru, Shallan Davar investigates the wonders of the ancient stronghold of the Knights Radiant and unearths dark secrets lurking in its depths. Ishtar is the first book dedicated to providing an accessible analysis of the mythology and image of this complex goddess. The polarity of her nature is reflected in her role as goddess of sexual love and war, and has made her difficult to characterise in modern scholarship. By exploring this complexity, Ishtar offers insight into Mesopotamian culture and thought, and elucidates a goddess who transcended the limits of gender, divinity and nature. It gives an accessible introduction to the Near Eastern pantheon, while also opening a pathway for comparison with the later Near Eastern and Mediterranean deities who followed her.

Various technical aspects of Ricci flow have been explained in a clear and detailed manner. The authors have tried to make some advanced material accessible to graduate students and nonexperts. The book gives a rigorous introduction to Perelman's work and explains technical aspects of Ricci flow useful for singularity analysis.
