The book, written with a rich teaching and research experience of the author, emphasises the critical evaluation of contemporary human rights law and practice with special reference to India. It evaluates the ongoing discourse on various issues relating to life, liberty, equality, and human dignity and their reflections in international human rights law referring to the state practices through constitutional guarantees, judicial decisions as well as through

enacting appropriate legislations. This lucid and comprehensive book is logically organised into nine chapters. Beginning with the theoretical foundations of human rights law referring to origin, development, and theories of human rights at the preliminary level, the book proceeds to “ International Bill of Human Rights ” demonstrating various facets of civil and political rights as well as economic, social and cultural rights. It further discusses the importance of human rights law in protection against inhuman wrongs and examines a large number of debates concerning human rights to the development and protection of the environment. Then, it moves on to explore various

issues relating to human rights in Indian Constitutional Law. The second half of the book emphasises the protection of the rights of women and children, which has been the focal point of all human rights discussions. It also deals with the scope and ambit of the rights of indigenous peoples and minorities including their protection. At the end, the book examines the utility and justifications of human rights law in protecting the rights of people with disabilities (divyang). issues pose a fundamental challenge to law because it is impossible to reliably predict which issues contain the possibility of an emergency and what to do in response to such an unforeseen event. These features undermine the conventional understanding of the rule of law. This book argues that approaching environmental issues from the emergency perspective leads us to an understanding of the rule of law that requires public justification. This requirement recentres the debates in environmental law around the question of why governance under the rule of law is something worth having in the environmental context. It elaborates what the rule of law requires of decision-

makers in light of our ever-present vulnerability to catastrophic environmental harm. Controversial, compelling and above all timely, this book presents an important new perspective on environmental law. This monograph addresses the phenomenon of mass harm and how it may be resolved through collective redress. It examines particularly how such redress may be achieved through mechanisms such as multi-party actions (MPAs). In order to do this, an analytical framework is created against which to evaluate various multi-party procedures. This is illustrated through the experience of a selection of common law jurisdictions in dealing with mass harm – namely that of England

and Wales, Canada, Australia and the United States, as well as that of EU collective redress. It examines multi-party action laws benchmarked against the objectives identified in the analytical framework. The phenomenon of environmental mass harm in particular is explored as a case study, as it illustrates some of the difficulties that may arise in mass harm litigation. Also, this work explores where the best solutions for mass harm redress may lie in the future – perhaps in collective actions or through alternatives such as regulation and alternative dispute resolution or a combination of these. Finally, the experience of mass harm litigation in Ireland is examined, as currently this

*This volume provides a framework for the doctrinal foundation of sustainable development as a principle of integration in international law. The work departs from the fragmented nature of the international legal system, a system that lacks integrative principles for creating coherent relations between, for example, the international trade regime of the WTO and multilateral environmental agreements. The specific focus is on a legal analysis of potential normative conflicts between climate measures as regulated by the UNFCCC and the Kyoto Protocol, in particular the flexibility instruments of international emissions*

*Environmental law and policy in India affects all sections of society. Those most deeply affected by it are the poor. They are the first victims of poor sanitation, polluted air, and contaminated water. Since the 1970s, efforts to protect environmental quality have met with limited success, posing enduring challenges for policy designers and decision-makers entrusted with protecting and preserving natural resources. This edition of Environmental Law and Policy retains*
