Introduction to Policing focuses on the thought-provoking, contemporary issues that underscore the challenging and rewarding world of policing. The authors skillfully balance research and practice to offer readers an overview of both the foundations of policing and the expanded role of today ' s police officers. Evolving with the modern realities of the field, the Fourth Edition discusses major new and ongoing impactful events, such as the political shift marked by the U.S. presidential election of 2016 and expanded coverage of women and minorities in policing. The broad perspective of this book has been shaped in conversation with the Catholic Mobilizing Network to End the Use of the Death Penalty, as well as through the witness of family members of murder victims and the spiritual advisors of condemned inmates. The book offers the reader new insight into the debates about capital punishment; provides revealing, and sometimes surprising, information about methods of execution; and explores national and international trends and movements related to the death penalty. It also addresses how the death penalty has been intertwined with racism, the high percentage of the mentally disabled on death row, and how the death penalty disproportionately affects the poor. The foundation for the church's position on the death penalty is illuminated by discussion of the life and death of Jesus, Scripture, the Mass, the Catechism of the Catholic Church, and the teachings of Pope John Paul II. Written for concerned Catholics and other interested readers, the book contains contemporary stories and examples, as well as discussion questions to engage groups in exploring complex issues.

*Crime Prevention text is written for courses within a criminal justice or sociology curriculum. Co-Editor and author, David Mackey begins by emphasizing the importance of crime prevention as it relates to financial and social costs and introduces students to the theoretical models of crime prevention. The subsequent order of the chapters parallels the medical model of crime prevention moving from primary crime prevention, secondary crime prevention, and tertiary crime prevention efforts. Traditional areas of crime prevention are reflected in the chapters on family/schools, guns, policing, sentencing, and correctional programs, and additional chapters cover emerging areas now considered critical to crime prevention, such as technology, surveillance, and specific efforts to protect more vulnerable populations. *Growing an Entrepreneurial Business: Concepts and Cases is a textbook designed for courses that focus on managing small to medium sized enterprises. It focuses on the major management challenges that successful start-ups encounter when leaders decide to grow and scale their businesses. The book is divided into two parts—text and cases—to provide professors with maximum flexibility in organizing their courses. The thirty-five cases can be used in conjunction with the text, or independently. Twelve cases are written as narratives with multiple teaching points, but without a focus on a particular business decision; the remaining twenty-three cases were written around specific conundrums related to strategy, operations, finance, marketing, leadership, culture, human resources, organizational design, business model, and growth. Discussion questions are provided for each case. The text portion of the book discusses key issues derived from the author's research and consulting, and is meant to complement the case method of teaching, raising issues for conversation. In addition to the real-world knowledge that students will derive from the cases, readers will take away research-based templates and models that they can use in developing or consulting with small businesses.*

*Philosophy: An Innovative Introduction features a unique, engaging approach to introduce students to philosophy. It combines traditional readings and exercises with fictive narratives starring central figures in the history of the field from Plato to Martin Luther King, Jr. The book makes innovative use of compelling short stories from two writers who have prominently combined philosophy and fiction in their work. These narratives illuminate pivotal aspects of the carefully selected classic readings that follow. This gives students two ways to understand the philosophical positions: through indirect argument in fiction and through direct, deductive presentations. Study questions and writing exercises accompany each set of readings and help students grasp the material and create their own arguments.*

The Basic Practice of Statistics has become a bestselling textbook by focusing on how statistics are gathered, analyzed, and applied to real problems and situations—and by confronting student anxieties about the course's relevance and difficulties head on. With David Moore's pioneering "data analysis" approach (emphasizing statistical thinking over computation), engaging narrative and case studies, current problems and exercises, and an accessible level of mathematics, there is no more effective textbook for showing students what working statisticians do and what accurate interpretations of data can reveal about the world we live in. In the new edition, you will once again see how everything fits together. As always, Moore's text offers balanced content, beginning with data analysis, then covering probability and inference in the context of statistics as a whole. It provides a wealth of opportunities for students to work with data from a wide range of disciplines and real-world settings, emphasizing the big ideas of statistics in the context of learning specific skills used by professional statisticians. Thoroughly updated throughout, the new edition offers new content, features, cases, data sources, and exercises, plus new media support for instructors and students—including the latest version of the widely-adopted StatsPortal. The full picture of the contemporary practice of statistics has never been so captivatingly presented to an uninitiated audience.
