His rich discovery will make history, if someone doesn't steal it first.Darwin Lacroix wants to rewrite the story of the past. The archaeologist knows that a \$10 million discovery of diamonds in Iceland is just a fraction of Emperor Nero's fortune. He's read the ancient scrolls buried beneath Mt. Vesuvius, and he's about to prove that Nero lined the lava tubes with impossible amounts of gold. But when a powerful cartel seizes control of the hunt, Darwin's quest becomes a race against time to reveal the mother lode first.With a volcanologist and an unsavory diamond expert on board, the academic's search for riches meets lethal obstacles at every turn. Deep underground, the choices Darwin makes could determine who in his party makes it out alive.Roman Ice is a thrilling suspense novel in the tradition of Sahara, The Lost World, and Treasure Island. If you like alternate history, archaeological adventures, and complex characters, then you'll love Dave Bartell's action-packed tale

Matt Drake's eighteenth adventure sees the team catapulted into a rip-roaring archaeological romp that, unbeknown to them, began when they first discovered the Bones of Odin. The Weapons of the Gods were stolen from the countless tombs that Drake and his team uncovered; then sold on, coveted and killed for. Now, the new promise of their combined power has unleashed a formidable force who will stop at nothing to own them all. Thrown into the new quest against their will, Team Spear face incredible odds--they are being hunted by their own government whilst trying to feed out highly placed traitors, and stop global mercenary and terrorist forces from causing worldwide mayhem. The team battle from Texas to Greece, from deserted islands to London, from Syria to Washington DC, as they identify the traitors that disavowed them and join an incredible, once-in-a-lifetime battle where a force made up of hundreds of elite Special Forces soldiers takes on a vast army of terrorists in Syria.

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

The inspiration for the NBC drama New Amsterdam and in the spirit of Oliver Sacks, this intensely involving memoir from a former medical director of a major NYC hospital looks poignantly at patients' lives and reveals the author's own battle with cancer. Using the plights of twelve very different patients—from dignitaries at the nearby UN, to supermax prisoners at Riker's Island, to illegal immigrants, and Wall Street tycoons—Dr. Eric Manheimer “offers far more than remarkable medical dramas: he blends each patient’s personal experiences with their social implications” (Publishers Weekly). Manheimer was not only the medical director of the country's oldest public hospital for over 13 years, but he was also a patient. As the book unfolds, the narrator is diagnosed with cancer, and he is forced to wrestle with the end of his own life even as he struggles to save the lives of others.

A “necessary and brilliant” (NPR) exploration of our cultural fascination with true crime told through four “enthraling” (The New York Times Book Review) narratives of obsession. In Savage Appetites, Rachel Monroe links four criminal roles–Detective, Victim, Defender, and Killer–to four true stories about women driven by obsession. From a frustrated and brilliant heiress crafting crime-scene dollhouses to a young woman who became part of a Manson victim’s family, from a landscape architect in love with a convicted murderer to a Columbine fangirl who planned her own mass shooting, these women are alternately mesmerizing, horrifying, and sympathetic. A revealing study of women’s complicated relationship with true crime and the fear and desire it can inspire, together these stories provide a window into why many women are drawn to crime narratives—even as they also recoil from them. Monroe uses these four cases to trace the history of American crime through the growth of forensic science, the evolving role of victims, the Satanic Panic, the rise of online detectives, and the long shadow of the Columbine shooting. Combining personal narrative, reportage, and a sociological examination of violence and media in the 20th and 21st centuries, Savage Appetites is a “corrective to the genre it interrogates” (The New Statesman), scrupulously exploring empathy, justice, and the persistent appeal of crime.

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, From Neurons to Neighborhoods presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

Witchcraft and magic are topics of enduring interest for many reasons. The main one lies in their extraordinary interdisciplinarity: anthropologists, folklorists, historians, and more have contributed to build a body of work of extreme variety and consistence. Of course, this also means that the subjects themselves are not easy to assess. In a very general way, we can define witchcraft as a supernatural means to cause harm, death, or misfortune, while magic also belongs to the field of supernatural, or at least esoteric knowledge, but can be used to less dangerous effects (e.g., divination and astrology). In Western civilization, however, the witch hunt has set a very peculiar perspective in which diabolical witchcraft, the invention of the Sabbat, the persecution of many thousands of (mostly) female and (sometimes) male presumed witches gave way to a phenomenon that is fundamentally different from traditional witchcraft. This Special Issue of Religions dedicated to Witchcraft, Demonology, and Magic features nine articles that deal with four different regions of Europe (England, Germany, Hungary, and Italy) between Late Medieval and Modern times in different contexts and social milieus. Far from pretending to offer a complete picture, they focus on some topics that are central to the research in those fields and fit well in the current "cumulative concept of Western witchcraft" that rules out all mono-causality theories, investigating a plurality of causes.

An exploration of how design might be led by marginalized communities, and advance collective liberation and ecological survival. What is the relationship between design, power, and social justice? 'Design justice' is an approach to design that is led by marginalized communities and that aims explicitly to challenge, rather than reproduce, structural inequalities. It has emerged from a growing community of designers in various fields who work closely with social movements and community-based organizations around the world. This book explores the theory and practice of design justice, demonstrates how universalist design principles and practices erase certain groups of people—specifically, those who are intersectionally disadvantaged or multiply burdened under the matrix of domination (white supremacy/heteropatriarchy, ableism, capitalism, and settler colonialism)—and invites readers to ‘build a better world, a world where many worlds fit: linked worlds of collective liberation and ecological sustainability.’ Along the way, the book documents a multitude of real-world community-led design practices, each grounded in a particular social movement. Design Justice goes beyond recent calls for design for good, user-centered design, and employment diversity in the technology and design professions: it connects design to larger struggles for collective liberation and ecological survival.
