Soil enzymes are one of the vital key mediators involved in nutrient recycling and the decomposition of organic matter and thereby in maintaining soil quality and fertility. This Soil Biology volume covers the various facets of soil enzymes, such as their functions, biochemical and microbiological properties and the factors affecting their activities. Enzymes in the rhizosphere, in forest soils, and in volcanic ash-derived soils are described. Soil enzymes covered include phosphohydrolases, lignocellulose-degrading enzymes, phenol oxidases, fungal oxidoreductases, keratinases, pectinases, xylanases, lipases and pectinases. Several chapters treat the soil enzymatic activities in the bioremediation of soils contaminated with pesticides and pollutants such as oil, chlorinated compounds, synthetic dyes and aromatic hydrocarbons. The role of soil enzymes as bioindicators is a further important topic covered.

The WHO Classification of Tumours Central Nervous System Tumours is the sixth volume in the 5th edition of the WHO series on the classification of human tumors. This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumors and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. What’s new in this edition? The 5th edition, guided by the WHO Classification of Tumours Editorial Board, will establish a single coherent cancer classification presented across a collection of individual volumes organized on the basis of anatomical site (digestive system, breast, soft tissue and bone, etc.) and structured in a systematic manner, with each tumor type listed within a taxonomic classification: site, category, family (class), type, and subtype. In each volume, the entities are now listed from benign to malignant and are described under an updated set of headings, including histopathology, diagnostic molecular pathology, staging, and easy-to-read essential and desirable diagnostic criteria. Who should read this book? Pathologists Neuro-oncologists Neuroradiologists Medical oncologists Radiation oncologists Neurosurgeons

Oncology nurses Cancer researchers Epidemiologists Cancer registrars This volume Prepared by 199 authors and editors Contributors from around the world More than 1100 high-quality images More than 3600 references WHO Classification of Tumours Online The content of this renowned classification series is now also available in a convenient digital format by purchasing a subscription directly from IARC here.

covers the entire spectrum of this fast-changing field. Diagnostic Imaging: Chest, third edition, is an invaluable resource for general radiologists, thoracic radiologists, and trainees—anyone who requires an easily accessible, highly visual reference on today’s thoracic imaging. Drs. Melissa L. Rosado-de-Christenson, Santiago Martinez-Jimenez, and their team of highly regarded experts provide up-to-date information on recent advances in technology and the understanding of chest diseases to help you make informed decisions at the point of care. The text is lavishly illustrated, delineated, and referenced, making it a useful learning tool as well as a handy reference for daily practice. Serves as a one-stop resource for key concepts and information on chest imaging, including a wealth of new material and content updates throughout Features more than 2,800 illustrations (full-color drawings, clinical and histologic photographs, and gross pathology images) as well as video clips demonstrating the diaphragmatic paralysis positive sniff test, virtual bronchoscopy Fly-through, and more Features updates from cover to cover including new information on pulmonary manifestations of coronavirus infection/COVID-19 and numerous new chapters throughout Reflects updates in terminology and imaging findings of common neoplastic disorders (including primary lung cancer and lymphoma), and novel imaging findings of inhalational lung diseases, including those related to vaping Covers common thoracic malignancies and chest diseases with details on the latest knowledge in the field, including lung screening with low-dose chest CT, approach to the patient with incidentally discovered lung nodules, and updates on the imaging manifestations and management recommendations for common pulmonary infections Uses bulleted, succinct text and highly templated chapters for quick comprehension of essential information at the point of care

This book constitutes the thoroughly refereed post-workshop proceedings of the 10th International Workshop of the Initiative for the Evaluation of XML Retrieval, INEX 2011, held in Saarbrücken, Germany, in December 2011. The 33 revised full papers presented were carefully reviewed and selected for presentation at the workshop from 36 submissions. The papers are organized in 5 research tracks on book and social search, Xdata centric, question answering, relevance feedback, and snippet retrieval.

Central Nervous System Tumours: Who Classification of Tumours

This textbook provides a clear and authoritative guide to the principles and practice of the utilization of enzymes in biotechnology. Enzymes have increasingly important applications in the food and pharmaceutical industries, in medicine, and as biosensors.

La biologie moléculaire est une discipline qui a bouleversé les sciences du vivant. De nombreux laboratoires et équipes se tournent de plus en plus vers les techniques d'analyse et de caractérisation d'acides nucléiques afin d'améliorer leurs connaissances d'un mécanisme biologique particulier. L'objectif de cet ouvrage, présenté sous forme de fiches, est, non pas de détailler des protocoles ou des recettes toutes faites, mais d'expliquer simplement les principes théoriques de ces techniques biologiques. Ces fiches sont le fruit de réflexions menées entre les chercheurs et la formation permanente de l'INRA. Elles ont été conçues lors d'actions de formation en biologie moléculaire végétale. C'est pourquoi un grand nombre d'exemples d'application sont tirés de cette discipline, mais la compréhension des méthodes peut être facilement étendue à tous les types d'organismes.

This book describes the method which Peggy Pace developed for healing adults and adolescents who experienced trauma or neglect in childhood. Lifespan Integration therapy differs from Cognitive Behavioral Therapy in that LI heals and integrates the body-minds of clients in multifaceted ways. LI therapy clears trauma memory and the defenses against early trauma throughout the body-mind. This is true even for cases when the trauma was pre-verbal and is not explicitly remembered. LI therapy can also be used to increase positive self-regard, to improve affect regulation, and to strengthen the core self. In her book, Pace describes how her Lifespan Integration method can be used to treat Post Traumatic Stress Disorder, anxiety and panic disorders, mood disorders, and eating disorders. In the chapter which discusses using LI to heal Dissociative Identity Disorder, Pace describes how Lifespan Integration therapy brings more coherence to the fragmented self systems of dissociated clients, eventually resulting in a unified self. The Lifespan Integration book includes a summary of recent discoveries in the field of neuroscience. Pace overviews what is known about how separated selves and self states become integrated within the developing child. Pace proposes in her book that neural integration continues throughout the lifespan, and can be expedited during therapy when the conditions required for neural integration are re-created within the therapeutic setting. Pace cites recent discoveries in the field of neuroscience to support her hypothesis about how and why her Lifespan Integration technique is so effective in the psychological healing of adult survivors of childhood trauma.

Drawing on the Household Living Arrangements of Older Persons 2019 Dataset, the World Population Ageing 2020 Highlights will document key patterns and trends of the household living arrangements of older persons around the world. These levels or trends will be described using indicators such as the average number of persons per household, the distribution of older persons by household type, by type of living arrangement and select characteristics of heads of household. The report will also address the impact of living arrangements of older persons on their vulnerability to the COVID-19 (coronavirus) pandemic. It will conclude with a brief discussion of global and regional trends in policies on population ageing based on the most recently available data from the United Nations Inquiry among Governments on Population and Development (2019).

The purpose of this book is to provide an introduction to materials science and engineering, the subject matter of which is taught not only in departments bearing that name, but also in departments of ceramics, polymer science, mechanical engineering, chemical engineering, civil engineering, physics, chemistry, and others. The field is so broad that it cannot possibly be represented fully in a one-semester introductory course, especially one which uses the kind of giant case-study method used here. The advantage of a case study is that it immediately immerses the student in a context which helps one to assimilate new information in an existing conceptual framework. Thus, the student can see the "big picture" from the outset and be able to understand how the subject fits together and is used. A disadvantage is that the various parts of the subject cannot all receive the amount of attention which practitioners of all those parts would feel they deserve. The student, therefore, should be aware that the fact that metallic materials have here received more space than polymeric, ceramic, or semiconducting materials, results, not from the relative importance of the latter three, but only from their present usage in the cases considered here."

Sets out the basic theory of normal modal and temporal propositional logics: applies this theory to logics of discrete (integer), dense (rational), and continuous (real) time, to the temporal logic of henceforth, next, and until, and to the propositional dynamic logic of regular programs.

Each title in the 'Primers in Biology' series is constructed on a modular principle that is intended to make them easy to teach from, to learn from, and to use for reference.

Contains all the illustrations from Frank H. Netter's Atlas of human anatomy, 3rd ed., 2003, as well as exam questions.

Intended for upper-level undergraduate and graduate courses in chemistry, physics, mathematics and engineering, this text is also suitable as a reference for advanced students in the physical sciences. Detailed problems and worked examples are included.

The first edition of The Paris System for Reporting Urinary Cytology introduced a completely new paradigm for detecting bladder cancer by urine cytology. This system concentrated on defining morphological characteristics of the most clinically significant form of bladder cancer, High Grade Urothelial Carcinoma. This new approach has been widely accepted throughout the world, and has become part of the daily practice of cytology. Considering that the first edition of The Paris System (TPS) introduced a new model of urinary cytodiagnosis, verification and expansion of initial material and data were anticipated. Based on evolving knowledge and readership requests, the group of highly experienced authors have created a new edition of TPS. This second edition includes areas and issues not originally covered. A new chapter on urine cytology of the upper tract, a rarely addressed topic, has been introduced. Furthermore, the issue of cellular degeneration is discussed in the criteria of all diagnostic categories. Examples of standardized reports are included in each chapter. Most importantly, a separate chapter presents data defining the risk of malignancy (ROM) for each diagnostic category to inform clinical management. New high quality images augment those of the first edition to better illustrate diagnostic clues and potential pitfalls. In addition to chapters on diagnostic criteria, current concepts of pathogenesis of bladder cancer, specimen adequacy and preparation, and ancillary tests are covered in separate chapters. A bonus to the volume is a comprehensive history of urine as the earliest diagnostic sample of human disease, richly illustrated with artworks from major museums. Written by internationally recognized authorities, this comprehensive and evidence-based guide to urine cytology is supported by the newest data confirming the original concept and significance of diagnostic criteria defining High Grade Urothelial Carcinoma.

TPS is an essential tool for anyone who is practicing urinary cytology, including cytotechnologists, pathologists-in-training and practicing pathologists. This book should find a place in every cytology laboratory throughout the world. The Concept has been endorsed by the American Society of Cytopathology, and the International Academy of Cytology.

In his highly anticipated sequel to The Elements, Theodore Gray demonstrates how the elements of the periodic table combine to form the molecules that make up our world. Everything physical is made up of the elements and the infinite variety of molecules they form when they combine with each other. In Molecules, Theodore Gray takes the next step in the grand story that began with the periodic table in his best-selling book, The Elements: A Visual Exploration of Every Known Atom in the Universe. Here, he explores through fascinating stories and trademark stunning photography the most interesting, essential, useful, and beautiful of the millions of chemical structures that make up every material in the world. Gray begins with an explanation of how atoms bond to form molecules and compounds, as well as the difference between organic and inorganic chemistry. He then goes on to explore the vast array of materials molecules can create, including: soaps and solvents; goops and oils; rocks and ores; ropes and fibers; painkillers and dangerous drugs; sweeteners; perfumes and stink bombs; colors and pigments; and controversial compounds including asbestos, CFCs, and thimerosal. Big, gorgeous photographs, as well as diagrams of the compounds and their chemical bonds, rendered with never before seen beauty, fill the pages and capture molecules in their various states. As he did in The Elements, Gray shows us molecules as we've never seen them before. It's the perfect book for his loyal fans who've been eager for more and for anyone fascinated with the mysteries of the material world.

Bioactive Compounds in Agricultural Soils

This volume looks at the impact that different cropping systems and tillage have on soil’s biologically active substances. It considers how phytotoxins accumulate and can inhibit the development of cultivated plants. Coverage explores the continuous cropping of rye, crop rotation, no tillage, and conventional tillage. It offers a comprehensive, comparative approach to allelopathic plant-soil interactions. The authors focus on free and bounded biologically active substances such as amino acids, austinins, humic and fulvic acids, transient radicals, and enzymes in light sand soils fertilized with different mineral and organic fertilizers. The chapters address fundamental questions relevant to the environmental challenges we face today and will deal with in the future. The results involve asking basic questions motivated by soil’s chemical and biochemical processes. The answers will lead to the improvement of the quality of soil’s organic matter, which, in turn, can lead to increased crop yields. Readers will come to understand the relationship between ecological processes and environmental change on individual levels of biocomplexity as well as on systems in their entirety. The title is ideal for students and teachers for laboratory practical classes. Soil scientists, biochemists, chemists, plant ecophysiolgists, “Natural Products” organic chemists, and other environmental scientists and specialists will also find it useful.

Can we unlock resilience to climate stress by better understanding linkages between the environment and biological systems? Agroclimatology allows us to explore how different processes determine plant response to climate and how climate drives the distribution of crops and their productivity. Editors Jerry L. Hatfield, Mannava V.K. Sivakumar, and John H. Prueger have taken a comprehensive view of agroclimatology to assist and challenge researchers in this important area of study. Major themes include: principles of energy exchange and climatology, understanding climate change and agriculture, linkages of specific biological systems to climatology, the context of pests and diseases, methods of agroclimatology, and the application of agroclimatic principles to problem-solving in agriculture.

In *Sociology of Culture and of Cultural Practices*, Laurent Fleury presents a synthesis of research and debate from France and the United States. He traces the development of the sociology of culture from its origins (Weber and Simmel) and examines the major trends that have emerged in this branch of sociology. Fleury also raises issues of cultural hierarchy, distinction, and legitimate culture and mass culture and focuses on new areas of research, including the role of institutions, the reception of works of art, aesthetic experience, and emancipation through art.

Forgiveness is a hollow prayer you only hear in your dreams. Patrick Collins has spent years handling cases as a special agent for the Supernatural Operations Agency, even as his secret standing in the preternatural world has changed. He should have confessed to his role as co-leader of the New York City god pack when he and Jonothon de Vere took up the mantle months ago, but he didn't. Now that split loyalty will cost him at a time when he can least afford it. Outmaneuvered, framed for murder, and targeted by the Dominion Sect, Patrick has to face a past full of lies to regain his freedom. Revealing the truth means he'll need to give up the life that has defined him. Everything he's fought to build with his pack is at stake, and losing them isn't a price Patrick is willing to pay, but some choices aren't his to make. Jono knows they can't cede any more territory if they want to win the god pack civil war spilling into the streets of New York City. But the souls of wererecreates are free for the taking when demons come to town and angels sing a warning no one can ignore. When Jono's worst fear comes to life, and he loses the one person he can't live without, the only option left is to fight. Facing down the demons of their past and the ones in their present, Patrick and Jono will learn the hard way that some sins never wash away clean. An Echo in the Sorrow is a 118k word m/m urban fantasy with a gay romantic subplot. It is a direct sequel to On the Wings of War. Reading the first book in the series would be helpful in enjoying this one.

A number of countries in Europe and North America have been using fertilizers heavily for a number of years and particularly since 1945. This high level of fertilizer applications is essential to supply the necessary food for increasing populations and to meet higher demands for animal and plant products. Effects of fertilizer use on the environment should show first in countries where fertilizers have been used intensively for some time and where consumption is steadily rising. It is the experience gained in such countries which is being discussed below with a view to assessing the impact of fertilizers on the human environment, including the development of methods for recognizing and minimizing any undesirable consequences which may be produced. It should be realized that high densities of human population combined with intensive crop and livestock production have led to the production of organic wastes at a rate too high for natural processes to convert it into equally safe compounds. Therefore both direct and indirect effects of intensive fertilizer use have been reviewed.

In this book, an integrated introduction to statistical inference is provided from a frequentist likelihood-based viewpoint. Classical results are presented together with recent developments, largely built upon ideas due to R.A. Fisher. The term ‘neo-Fisherian’ highlights this.After a unified review of background material (statistical models, likelihood, data and model reduction, first-order asymptotics) and inference in the presence of nuisance parameters (including pseudo-likelihoods), a self-contained introduction is given to exponential families, exponential dispersion models, generalized linear models, and group families. Finally, basic results of higher-order asymptotics are introduced (index notation, asymptotic expansions for statistics and distributions, and major applications to likelihood inference).The emphasis is more on general concepts and methods than on regularity conditions. Many examples are given for specific statistical models. Each chapter is supplemented with problems and bibliographic notes. This volume can serve as a textbook in intermediate-level undergraduate and postgraduate courses in statistical inference.

This new and unique book demonstrates that Excel and VBA can play an important role in the explanation and implementation of numerical methods across finance. *Advanced Modelling in Finance* provides a comprehensive look at equities, options on equities and options on bonds from the early 1950s to the late 1990s. The book adopts a step-by-step approach to understanding the more sophisticated aspects of Excel macros and VBA programming, showing how these programming techniques can be used to model and manipulate financial data, as applied to equities, bonds and options. The book is essential for financial practitioners who need to develop their financial modelling skill sets as there is an increase in the need to analyse and develop ever more complex ‘what if’ scenarios. Specifically applies Excel and VBA to the financial markets Packaged with a CD containing the software from the examples throughout the book Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

*The Science of the Marathon and the Art of Variable Pace Running encourages you to rediscover running by gradually slowing down, running at your own pace, and learning to accelerate. This book is about Veronique Billat's 30 years of research, life studies, and practical experience. This research takes place in real life and extreme racing situations; it does not take place on treadmills, rather in marathon races and the high mountains. It's about adapting new technologies to the needs of training and understanding the possibilities for the improvement of human energy. The key to long term success without injury or overtraining is to train with quality and not quantity. It is no longer necessary to train by running long distances in preparation for specific types of running races. Performance is not just about a result, but rather a road to true happiness. We invite you to discover this new way of running as it is a realistic minimalist-based training using your running mind-body feelings sensations and your lifestyle. The practice of marathon running is not only a safe and healthy activity, it is also a way to improve your health. I know everything I needed to know about marathon pacing before I read The Science of the Marathon. Whether your goal is to complete a marathon with a smile on your face or set a new personal best. Dr. Billat and Edwards fascinating and persuasive book will help you prepare with greater purpose and race with more confidence. –Matt Fitzgerald, author of *80/20 Running, Brain Training For Runners, Life is a Marathon, and many others.* This amazing book covering 30 years of exercise science and human experience from Dr. Billat is designed for the coach, scientist, or running enthusiast who desires to understand the physiology and variability of individual runners. I learned some new and interesting things and the book reaffirms that doing accelerations and varying the pace spontaneously on runs is a good thing. I have never used GPS-watch and run by feel, so it is nice to hear that it is not crazy. It's refreshing to read about optimizing fat metabolism as this is the evolutionary fuel of the human. At age 53, this book keeps me honest to do my strength training and sprints every day.Dr. Mark Cucuzzella, Professor of Family Medicine, West Virginia University School of Medicine, author of "Run For Your Life" 2008Dr's Billat and Edwards have put together a book that combines the best of sports science and in the field research. It's refreshing to see a book on running that connects the dots, delves deep into the science, but still bases its recommendations on how we should run as nature intended.Barry Murray M.Sci, Faculty at Munster Technological University, CEO of Optimum Nutrition For Sport, Irish National endurance runner Veronique Billat is one of the most innovative and important researchers currently active in determining the science of optimum training. I have found her work to be useful for boosting the performances of runners not only in the marathon, but all the way down to the 800-any distance at which aerobic capability matters. My runners swear by it. Richard A. Lovett, Coach, Team Red Lizard, Portland Oregon and Co-author of Alberto Salazar's Guide to Road Racing"Dr's. Billat and Edwards did an excellent job writing this book. Dr. Edwards has been a huge help getting Brenda back to top running form. You don't have to be an elite runner to train like one. Brenda has benefited from the 30-30 workouts described in the book. I would recommend this amazing book to anyone looking to take their fitness to the next level."Carlos Handler, Coach, Brenda Martinez USA Olympic Track & Field Runner*
