

Chinese Engine

This book presents the proceedings of the 17th Chinese Intelligent Systems Conference, held in Fuzhou, China, on Oct 16-17, 2021. It focuses on new theoretical results and techniques in the field of intelligent systems and control. This is achieved by providing in-depth study on a number of major topics such as Multi-Agent Systems, Complex Networks, Intelligent Robots, Complex System Theory and Swarm Behavior, Event-Triggered Control and Data-Driven Control, Robust and Adaptive Control, Big Data and Brain Science, Process Control, Intelligent Sensor and Detection Technology, Deep learning and Learning Control Guidance, Navigation and Control of Flight Vehicles and so on. The book is particularly suited for readers who are interested in learning intelligent system and control and artificial intelligence. The book can benefit researchers, engineers, and graduate students.

China's rise to global economic and strategic eminence, with the potential for achieving pre-eminence in the greater Asian region, is one of the defining characteristics of the post-Cold War period. This work offers a basic understanding of the military-strategic basis and trajectory of a rising China, provides background, and outlines current and future issues concerning China's rise in strategic-military influence. The next decade may witness China's assertion of military or strategic pressure on Japan, the Korean Peninsula, India, the South China Sea, the Taiwan Strait, Central Asia, or even on behalf of future allies in Africa and Latin America. While conflict is not a foregone conclusion, as indicated by China's increasing participation in many benign international organizations, it is a fact that China's leadership will pursue its interests as it sees them, which may not always coincide with those of the United States, its friends, and allies. Until now, no single volume has existed that provides an authoritative, comprehensive, and concise description of China's evolving geo-strategy or of how China is transforming its military to carry this strategy. Fisher examines how China's People's Liberation Army (PLA) remains critical to the existence of the Chinese Communist government and looks at China's political and military actions designed to protect its expanded strategic interests in both the Asia-Pacific and Central to Near-Asian regions. Using open sources, including over a decade of unique interview sources, Fisher documents China's efforts to build a larger nuclear force that may soon be protected by missile defenses, modern high technology systems for space, air, and naval forces, and China is now beginning to assemble naval, air, and ground forces for future power projection missions. His work also examines how the United States and other governments simultaneously seek greater engagement with China on strategic concerns, while hedging against its rising power. Although China faces both internal and external constraints on its rise to global eminence, it cannot be denied that China's government is pursuing a far-reaching strategic agenda.

China's Military Modernization: Building for Regional and Global Reach

[After payment, write to & get a FREE-of-charge, unprotected true-PDF from: Sales@ChineseStandard.net] This Part of GB/T 38750 specifies the energy efficiency evaluating specifications and measurement methods for light-duty vehicle gasoline engines and general gasoline engines below 30 kW. This Part applies to light-duty vehicle (including light passenger vehicle and light commercial vehicle) gasoline engines and general gasoline engines below 30 kW.

Copyright and International Negotiations provides a historical study of the development of Chinese copyright law in terms of China's contemporary political economy and the impact that international copyright law has had. The analysis shows how China's copyright system is intertwined with censorship and international copyright law and how this has affected freedom of expression. China still enforces an old censorship regime that clamps down on free expression despite a modern system of copyright rules which should function as an engine of free expression. The book explores the development and architecture of Chinese copyright law in parallel with international copyright law, clarifies China's nuanced patterns of the control of free expression through copyright law, and identifies a breakthrough for neutralising the impact of China's censorship policies through copyright law.

As China is poised to become a global economic force, its leadership is on the brink of imminent and potentially sweeping change. With Deng Xiaoping's demise seemingly at hand, the inevitable redistribution of power within this vast land has become a crucial concern for China and the world alike. How will China cope with this changing of the guard? Will a centralized government remain, or will the country break apart? This comprehensive volume brings specialists from East and West together to assess the key issue of regionalism and its effect on shifting power in the PRC. Focusing specifically on the pivotal role of the People's Liberation Army, the contributors address a wide range of topics, including economic reform, the possible reprise of warlordism, and regional security, and they present a variety of case studies

"As the world hurtles towards environmental oblivion, China is leading the charge. The nation's CO2 emissions are more than twice those of the US with a GDP just two-thirds as large. China leads the world in renewable energy yet it is building new coal-fired power plants faster than renewables. The country's lakes, rivers, and farmlands are severely polluted yet China's police state can't suppress pollution, even from its own industries. This is the first book to explain these contradictions. Richard Smith explains how the country's bureaucratic rulers are driven by nationalist-industrialist tendencies that are even more powerful than the drive for profit under 'normal' capitalism. In their race to overtake the US they must prioritise hyper-growth over the environment, even if this ends in climate collapse and eco-suicide. Smith contends that nothing short of drastic shutdowns and the scaling back of polluting industries, especially in China and the US, will suffice to slash greenhouse gas emissions enough to prevent climate catastrophe."-

Straight from the China CEO. Advice on leading operations in the world's fastest-moving, highest stakes market. 25 top executives leading high-profile multinational companies in China, as well as seasoned and respected China-based consultants, give their front-line advice on succeeding in this market. Soaring spending power among the world's largest consumer population, radical digital transformation creating a cash-less, 'always on' society, severe generation gaps – these are just some of the challenges facing China since 2006, the year when the first volume of China CEO was published. And these are three of the main reasons the authors have again teamed up to put together this second volume – collecting entirely new content via in-depth, exclusive interviews with the heads of 25 high-profile CEOs of multinational companies in China, as well as a number of highly respected consultants who have built their careers by delivering advice on succeeding in the market. In this book, CEO pressing issues faced by business leaders in China now, including: fierce competition from strong, globalized Chinese companies; working with the powerful, complex Chinese government; and successfully attracting the nation's wealthy but fickle and tech-savvy domestic consumers. Top executives and consultants also divulge their secrets for keeping up with China's astoundingly broad and rapid digital transformation in which the nation is now leading the world in mobile payment, facial and voice recognition. They also discuss trends including localization of top positions in China, the rise of female top executives in the country and the challenge of attracting the nation's highly international, purpose driven millennials. Hear directly from the China CEOs of: ABB, AB InBev, Bayer, Bosch, Carrefour, Coca-Cola, IKEA, Korn Ferry, Lego, L'Oréal, NIIT, Mango, Manulife, Marriott, Maserati, Microsoft, Philips, Scania, SAP, Sony, Standard Chartered, Tata, Udacity, Victoria's Secret, and Volvo.

seasoned China experts at McKinsey & Co, Economist Group, and more Written in a practical, easy-to-read format ideal for busy professionals, educators, and students China CEO II: Voices of Experience from 25 Top Executives Leading MNCs in China is an invaluable resource for any professionals seeking to work in or with China, or executives expanding their responsibilities in China, and those involved in international business, finance or executive programmes.

Intellectual Property Law and the Diffusion of Military Technology

The National Review, China

With which are incorporated "The China directory" and "The Hongkong directory and Hong list for the Far East" ...

In an era when knowledge can travel with astonishing speed, the need for analysis of intellectual property (IP) law—and its focus on patents, trade secrets, trademarks, and issues of copyright—has never been greater. But as Robert M. Farley and Davida H. Isaacs stress in Patents for Power, we have long overlooked critical ties between IP law and one area of worldwide concern: military technology. This deft blend of case studies, theoretical analyses, and policy advice reveals the fundamental role of IP law in shaping the development of military equipment and weaponry. The book probes two major issues: the effect of IP law on innovation itself and the effect of IP law on the international diffusion, or sharing, of technology. Discussing a range of inventions, from the AK-47 rifle to the B-29 Superfortress bomber to the MQ-1 Predator drone, the authors show how IP systems (or their lack) have impacted domestic and international relations across a number of countries, including the United States, Russia, China, and South Korea. The study finds, among other things, that the U.S. may encourage industrial espionage like cyberwarfare, increased state uptake of IP law is helping to establish international standards for IP protection. This clear-eyed approach to law and national security is thus essential for anyone interested in history, political science, and legal studies.

Internal Combustion Engine Installation of a Small Engine on a Chinese Tricycle

JT, JT/T: JTT - Product Catalog, Translated English of Chinese Standard. (JT, JT/T: JTT)

(2nd Edition: July 6, 2012) In The Chinese Dream, a groundbreaking book about the rising middle class in China, Forbes columnist and China expert Helen Wang challenges us to recognize that some of our fears about China are grossly misplaced. As a result of China's new capitalist paradigm, a burgeoning middle class-calculated to reach 800 million within the next fifteen years-is jumping aboard the consumerism train and riding it for all it's worth-a reality that may provide the answer to America's economic woes. And with China's increasing urbanization and top-down governmental approach, it now faces increasing energy, environmental, and health problems-problems that the U.S. can help solve. Through timely interviews, personal stories, and a historical perspective, China-born Wang takes us into the world of the Chinese entrepreneurial middle class to show how a growing global mindset and the realization of unity in diversity may ultimately provide the way to creating a saner, safer world for all.

This book constitutes the proceedings of the 15 Chinese Lexical Semantics Workshop, CLSW 2014, held in Macau, China, in June 2014. The 41 regular and 3 short papers included in this volume were carefully reviewed and selected from 139 submissions. They are organized in topical sections named: lexical semantics; applications on natural language processing; and lexical resources and corpus linguistics.
