countries accelerating to reach a consensus on the role that atmospheric emissions and acidic precipitation play in the environment, publication of this series is timely. The editors thank the contributors to this volume for their efforts in describing a wide array of atmospheric topics, all of which are important to an understanding of the acidic precipitation issue. Drugs and Sundries

R.B. Woodward, Professor of Science at Harvard University, who died in July 1979, was generally considered to be the greatest organic chemist of modern times. He was one of the founders of Tetrahedron and Tetrahedron Letters and this volume, containing papers from over 50 of the world's leading organic chemists, is dedicated to his memory. The contents cover all areas of modern organic chemistry and therefore present a synopsis of current research in this area of science.

The Oil & Colour Trades Journal

Chemical News and Journal of Industrial Science

This joint publication of the British Medical Association and the Royal Pharmaceutical Society aims to provide doctors, pharmacists and other healthcare professionals with a quick reference guide to current information about the use of medicines, including selection, prescribing, dispensing and administration. Drugs that are generally prescribed in the UK are included and those that are considered less suitable for prescribing are clearly identified.

Diabetes Literature Index, by Authors and by Keywords in the Title

This book provides a clear and readable introduction to the central concepts of clinical neuroscience. The first part of the book deals with fundamental areas of neuroscience required for a sound understanding of brain disease. This is followed by an account of the neurobiology of the most common and important brain diseases of the western world (stroke, epilepsy, Alzheimer's disease, Parkinson's disease and multiple sclerosis). The book is in the same general style as the successful Crossman: Neuronatomy with extensive colour illustrations. Short, affordable and readable introductory level text in the same style as Crossman: Neuroanatomy. Assumes little previous neuroscience knowledge. Explains fundamental concepts without overwhelming detail Focuses on clinically relevant material. Includes the most common and important neurological disorders.
