MORE THAN MEN He was a potent package... And he moved into the ranch next door. From across the range, John Jarvis's denim-clad swagger was downright sexy. Up close he was more man, more cowboy than Paige Kenton could have dreamed. But strange things—unexplainable things, too—started to happen the moment John came to town. Things he wouldn't discuss. Only the way he made Paige feel frightened her more. His caress seared her flesh with the intensity of a branding iron. Could she have imagined his touch was so heated, so electrified? Or could his mysterious power have been more than skin-deep...?

Steel Arbitration

By applying their abundant natural resources to ironmaking early in the eighteenth century, Americans soon made themselves felt in world markets. After the Revolution, ironmakers supplied the materials necessary to the building of American industry, pushing the fuel efficiency and productivity of their furnaces far ahead of their European rivals. In American Iron, 1607-1900, Robert B. Gordon draws on recent archaeological findings as well as archival research to present an ambitious, comprehensive survey of iron technology in America from the colonial period to the industry's demise at about the turn of the twentieth century. Closely examining the techniques -- the "hows" -- of ironmaking in its various forms, Gordon offers new interpretations of labor, innovation, and product quality in ironmaking, along with references to the industry's environmental consequences. He establishes the high level of skills required to ensure efficient and safe operation of furnaces and to improve the quality of iron product. By mastering founding, fining, puddling, or bloom smelting, ironworkers gained a degree of control over their lives not easily attained by others.

Court of Appeals: State of New York

After returning home after 15 years in Alaska the author found her ex-husband back home very ill with AIDS. The story told is of the author's time spent caring for him after the devastating diagnosis of AIDS. It is told through her journal entries relating his struggle, and how their relationship evolved and seemed cast into something planned ahead of time by a higher power. The personal entries weave dreams, premonitions, prayers, and losses, winding them around their memories to shape their very own world and reason for existence in the pages of this book. It is said to be both moving and hard to lay down.

Reporter Suzanna Molloy is looking for the story that will change her world, and she's pretty sure that story is Dr. Daniel Crompton, a gorgeous, grumpy genius, obsessively working in his lab on something secret. Suzanna loves secrets, and she's not averse to gorgeous geniuses, either, so a trip to Compton Labs is a moral imperative. Daniel Compton is working on a project he knows will change the world. Instead, a lab explosion changes him, giving him fantastic powers. But with great powers come great enemies, and now he's on the run with Susanna, stuck with a power that's hard to control and a woman who's hard to resist.

The Plurality of Power

Annual Report of the Commissioner of Labor

How do people experience power within capitalist societies? Research presented here explicitly addresses the notion of power, which encompasses both productive and oppressive forms of power and acknowledges that nuanced and multiple relations can exist in combination with binary dynamics such as domination and resistance. This volume addresses gaps in linking past and present power relationships engendered by capitalism and in conducting historical archaeology as well as The Plurality of Power: Industrial Capitalism and the Nineteenth-Century Company Town of Fayette, Michigan, exploring the distribution of power within American industrial capitalism through a case study of a company town. Issues surrounding

agency are explored in regard to three heuristic categories of power. In the first category, the company imposed a structural, class-based power that is most visible in hierarchical differences in pay and housing, as well as consumer. The second category addresses disciplinary activities surrounding health and the human body, as observed in the built environment, medical artifacts, disposal patterns of industrial waste, incidence of intestinal parasites, and unequal access to health care. This ensemble of power relations is heterarchical and entwined with non-economic capital (social, symbolic, and cultural). Different groups drew upon different forms of capital to bolster social status and express identity both within and apart from the hierarchy. The goal in combining these diverse ideas is to explore the plurality of power relationships in past industries and to assert their relevance in the anthropology of capitalism.

Hiv Caregiver Journal

Fifteenth Census of the United States

While historians have given ample attention to stories of entrepreneurship, invention, and labor conflict, they have told us little about actual work-places and how people worked. Workers seldom wrote about their daily employment. However, they did leave behind their tools, products, shops, and factories as well as the surrounding industrial landscapes and communities. In this book, Gordon and Malone look at the industrialization of North America from the perspective of the industrial archaeologist. Using material evidence from such varied sites as Indian steatite quarries, automobile plants, and coal mines, they examine manufacturing technology, transportation systems, and the effects of industrialization on the land. Their research greatly expands our understanding of industry and focuses attention on the contributions of anonymous artisans whose skills shaped our industrial heritage.
