

Cities Roundtable Clc

Cities around the world are becoming increasingly popular as economic powerhouses and magnets for migrants from rural and suburban areas. All big cities in First and Third World countries as well as emerging markets such as New York, London, Tokyo, Paris, Shanghai, Hong Kong, Singapore, New Delhi, Jakarta etc. have to cope with high population density and serious challenges such as air pollution or traffic congestion. How do we pack more people into big cities and yet continue to realise a high quality of life? How do we plan, create and manage 'good cities' which are safe, spacious, green, connected, fair and resilient? How can cities create economic wealth while still fulfilling the 'vision of sustaining our "Green Planet"?' What are best practice designs and innovative technical smart city solutions which could be leveraged to tackle these challenges and how can they be successfully commercialised? These are some of the questions the reader addresses from a multi-disciplinary perspective with special reference to Singapore whose development from regional entrepôt to First World Metropolis continues to impress business and societal leaders around the world. The book's contents are broadly structured according to the following aspects: (i) definition and taxonomy of innovative & sustainable cities, including its core characteristics and how they create value in terms of innovativeness and sustainability; (ii) governance, planning and selected design principles of innovative & sustainable cities and how they pan out with regard to livability and sustainability; and (iii) in-depth study of selected smart city dimensions such as governance, clustering, connectivity, mobility, ageing, water, sports, and safety.

This book contains all refereed papers that were accepted to the second edition of the Asia-Pacific conference on « Complex Systems Design & Management Asia» (CSD&M Asia 2016) that took place in Singapore from February 24 to February 26, 2016 (Website: <http://www.2016.csdm-asia.net/>). These proceedings cover the most recent trends in the emerging field of Complex Systems, both from an academic and a professional perspective. A special focus is put on Smart Nations: Designing and Sustaining. The CSD&M Asia 2016 conference is organized under the guidance of the Singapore division of the Center of Excellence on Systems Architecture, Management, Economy and Strategy (CESAMES) – Legal address: C.E.S.A.M.E.S. Singapore – 16 Raffles Quay – #38-03 Hong Leong Building – Singapore 048881 (website : <http://www.cesames.net/en> – email: contact@cesames.net).

Paying the Price is a superhero romance thriller, featuring superheroes who realize they are regular people. Han Jackson is being haunted by his past and is forced to look for help in the last place he could imagine: fellow superhero Adrian Kane. Han and Adrian, who previously had a tentative-hate relationship, form a tentative friendship spiced at the edges with a love that is most unexpected, and surprises everybody. When Han gets in trouble again and is imprisoned for murder, Adrian refuses to give up on him. Will Adrian's love find a way out where there is none? Do the pair fight their way together through sheer stubbornness or does the universe defeat them?

In France as elsewhere in recent years, legislative debates over single-parent households, same-sex unions, new reproductive technologies, transsexuality, and other challenges to long-held assumptions about the structure of family and kinship relations have been deeply divisive. What strikes many as uniquely French, however, is the extent to which many of these discussions—whether in legislative chambers, courtrooms, or the mass media—have been conducted in the frequently abstract vocabularies of anthropology and psychoanalysis. In this highly original book, Camille Robcis seeks to explain why and how academic discourses on kinship have intersected and overlapped with political debates on the family—and on the nature of French republicanism itself. She focuses on the theories of Claude Lévi-Strauss and Jacques Lacan, both of whom highlighted the interdependence of the sexual and the social by positing a direct correlation between kinship and socialization. Robcis traces how their ideas gained recognition not only from French social scientists but also from legislators and politicians who relied on some of the most obscure and difficult concepts of structuralism to enact a series of laws concerning the family. Lévi-Strauss and Lacan constructed the heterosexual family as a universal trope for social and psychic integration, and this understanding of the family at the root of intersubjectivity coincided with the role that the family has played in modern French law and public policy. The Law of Kinship contributes to larger conversations about the particularities of French political culture, the nature of sexual difference, and the problem of reading and interpretation in intellectual history.

Designed to complement every introductory library reference course, this is the perfect text for students and librarians looking to expand their personal reference knowledge, teaching failsafe methods for identifying important materials by matching specific types of questions to the best available sources, regardless of format. Guided by a national advisory board of educators and practitioners, this thoroughly updated text expertly keeps up with new technologies and practices while remaining grounded in the basics of reference work. Chapters on fundamental concepts, major reference sources, and special topics provide a solid foundation; the text also offers fresh insight on core issues, including ethics, readers' advisory, information literacy, and other key aspects of reference librarianship;selecting and evaluating reference materials, with strategies for keeping up to date;assessing and improving reference services;guidance on conducting reference interviews with a range of different library users, including children and young adults;a new discussion of reference as programming;important special reference topics such as Google search, 24/7 reference, and virtual

reference; anddelivering reference services across multiple platforms As librarians experience a changing climate for all information services professionals, in this book Cassell and Hiremuth provide the tools needed to manage the ebb and flow of changing reference services in today's libraries.

Arguing that a strong union movement is needed now more than ever, this book outlines the major changes unions need to make to revitalize the U.S. labor movement.

Managing the growth of urban traffic is vital for improving the liveability of our cities. This report examines how governments can encourage citizens to use alternatives to private cars in order to reduce car dependency, regardless of how they are powered or who drives them. The report analyses fiscal policies and other instruments for managing urban traffic and correcting current policy biases that favour automobile travel over more sustainable and affordable transport options. It also reviews international experience in co-ordinating transport planning with land-use development and in allocating space to walking and cycling in order to make transport more efficient and streets less congested.

Lessons from Seoul and Singapore

Directory of Corporate Counsel, 2018 Mid-Year Edition (2 vols)

A Chance of a Lifetime details Singapore's history of urban planning, and Lee Kuan Yew's role in the development of the modern city-state.

This report is an important resource to explore critical and emerging policy opportunities to realize urban sustainability for the Asian and Pacific region. It informs policies and actions from a sustainable development perspective, putting cities at the centre of development policy debates. It identifies future policy pathways for urban decision-makers to reimagine the built and natural environments in Asian and Pacific cities and offers policy solutions across different types of cities to achieve the global development agendas. The solutions address four major development challenges – natural resource management, climate change, disaster risk and inequalities – through a focus on the key enablers to accelerate the achievement of the 2030 Agenda.

In its 114th year, Billboard remains the world's premier weekly music publication and a diverse digital, events, brand, content and data licensing platform. Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music, video, gaming, media, digital and mobile entertainment issues and trends.

This publication is a result of a 2-year innovative, exploratory, and reflective study of cities as unique urban spaces that support life, work, and play. It responds to major issues that affect the quality of life of urban residents. This publication offers practical ways on how urban managers, urban practitioners, businesspeople, and citizens can engage to make cities more livable by building on their distinctive physical, social, cultural, and economic characteristics. With the adoption of the Sustainable Development Goals by the United Nations, the book comes at the right time to offer integrated urban development solutions that can translate global development commitments into urban-level actions to achieve livable cities.

News headlines warn of rivalries and competing nations across Asia and the Pacific, even as powerful new cross-border relations form as never before. This book looks behind the Asia-Pacific curtain: at the new forms of social, economic, and political integration taking place through a global capitalism that is rife with contradictions, inequality, and crisis. We are moved beyond traditional conceptualizations of the inter-state system with its nation-state competition as the core organizing principle of world capitalism and the principal institutional framework that shapes the makeup of global social forces. These important studies examine and debate over how there is a growing transnationality of material (economic) relations in the global era, as well as an emerging transnationality of many social and class relations. How does transnational capitalist class fractions, new middle strata, and labor undergird globalization in Asia and Oceania? How have states and institutions become entwined with such processes? This book provides insight into a field of dynamic change.

Focusing on ways in which cultural nationalism has influenced both the production and critical reception of texts, Salgado presents a detailed analysis of eight leading Sri Lankan writers - Michael Ondaatje, Ramesh Gunasekera, Shyam Selvadurai, A. Sivanandan, Jean Arasanayagam, Carl Muller, James Goonewardene and Punyakante Wijenaike ¶ to rigorously challenge the theoretical, cultural and political assumptions that pit [insider] against [outsider], [resident] against [migrant] and the [authentic] against the [alien]. By interrogating the discourses of territoriality and boundary marking that have come into prominence since the start of the civil war, Salgado works to define a more nuanced and sensitive critical framework that actively reclaims marginalized voices and draws upon recent studies in migration and the diaspora to reconfigure the Sri Lankan critical terrain.

Combating climate change will increasingly impact on production industries and the workers they employ as production changes and consumption is targeted. Yet research has largely ignored labour and its responses. This book brings together sociologists, psychologists, political scientists, historians, economists, and representatives from international and local unions based in Australia, Brazil, South Africa, Taiwan, Spain, Sweden, the UK and the USA. Together they open up a new area of research: Environmental Labour Studies. The authors ask what kind of environmental policies are unions in different countries and sectors developing. How do they aim to reconcile the protection of jobs with the protection of the environment? What are the forms of cooperation developing between trade unions and environmental movements, especially the so-called Red-Green alliances? Under what conditions are unions striving to create climate change policies that transcend the economic system? Where are they trying to find solutions that they see as possible within the present socio-economic conditions? What are the theoretical and practical implications of trade unions' "Just Transition", and the problems and perspectives of "Green Jobs"? The authors also explore how food workers' rights would contribute to low carbon agriculture, the role workers' identities play in union climate change policies, and the difficulties of creating solidarity between unions across the global North and South. Trade Unions in the Green Economy opens the climate change debate to academics and trade unionists from a range of disciplines in the fields of labour studies, environmental politics, environmental management, and climate change policy. It will also be useful for environmental organisations, trade unions, business, and politicians.

This report presents an overview of trends in OECD countries with the objective to identify successes and failure that could inform national Chinese policy-makers in their preparation of an Urbanisation Strategy.

Often when water is thought about, the focus is on problems, challenges, and crises. In November 2012, a group of researchers came together at Queen's University with the idea that it is more illuminating and constructive to think about water as an opportunity. Water as a Social Opportunity conveys the idea that the ways in which society responds to water-related challenges has the potential to yield a variety of positive outcomes not just for water, or the economy, but for society more broadly. Contributors consider water issues across Canada from this original perspective, and suggest this concept as a basis for developing a long-overdue national water strategy in Canada.
