“ Roxane Gay is so great at weaving the intimate and personal with what is most bewildering and upsetting at this moment in culture. She is always looking, always thinking, always passionate, always careful, always right there. ” — Sheila Heti, author of How Should a Person Be? A New York Times Bestseller Best Book of the Year: NPR • Boston Globe • Newsweek • Time Out New York • Oprah.com • Miami Herald • Book Riot • Buzz Feed • Globe and Mail (Toronto) • The Root • Shelf Awareness A collection of essays spanning politics, criticism, and feminism from one of the most-watched cultural observers of her generation In these funny and insightful essays, Gay takes us through the journey of her evolution as a woman (Sweet Valley High) of color (The Help) while also taking readers on a ride through culture of the last few years (Girls, Django in Chains) and commenting on the state of feminism today (abortion, Chris Brown). The portrait that emerges is not only one of an incredibly insightful woman continually growing to understand herself and our society, but also one of our culture. Bad Feminist is a sharp, funny, and spot-on look at the ways in which the culture we consume becomes who we are, and an inspiring call-to-arms of all the ways we still need to do better, coming from one of our most interesting and important cultural critics.

What is the difference between a performance of Beethoven’s Fifth Symphony and the symphony itself? What does it mean for musicians to be faithful to the works they perform? To answer such questions, Lydia Goehr combines philosophical and historical methods of enquiry. Finding Anglo-American philosophy inadequate for the task, she shows that a historical perspective is indispensable to a full understanding of musical ontology. Goehr examines the concepts and assumptions behind the practice of classical music in the nineteenth century and demonstrates how different they were from those of previous centuries. She rejects the finding that the concept of a musical work emerged in the sixteenth century, placing its emergence instead around 1800. She describes how the concept of a work then came to define the norms, expectations, and behaviour that we now associate with classical music. Out of the historical thesis Goehr draws philosophical conclusions about the normative functions of concepts and ideals. She also addresses current debates among conductors, early music performers, and avant-gardists.

*A masterwork of suspense from the #1 New York Times bestselling author. Tina Evans can think of no better time for a fresh start. It's been a year of unbelievable heartache since her son Danny's death. Now the Vegas show that she directed is about to premiere, so she vows to put her grief behind her. Only there is a message for Tina, scrawled on the chalkboard in Danny's room. Two words that will send Tina on a terrifying journey...NOT DEAD.*

*Electrifying investigation of White House lies about the assassination of Osama bin Laden In 2011, an elite group of US Navy SEALs stormed an enclosure in the Pakistani city of Abbottabad and killed Osama bin Laden, the man the United States had begun chasing before the devastating attacks of 9/11. The news did much to boost President Obama’s first term and played a major part in his reelection victory of the following year. But much of the story of that night, as presented to the world, was incomplete, or a lie. The evidence of what actually went on remains hidden. At the same time, the full story of the United States’ involvement in the Syrian civil war has been kept behind a diplomatic curtain, concealed by doublespeak. It is a policy of obfuscation that has compelled the White House to turn a blind eye to Turkey’s involvement in supporting ISIS and its predecessors in Syria. This investigation, which began as a series of essays in the London Review of Books, has ignited a firestorm of controversy in the world media. In his introduction, Hersh asks what will be the legacy of Obama’s time in office. Was it an era of “change we can believe in” or a season of lies and compromises that continued George W. Bush’s misconceived War on Terror? How did he lose the confidence of the general in charge of America’s forces who acted in direct contradiction to the White House? What else do we not know?*

“Comprehensive, readable, and replete with current, useful examples, this book provides a much-needed explanation of how to be a critical consumer of the scientific claims we encounter in our everyday lives.” —April Cordero Maskiewicz, Department of Biology, Point Loma Nazarene University “Seethaler’s book helps the reader look inside the workings of science and gain a deeper understanding of the pathway that is followed by a scientific finding—from its beginnings in a research lab to its appearance on the nightly news.” —Jim Slotta, Ontario Institute for Studies in Education, University of Toronto “How I wish science was taught this way! Seethaler builds skills for critical thinking and evaluation. The book is rich with examples that not only illustrate her points beautifully, they also make it very interesting and fun to read.” —Julia R. Brown, Director, Targacept, Inc. Don’t Get Hoodwinked! Make Sense of Health and Science News...and Make Smarter Decisions! Every day, there’s a new scientific or health controversy. And every day, it seems as if there’s a new study that contradicts what you heard yesterday. What’s really going on? Who’s telling the truth? Who’s faking it? What do scientists actually know—and what don’t they know? This book will help you cut through the confusion and make sense of it all—even if you’ve never taken a science class! Leading science educator and journalist Dr. Sherry Seethaler reveals how science and health research really work...how to put scientific claims in context and understand the real tradeoffs involved...tell quality research from junk science...discover when someone’s deliberately trying to fool you...and find more information you can trust! Nobody knows what new controversy will erupt tomorrow. But one thing’s for certain: With this book, you’ll know how to figure out the real deal—and make smarter decisions for yourself and your family! Watch the news, and you’ll be overwhelmed by snippets of badly presented science: information that’s incomplete, confusing, contradictory, out-of-context, wrong, or flat-out dishonest. Defend yourself! Dr. Sherry Seethaler gives you a powerful arsenal of tools for making sense of science. You’ll learn how to think more sensibly about everything from mad cow disease to global warming—and how to make better science-related decisions in both your personal life and as a citizen. You’ll begin by understanding how science really works and progresses, and why scientists sometimes disagree. Seethaler helps you assess the possible biases of those who make scientific claims in the media, and place scientific issues in appropriate context, so you can intelligently assess tradeoffs. You’ll learn how to determine whether a new study is really meaningful; uncover the difference between cause and coincidence; figure out which statistics mean something, and which don’t. Seethaler reveals the tricks self-interested players use to mislead and confuse you, and points you to sources of information you can actually rely upon. Her many examples range from genetic engineering of crops to drug treatments for depression...but the techniques she teaches you will be invaluable in understanding any scientific controversy, in any area of science or health. ^ Potions, plots, and personalities: How science progresses, and why scientists sometimes disagree ^ Is it “cause” or merely coincidence? How to tell compelling evidence from a “good story” ^ There are always tradeoffs: How to put science and health claims in context, and understand their real implications ^ All the tricks experts use to fool you, exposed! How to recognize lies, “truthiness,” or pseudo-expertise

A Quick Guide to Cancer Epidemiology is an ideal addition to Springer Briefs in Cancer Research. The Brief provides core concepts in cancer epidemiology and also gives a snapshot of the epidemiology of seventeen human cancers. The Brief aims to provide-with quantitative focus-estimates of the global burden of neoplasms, of recent and likely future trends, distribution, causes and strategies for prevention for major groups of cancers.

Finally, the Brief will give an overview of severals factors that cause cancer including dietary factors, tobacco smoking, obesity and alcohol consumption.

Kinship Between Life and Death

The Craft of Research, Third Edition

The Israel Lobby,” by John J. Mearsheimer of the University of Chicago and Stephen M. Walt of Harvard’s John F. Kennedy School of Government, was one of the most controversial articles in recent memory. Originally published in the London Review of Books in March 2006, it provoked both howls of outrage and cheers of gratitude for challenging what had been a taboo issue in America: the impact of the Israel lobby on U.S. foreign policy. Now in a work of major importance, Mearsheimer and Walt deepen and expand their argument and confront recent developments in Lebanon and Iran. They describe the remarkable level of material and diplomatic support that the United States provides to Israel and argues that this support cannot be fully explained on either strategic or moral grounds. This exceptional relationship is due largely to the political influence of a loose coalition of individuals and organizations that actively work to shape U.S. foreign policy in a pro-Israel direction. Mearsheimer and Walt provocatively contend that the lobby has a far-reaching impact on America’s posture throughout the Middle East—in Iraq, Iran, Lebanon, and toward the Israeli-Palestinian conflict—and the policies it has encouraged are in neither America’s national interest nor Israel’s long-term interest. The lobby’s influence also affects America’s relationship with important allies and increases dangers that all states face from global jihadist terror. Writing in The New York Review of Books, Michael Massing declared, “Not since Foreign Affairs magazine published Samuel Huntington’s ‘ The Clash of Civilizations?’ in 1993 has an academic essay detonated with such force.” The publication of The Israel Lobby and U.S. Foreign Policy is certain to widen the debate and to be one of the most talked-about books in foreign policy.

This collection of articles addresses the most modern forms of loss reserving methodology: granular models and machine learning models. New methodologies come with questions about their applicability. These questions are discussed in one article, which focuses on the relative merits of granular and machine learning models. Others illustrate applications with real-world data. The examples include neural networks, which, though well known in some disciplines, have previously been limited in the actuarial literature. This volume expands on that literature, with specific attention to their application to loss reserving. For example, one of the articles introduces the application of neural networks of the gated recurrent unit form to the actuarial literature, whereas another uses a penalized neural network. Neural networks are not the only form of machine learning, and two other papers outline applications of gradient boosting and regression trees respectively. Both articles construct loss reserves at the individual claim level so that these models resemble granular models. One of these articles provides a practical application of the model to claim watching, the action of monitoring claim development and anticipating major features. Such watching can be used as an early warning system or for other administrative purposes. Overall, this volume is an extremely useful addition to the libraries of those working at the loss reserving frontier.

*With more than 400,000 copies now in print, The Craft of Research is the unrivaled resource for researchers at every level, from first-year undergraduates to research reporters at corporations and government offices. Seasoned researchers and educators Gregory G. Colomb and Joseph M. Williams present an updated third edition of their classic handbook, whose first and second editions were written in collaboration with the late Wayne C. Booth. The Craft of Research explains how to build an argument that motivates readers to accept a claim; how to anticipate the reservations of readers and to respond to them appropriately; and how to create introductions and conclusions that answer that most demanding question, “So what?” The third edition includes an expanded discussion of the essential early stages of a research task: planning and drafting a paper. The authors have revised and fully updated their section on electronic research, emphasizing the need to distinguish between trustworthy sources (such as those found in libraries) and less reliable sources found with a quick Web search. A chapter on warrants has also been thoroughly reviewed to make this difficult subject easier for researchers Throughout, the authors have preserved the amiable tone, the reliable voice, and the sense of directness that have made this book indispensable for anyone undertaking a research project.*

*A New York Times and Sunday Times bestseller | A New York Times Book Review Editors' Choice Named a best book of the year by The Economist | Financial Times | New Statesman | The Telegraph "[Putin's People] will surely now become the definitive account of the rise of Putin and Putinism." —Anne Applebaum, The Atlantic "This riveting, immaculately researched book is arguably the best single volume written about Putin, the people around him and perhaps even about contemporary Russia itself in the past three decades." —Peter Frankopan, Financial Times Interference in American elections. The sponsorship of extremist politics in Europe. War in Ukraine. In recent years, Vladimir Putin’s Russia has waged a concerted campaign to expand its influence and undermine Western institutions. But how and why did all this come about, and who has orchestrated it? In Putin’s People, the investigative journalist and former Moscow correspondent Catherine Belton reveals the untold story of how Vladimir Putin and the small group of KGB men surrounding him rose to power and looted their country. Delving deep into the workings of Putin’s Kremlin, Belton accesses key inside players to reveal how Putin replaced the freewheeling tycoons of the Yeltsin era with a new generation of loyal oligarchs, who in turn subverted Russia’s economy and legal system and extended the Kremlin’s reach into the United States and Europe. The result is a chilling and revelatory exposé of the KGB’s revanche—a story that begins in the murk of the Soviet collapse, when networks of operatives were able to siphon billions of dollars out of state enterprises and move their spoils into the West. Putin and his allies subsequently completed the agenda, reasserting Russian power while taking control of the economy for themselves, suppressing independent voices, and launching covert influence operations abroad. Ranging from Moscow and London to Switzerland and Brooklyn’s Brighton Beach—and assembling a colorful cast of characters to match—Putin’s People is the definitive account of how hopes for the new Russia went astray, with stark consequences for its inhabitants and, increasingly, the world.*

The transition from President Donald J. Trump to President Joseph R. Biden Jr. stands as one of the most dangerous periods in American history. But as # 1 internationally bestselling author Bob Woodward and acclaimed reporter Robert Costa reveal for the first time, it was far more than just a domestic political crisis. Woodward and Costa interviewed more than 200 people at the center of the turmoil, resulting in more than 6,000 pages of transcripts—and a spellbinding and definitive portrait of a nation on the brink. This classic study of Washington takes readers deep inside the Trump White House, the Biden White House, the 2020 campaign, and the Pentagon and Congress, with vivid, eyewitness accounts of what really happened. Peril is supplemented throughout with never-before-seen material from secret orders, transcripts of confidential calls, diaries, emails, meeting notes and other personal and government records, making for an unparalleled history. It is also the first inside look at Biden’s presidency as he faces the challenges of a lifetime: the continuing deadly pandemic and millions of Americans facing soul-crushing economic pain, all the while navigating a bitter and disabling partisan divide, a world rife with threats, and the hovering, dark shadow of the former president. “We have much to do in this winter of peril,” Biden declared at his inauguration, an event marked by a nerve-wracking security alert and the threat of domestic terrorism. Peril is the extraordinary story of the end of one presidency and the beginning of another, and represents the culmination of Bob Woodward’s news-making trilogy on the Trump presidency, along with Fear and Rage. And it is the beginning of a collaboration with fellow Washington Post reporter Robert Costa that will remind readers of Woodward’s coverage, with Carl Bernstein, of President Richard M. Nixon’s final days.

"Unsettled is a remarkable book—probably the best book on climate change for the intelligent layperson—that achieves the feat of conveying complex information clearly and in depth." —Claremont Review of Books "Surging sea levels are inundating the coasts." "Hurricanes and tornadoes are becoming fiercer and more frequent." "Climate change will be an economic disaster." You've heard all this presented as fact. But according to science, all of these statements are profoundly misleading. When it comes to climate change, the media, politicians, and other prominent voices have declared that "the science is settled." In reality, the long game of telephone from research to reports to the popular media is corrupted by misunderstanding and misinformation. Core questions—about the way the climate is responding to our influence, and what the impacts will be—remain largely unanswered. The climate is changing, but the why and how aren't as clear as you've probably been led to believe. Now, one of America's most distinguished scientists is clearing away the fog to explain what science really says (and doesn't say) about our changing climate. In *Unsettled: What Climate Science Tells Us, What It Doesn't, and Why It Matters*, Steven Koonin draws upon his decades of experience—including as a top science advisor to the Obama administration—to provide up-to-date insights and expert perspective free from political agendas. Fascinating, clear-headed, and full of surprises, this book gives readers the tools to both understand the climate issue and be savvier consumers of science media in general. Koonin takes readers behind the headlines to the more nuanced science itself, showing us where it comes from and guiding us through the implications of the evidence. He dispels popular myths and unveils little-known truths: despite a dramatic rise in greenhouse gas emissions, global temperatures actually decreased from 1940 to 1970. What's more, the models we use to predict the future aren't able to accurately describe the climate of the past, suggesting they are deeply flawed. Koonin also tackles society's response to a changing climate, using data-driven analysis to explain why many proposed "solutions" would be ineffective, and discussing how alternatives like adaptation and, if necessary, geoengineering will ensure humanity continues to prosper. *Unsettled* is a reality check buoyed by hope, offering the truth about climate science that you aren't getting elsewhere—what we know, what we don't, and what it all means for our future.

*The New York Times* best-selling book exploring the counterproductive reactions white people have when their assumptions about race are challenged, and how these reactions maintain racial inequality. In this “vital, necessary, and beautiful book” (Michael Eric Dyson), antiracist educator Robin DiAngelo deftly illuminates the phenomenon of white fragility and “allows us to understand racism as a practice not restricted to ‘bad people’ (Claudia Rankine). Referring to the defensive moves that white people make when challenged racially, white fragility is characterized by emotions such as anger, fear, and guilt, and by behaviors including argumentation and silence. These behaviors, in turn, function to reinstate white racial equilibrium and prevent any meaningful cross-racial dialogue. In this in-depth exploration, DiAngelo examines how white fragility develops, how it protects racial inequality, and what we can do to engage more constructively.

A practical, step-by-step guide for contracts managers, commercial managers, project managers, quantity surveyors, engineers and architects on the preparation of and responses to construction claims. Everyone involved in the preparation or review of construction claims should have this book to hand. The book examines the different types of claim common to construction contracts and presents a step-by-step guide to demonstrate the process of building up the submission of a claim and covers: Various types of claim. How the claim may be split into sections dealing with the details of the contract, the cause, the effect, entitlement and quantum. What this section is attempting to demonstrate or achieve and why. What should be included within the section and why. Worked examples of typical claims and responses with sample wording.

The celebrated author of *Gender Trouble* here redefines Antigone’s legacy, recovering her revolutionary significance and liberating it for a progressive feminism and sexual politics. Butler’s new interpretation does nothing less than reconceptualize the incest taboo in relation to kinship—and open up the concept of kinship to cultural change. Antigone, the renowned insurgent from Sophocles’s *Oedipus*, has long been a feminist icon of defiance. But what has remained unclear is whether she escapes from the forms of power that she opposes. Antigone proves to be a more ambivalent figure for feminism than has been acknowledged, since the form of defiance she exemplifies also leads to her death. Butler argues that Antigone represents a form of feminist and sexual agency that is fraught with risk. Moreover, Antigone shows how the constraints of normative kinship unfairly decide what will and will not be a livable life. Butler explores the meaning of Antigone, wondering what forms of kinship might have allowed her to live. Along the way, she considers the works of such philosophers as Hegel, Lacan, and Irigaray. How, she asks, would psychoanalysis have been different if it had taken Antigone—the “postoedipal” subject—rather than *Oedipus* as its point of departure? If the incest taboo is reconceived so that it does not mandate heterosexuality as its solution, what forms of sexual alliance and new kinship might be acknowledged as a result? The book relates the courageous deeds of Antigone to the claims made by those whose relations are still not honored as those of proper kinship, showing how a culture of normative heterosexuality obstructs our capacity to see what sexual freedom and political agency could be.
