The Cleveland Clinic Cardiology Board Review

ECG Interpretation Made Ridiculously Simple

Cardiology

The book blends the essentials of basic pharmacology and clinical pharmacology so that the transition from classroom to hospital is less abrupt. Students report that the book is most effective when lecture notes are written directly on the tables and margins, providing a single, concise guide for finals and the National Boards.

A clear, concise, highly practical and enjoyable overview of all of clinically relevant cardiology. History, physical, ECG (ECG interpretation taught in just 40 pages), radiology, noninvasive and invasive diagnostic tests, and therapy (both pharmacologic and nonpharmacologic). Includes interactive CD-ROM (Win/Mac) with heart sounds, ECG interpretation, chest x-rays, echocardiography and quiz. For medical students, house officers, cardiac fellows, practicing physicians, and other health care professionals.

Keeping up with the use of new technologies in cardiology is becoming increasingly challenging. Case Studies in Clinical Cardiac Electrophysiology helps to bridge the gap between knowledge and application with 28 cases spanning both common and uncommon arrhythmias and ablation scenarios, each of which includes the clinical presentation, baseline ECG, ECG during arrhythmia, stepwise electrophysiologic diagnostic maneuvers and some of their pitfalls, and optimal therapy. Includes 28 cases spanning the spectrum of what an electrophysiologist is likely to see in practice. Shows the correct way of conducting procedures, as well as "detours" that an unwary practitioner may take: misdiagnoses and why they are wrong; incorrect therapeutic choices and why these may be not only unsuccessful but even harmful. Encourages you to read and interpret the ECGs, mapping diagrams, and other diagnostic information before revealing the expert opinion or actual results of each case. Summarizes the key learning points in each case. Discusses potential procedural complications, including anticipation, avoidance, recognition, and response and resolution. Covers complex ablations (atrial fibrillation, ventricular tachycardia) as well as prior failed ablations.
