Teaches students how to " think like an APRN " This book describes an innovative model for helping APRN students develop the clinical reasoning skills required to navigate complex patient care needs and coordination in advanced nursing practice. This model, the Outcome-Present-State-Test (OPT), encompasses a clear, step-by-step process that students can use to learn the skills of differential diagnosis and hone clinical reasoning strategies. This method facilitates understanding of the relationship among patient problems, outcomes, and interventions that focus on promoting patient safety and care coordination. It moves beyond traditional ways of problem solving by focusing on patient scenarios and stories and juxtaposing issues and outcomes that have been derived from an analysis of patient problems, evidence-based interventions, and desired outcomes. The model offers a blueprint for using standardized health care languages and provides strategies for developing reflective and complex thinking that becomes habitual. It embodies several levels of perspective related to patient-centered care planning, team-centered negotiation, and health care system considerations. Through patient stories and case scenarios, the text highlights care coordination strategies critical in complex patient situations. It provides students with the tools to collect patient information, determine priorities for care, and test interventions to reach health care outcomes by making clinical judgments during the problem-solving process. Concept maps illustrate complex patient care issues and how they relate to each other. For faculty use, the text provides links to relevant APN competencies and provides guidelines for using the OPT when supervising students in field settings. Key Features: Delivers a concrete learning model for developing creative thinking and problem solving in the clinical setting Offers a blueprint and structure for using standardized health care languages Includes patient stories and case scenarios to illustrate effective use of the OPT model Highlights care coordination strategies associated with complex client situations with the use of the Care Coordination Clinical Reasoning model Reinforces methods of reaching a diagnosis, outcomes, and interventions and how to duplicate the process

Medical errors are responsible for at least 195,000 unnecessary deaths each year and indiscriminate use of antibiotics has resulted in the creation of drug resistant-bacteria - we are in the "post-antibiotic era" for certain diseases. Yet hope remains. The baby boomers' distrust of authority and "experts" may once again serve them well. They are still healthy enough to have many years of quality life ahead of them, if they are proactive. Unfortunately, even educated laymen have little understanding of medical treatment and often have no choice but to follow the physician's guidance. This book is written to fill that void. Its sole purpose is to focus on documented outcomes from medical therapy. Books explaining disease processes and treatments are commonplace. Usually the only real difference is the author is a famous physician or celebrity, or the author is promoting a trendy new "discovery." This book is written from a totally different perspective. About six years ago while working in the medical intensive care unit of a regional medical center, I became disillusioned because my patients continued to die or to have poor medical outcomes despite aggressive advanced medical care. My research training significantly influences my thought processes; I I reasoned that if my patients were dying despite our efforts, then perhaps the care they were receiving was not really as "advanced" as we thought. I asked my chief physician if there were any books available discussing patient outcomes. "No," he said. "Insurance companies keep that information locked up." The information does exist, but it is scattered throughout the medical literature. Here, I have attempted to consolidate it into onesource and simplify it as much as possible so that you can make truly informed decisions. Richard Stanzak is a critical care nurse. He also worked as a molecular biologist for fourteen years, seven of them for Eli Lilly pharmaceuticals in both research and development. As a traveling ICU nurse he has been employed at 19 different assignments. He has worked in major trauma units, transplant units, cardiac units and hospitals from 1150 beds to 8 beds. He has experienced first-hand the problems of healthcare and can certainly attest this is a national problem. Stanzak is the author and/or co-author of several papers and also has several patents. He is the lead author of a benchmark paper on the cloning of genes responsible for the production of erythromycin. He was engaged in research at Eli Lilly when Prozac was first discovered and Genentech first licensed the insulin gene to Lilly. As a critical care nurse, he is responsible for providing teaching to patients or families about drugs, diseases and procedures.

Over the past ten years, nursing and midwifery in Ireland have experienced a considerable number of changes, driven principally by the Report of the Commission on Nursing, published in 1998, and the health service reform programme, announced in 2003. In the same period, Irish society has become wealthier and more culturally diverse, creating new challenges for nursing and midwifery. In *Nursing and Midwifery in Ireland*,

Yvonne O'Shea sets out to identify the role for nursing and midwifery in the health services of the future in Ireland and to formulate a strategy for the professional development required for the professions. The book has three parts. Part 1 sets out to establish the context within which the professions of nursing and midwifery operate in Ireland by examining the implications of recent key policy developments and the roles played by the Report of the Commission on Nursing and the National Council for the Professional Development of Nursing and Midwifery. Part 2 forms the core of the book and is based on seventy-seven interviews with senior figures in the health services, including policymakers, service managers, medical consultants, educators and leaders of nursing and midwifery. Part 3 goes on to outline a strategy for the professional development of nursing and midwifery, including key steps necessary to reach objectives and to realise the strategy's long-term vision. Published at a time of significant change within the health services in Ireland, the book is intended as a contribution to ensuring that nursing and midwifery take their place at the heart of health service transformation. It will be of great value to all role players in the Irish health service.

*Endorsed by the Association of Radiologic and Imaging Nursing (ARIN), this first of a kind comprehensive radiology nursing textbook fills a gap by addressing important subjects for patient care and professional issues, as well as, future possibilities affecting nursing practice. It serves as a resource to related nursing specialties, e.g. critical care, emergency or peri-anesthesia, and to radiologic technologists and physician assistants. The book could be used as one resource for studying for radiologic nursing certification. The textbook is subdivided into five sections that address advanced practice and leadership roles, clinical patient care topics, safety topics, including legal considerations, e.g. infection prevention and equipment. It includes a section with topics impacting the patient experience and a section on professional topics, e.g. cybersecurity, social media, research/outcomes, interprofessional collaboration, workplace violence and current trends in imaging. The authors include advanced practice providers, radiology nurse managers, educators, physicians, a physicist, a dentist, attorneys, a child life specialist, administrators and a social worker. Radiology diagnostic examinations and therapeutic procedures have become a more prominent part of patient care due to advances in technology and the ability of radiology to provide services that were traditionally done in surgery or not done because of limited knowledge. Many procedures are facilitated by the radiology nurse from initial consult to transfer to a hospital unit or discharge and follow-up. Nurses assess, monitor, administer sedation/other medications and respond to emergencies. They serve as educators, researchers, and resource personnel to the radiology department and in many instances, to the entire facility. Radiology nurses are real leaders. In order to keep up-to-date on new developments, nurses need new literature to support their clinical expertise and leadership. *Neither legalization of abortion nor scientific and political advances in contraception and abortion ensure that training and research in family planning are routinely integrated into medical education. Without integration, subsequent generations of healthcare professionals are not prepared to incorporate evidence-based family planning into their practices, teaching, or research. Omission of this crucial component prevents the cultural and professional normalization of an often stigmatized and embattled aspect of women's health. Taking the successful US-based Ryan and Family Planning Fellowship programs as templates for training, teaching, and academic leadership, this book describes the integration of family planning and pregnancy termination into curricula with an international outlook. With an evidence- and systems-based approach, the book is a unique and practical guide to inspire and train the next generation of healthcare professionals.*

*The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.*
