Capitalist Nigger is an explosive and jarring indictment of the black race. The book asserts that the Negroid race, as naturally endowed as any other, is culpably a non-productive race, a consumer race that depends on other communities for its culture, its language, its feeding and its clothing. Despite enormous natural resources, blacks are economic slaves because they lack the ‘devil-may-care’ attitude and the ‘killer instinct’ of the Caucasian, as well as the spider web mentality of the Asian. A Capitalist Nigger must embody ruthlessness in pursuit of excellence in his drive towards achieving the goal of becoming an economic warrior. In putting forward the idea of the Capitalist Nigger, Chika Onyeani charts a road to success whereby black economic warriors employ the ‘Spider Web Doctrine’ – discipline, self-reliance, ruthlessness – to escape from their victim mentality. Born in Nigeria, Chika Onyeani is a journalist, editor and former diplomat.

For all those who are interested in horology, whether as a hobby or within the trade, this user-friendly guide is invaluable as a wealth of information for the internal workings of clocks. Eric Smith provides a fully comprehensive manual to the repair of clocks, whether modern or antique. Lucid language accompanies practical diagrams and photographs to bring clarity to what is often a highly complex task. The author recognises the curiosity which many feel about the workings of clocks. It is for this reason that the author has written a guide which does not depict horology as too complex for those outside the trade, but rather as a fascinating and accessible occupation. The ten chapters go through the practical stages of how different clocks work and the tools and materials needed. Pendulum clocks, 30-hour, 8-day and 400-day clocks, chiming, striking, and electric and alarm clocks are all covered in detail. This new revised edition includes a chapter on working with more advanced tools including the lathe. The first chapter addresses the tools and materials which are required for repair, whilst the second chapter provides an explanation of the principles of clock mechanisms. The author subsequently takes the reader through specific aspects of clocks in each chapter, from the pendulums and balance wheels to cases and hands. A chapter on electric clocks gives advice on a significant sector of the clock market. In addition, this volume includes a glossary of terms, a bibliography and a list of suppliers of materials. It is also fully indexed. The author recognises that there is much in horology which cannot be self-taught from a book, yet Clocks and Clock Repairing is both a book to stimulate interest and a handy reference guide.

The grandfather clock, an entirely new kind of furniture, first appeared in the late seventeenth century. From then on, with its long case to protect pendulum and weights, its rugged movement and large, clear indication of time, it has been a success story right up to the present day. Virtually none of these clocks is beyond repair and often the work required is within the scope of inexperienced owners. This is the first full-length book to cover repair and restoration of these attractive and often valuable antiques, including their casework. The first part outlines how to clean and service the clock ‘works’ and also how to refurbish the dial, while in the second part restoration or casework, both structural repairs and finishing, is considered. The illustrations are of two actual clocks (one eight-day and one thirty-hour) and work proceeding on them. The last part of the book sketches common variations from these particular examples. Armed with this book and appropriate tools (for work on both movement and case), the owner of a dilapidated grandfather clock will be encouraged and given the know-how to restore it to life as a useful and attractive clock and a prized possession.

" [A] mystery, LGBTQ romance, and supernatural tale of clock spirits and sabotage that explores how far people might go for those they love." —Booklist An alternate Victorian world controlled by clock towers, where a damaged clock can fracture time—and a destroyed one can stop it completely. A prodigy mechanic who can repair not only clockwork, but time itself, determined to rescue his father from a Stopped town. A series of mysterious bombings that could jeopardize all of England. A boy who would give anything to relive his past, and one who would give anything to live at all. A romance that will shake the very foundations of time. The first book in a dazzling new steampunk-fantasy trilogy, Timekeeper introduces a magical world of mythology and innovation that readers will never want to leave. " Timekeeper is an extraordinary debut, at once familiar and utterly original. Between its compelling world, its lovely prose, and its wonderful characters, the pages flew by." —Victoria Schwab, #1 New York Times–bestselling author " A triumph . . . If you read only one such book . . . let it be this one." —Bustle " Timekeeper ’ s premise is original and its world unique." —EW.com " This LGBTQ steampunk romance sports a hobby, designed to furnish the novice enthusiast with an elementary understanding of watches that will enable them to clean them and make minor repairs. Written in simple, concise language and full of handy tips and useful diagrams, this text is ideal for those with an interest in amateur watch maintenance, and makes for a great addition to collections of allied literature. Watch Repairing as a Hobby

Experience is making a comeback. Learn how to repurpose your wisdom. At age 52, after selling the company he founded and ran as CEO for 24 years, rebel boutique hotelier Chip Conley was looking at an open horizon in midlife. Then he received a call from the young founders of Airbnb, asking him to help grow their disruptive start-up into a global hospitality giant. He had the industry experience, but Conley was lacking in the digital fluency of his 20-something colleagues. He didn't write code, or have an Uber or Lyft app on his phone, was twice the age of the average Airbnb employee, and would be reporting to a CEO young enough to be his son. Conley quickly discovered that while he'd been hired as a teacher and mentor, he was also in many ways a student and intern. What emerged is the secret to thriving as a mid-life worker: learning to marry wisdom and experience with curiosity, a beginner's mind, and a willingness to evolve, all hallmarks of the "Modern Elder." In a world that venerates the new, bright, and shiny, many of us are left feeling invisible, undervalued, and threatened by the "digital natives" nipping at our heels. But Conley argues that experience is on the brink of a comeback. Because at a time when power is shifting younger, companies are finally waking up to the value of the humility, emotional intelligence, and wisdom that come with age. And while digital skills might have only the shelf life of the latest fad or gadget, the human skills that mid-career workers possess--like good judgment, specialized knowledge, and the ability to collaborate and coach - never expire. Part manifesto and part playbook, Wisdom@Work ignites an urgent conversation about ageism in the workplace, calling on us to treat age as we would other type of diversity. In the process, Conley liberates the term "elder" from the stigma of "elderly," and inspires us to embrace wisdom as a path to growing whole, not old. Whether you've been forced to make a mid-career change, are choosing to work past retirement age, or are struggling to keep up with the millennials rising up the ranks, Wisdom@Work will help you write your next chapter.

The instant #1 New York Times bestseller | A Washington Post Notable Book | One of NPR’s Best Books of 2021 The definitive behind-the-scenes story of Trump’s final year in office, by Phil Rucker and Carol Leonnig, the Pulitzer-Prize winning reporters and authors of A Very Stable Genius. “Chilling.” – Anderson Cooper “Jaw-dropping.” – John Berman “Shocking.” – John Heilemann “Explosive.” – Hallie Jackson “Blockbuster new reporting.” – Nicole Wallace “Bracing new revelations.” – Brian Williams “Bombshell reporting.” – David Muir The true story of what took place in Donald Trump’s White House during a disastrous 2020 has never before been told in full. What was really going on around the president, as the government failed to contain the coronavirus and over half a million Americans perished? Who was influencing Trump after he refused to concede an election he had clearly lost and spread lies about election fraud? To answer these questions, Phil Rucker and Carol Leonnig reveal a dysfunctional and bumbling presidency’s inner workings in unprecedented, stunning detail. Focused on Trump and the key players around him—the doctors, generals, senior advisers, and Trump family members—Rucker and Leonnig provide a forensic account of the most devastating year in a presidency like no other. Their sources were in the room as time and time again Trump put his personal gain ahead of the good of the country. These witnesses to history tell the story of him longing to deploy the military to the streets of American cities to crush the protest movement in the wake of the killing of George Floyd, all to bolster his image of strength ahead of the election. These sources saw firsthand his refusal to take the threat of the coronavirus seriously—even to the point of allowing himself and those around him to be infected. This is a story of a nation sabotaged—economically, medically, and politically—by its own leader, culminating with a groundbreaking, minute-by-minute account of exactly what went on in the Capitol building on January 6, as Trump’s supporters so easily breached the most sacred halls of American democracy, and how the president reacted. With unparalleled access, Rucker and Leonnig explain and expose exactly who enabled—and who foiled—Trump as he sought desperately to cling to power. A classic and heart-racing work of investigative reporting, this book is destined to be read and studied by citizens and historians alike for decades to come.

Clock Repairing As a Hobby

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing . . .and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

A practical guide which contains a wealth of information and professional advice on the working and maintenance of striking and chiming clocks. The author concentrates on the medium-priced and inexpensive pieces which are most likely to appear for repair

Explores the subtle, secret influences that affect the decisions we make--from what we buy, to the careers we choose, to what we eat.

Longcase clocks were individually hand-made during the golden age of change that took place between the late seventeenth and mid-nineteenth centuries. Longcase clocks with their seventeenth century clock-making technology were innovative and incorporated an accurate pendulum clock within an attractive piece of domestic furnishing. This invaluable book is essential reading for all those who own and collect longcase clocks as well as clock repairers, horologists and conservationists. The authors provide detailed information about how longcase clocks work and how they are made. They also cover the theory and the 'best practice' practical steps that are required in longcase clock maintenance, restoration

and conservation. The book outlines the history and horological development of longcase clocks; describes how longcase clocks can be dated; considers materials, tools and equipment; examines the movement and the associated simple, and more difficult, workshop procedures; covers maintenance and effective repairs; explains the more difficult woodwork procedures. Superbly illustrated with 300 colour photographs. Nigel Barnes and Austin Jordan provide advice and guidance in the field of antique horology and regularly run weekend courses.
