The 2nd edition of Peter Westwood's best-selling Numeracy and Learning Difficulties addresses recent initiatives around the teaching of numeracy, the increased focus on numeracy standards, and international research around numeracy teaching, learning and pedagogy. Drawing on research from the fields of developmental and cognitive psychology, Peter Westwood presents a case for high-quality 'first teaching' to prevent

students failing in the initial acquisition of numeracy skills. Numeracy and Learning Difficulties provides guidance on how to develop flexible teaching methods and strategies to improve mathematical skills of students. It discusses common areas of learning difficulty in mathematics and looks at ways teachers can determine gaps in students' knowledge, as well as how to develop curricula and problem-solving strategies to address these gaps. In the Learning Difficulties series, Peter Westwood evaluates, summarises and presents research, strategies and best-practice methodologies

The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.

working in higher education practical support in achieving formal accreditation of their teaching practice with the Higher Education Academy (HEA). It maps a range of key themes against the UKPSF (United Kingdom Professional Standards Framework) and invites readers to engage with the all-important dimensions of practice. This book is relevant both to those who are in the process of preparing an application for an HEA fellowship and to those who are preparing assignments they might be producing for a PG Cert (HE) programme. The book explains the dimensions of practice in detail and offers readers suggestions for ways in which they might engage with particular aspects of the UK PSF at the end of each section and thus evidence the quality of their teaching practice. Each

section also offers suggestions on ways to develop teaching as related to the themes. Its distinctive features include: Linking explicitly to the UK PSF (UK Professional Standards Framework) and offering practical advice to those making a fellowship application. Integrating this practical element with some of the wider debates about the purpose of higher education Incorporating a thread of student engagement throughout the book, including students' own perspectives on the themes of the book. Not only will the book support academics following an accreditation route, the book will also be a useful companion text on taught courses since the UK PSF is the overarching framework for people working in HE in a teaching capacity. In July 2010, the Massachusetts Board of Elementary and Secondary Education (BESE) voted to adopt Common Core's standards in English language arts (ELA) and mathematics in place of the state's own standards in these two subjects. The vote was based largely on recommendations by Commissioner of Education Mitchell Chester and then Secretary of Education Paul Reville, and on the conclusions in three studies comparing the state's standards with Common Core's, all financed directly or indirectly by the Bill & Melinda Gates Foundation, and all issued by organizations that are among the

primary boosters of Common Core (Achieve, Inc., Thomas B. Fordham Institute, and Massachusetts Business Alliance for Education). Nevertheless, annual state testing for school and district accountability continued as part of the Massachusetts Comprehensive Assessment System (MCAS) mandated by the 1993 Massachusetts Education Reform Act (MERA). To accommodate the adoption of Common Core's standards, tests were based on both the old standards and an annually increasing number of Common Core's standards until 2015, when all of the pre-Common Core standards in ELA and mathematics were archived, and the MCAS tests were presumably only Common Core-based. After the vote to adopt Common Core's standards in 2010, the state joined the testing

consortium called Partnership for Assessment of Readiness for College and Careers (PARCC), funded by the United States Department of Education (USED) to develop common tests for its member states (about 25 initially), but with the costs for administering the tests to be borne by the states and local school districts. Since 2011, PARCC has been developing tests that BESE is expected to vote to adopt in the late fall of 2015 as the state's official Common Core-based tests in place of Common Corebased MCAS tests. (Indeed, the commissioner of education and his staff at the Department of Elementary and Secondary Education (DESE) have been implementing a transition to PARCC tests for several years.) BESE's official vote will be guided, again, by the recommendations of the

same commissioner of education (who now also chairs PARCC's Governing Board), the current Secretary of Education James Peyser, and the conclusions reached in "external" studies comparing PARCC and MCAS tests as well as in about 20 studies directly authorized by PARCC. Two of the external studies are listed in the state's 2015 application to the USED for a waiver from No Child Left Behind Act requirements and are by organizations that had originally recommended adoption of Common Core. One, issued by the Massachusetts Business Alliance for Education in February 2015, claims that PARCC tests predict college readiness better than MCAS tests did. A second, to be completed by the Fordham Institute and a partner, is to be issued in time for

BESE's vote. A third, issued in mid-October 2015 by Mathematica Policy Research (and requested by the state's Executive Office of Education) claims both tests are equally predictive of college readiness, although its report has major shortcomings. This White Paper will be a fourth external report on the question BESE's vote will address; it is motivated by our interest in providing an analysis of how MCAS and PARCC assess reading and writing. Much less national attention has been paid to Common Core-based assessments of reading and writing than of mathematics, yet reading and writing skills are just as important to readiness for college and career as is mathematics. This White Paper's central recommendation is that Massachusetts use a testing system for

Read Free Common Paper March2014 Mathematics Grade10

K-12 that is much less costly, more rigorous academically, and much more informative about individual student performance, and with much less instructional time spent on test preparation and administration, than the current PARCC tests. Both the PARCC tests and the current MCAS tests in grade 10 are weak, albeit for different reasons, and neither indicates eligibility for a high school diploma, college readiness, or career readiness. In essence, the authors recommend that BESE reject the PARCC assessment system and vote for the MCAS system but on the condition that the responsibility for developing and administering K-12 standards and tests be assigned to an organization in Massachusetts independent of DESE and the state's education schools. This organization

must focus squarely on providing the best possible content standards from disciplinary experts in the arts, sciences, and engineering throughout the state and be capable of providing oversight of high school standards and tests. If carried out, these recommendations would ensure the legacy and future promise of MERA. The following are appended: (1) Critique of Criteria for Evaluating Common Core-Aligned Assessments, (2) Links to Public Hearings and Other Sources of Public Comment on MCAS or PARCC, and (3) A Randomly-Chosen Test Item Used on the 2014 Grade 10 MCAS Math Test. 2013, according to polls. But it had been creeping into schools nationwide over the previous three years, and children were feeling its effects. They cried over math homework so mystifying their parents could not help them, even in elementary school. They read motley assortments of “ informational text ” instead of classic literature. They dreaded the high-stakes tests, in unfamiliar formats, that were increasingly controlling their classrooms. How did this latest and most sweeping “ reform ” of American education come in mostly under the radar? Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers, and it led to a big tangle of history and politics, intrigue and arrogance. She unwound it to discover how a cabal of private

foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K – 12 classes, and how the Obama administration pressured states to adopt them. Thus a federalized education scheme took root, despite legal prohibitions against federal involvement in curriculum. Common Core and its testing regime were touted as “ an absolute game-changer in public education, ” yet the evidence so far suggests that kids are actually learning less under it. Why, then, was such a costly and disruptive agenda imposed on the nation ’ s schools? Who benefits? And how can citizens regain local self-governance in education, so their children ’ s minds will be fed a more nourishing intellectual diet and be protected from the
