In the past decade, states across the nation have cut higher education spending per student by more than 15 percent. Kentucky has experienced some of the largest cuts in the country, leading many to claim that higher education is in a state of crisis. In spite of this turmoil, however, Kentucky's remarkable institutions of higher education stand more capable than ever to prepare new generations for the challenges and opportunities of their time. College for the Commonwealth: A Case for Higher Education in American Democracy illustrates how colleges and universities are the sustaining lifeblood of civil society and that when these vital institutions are underfunded, both the community and economy suffer. postsecondary education through the lens of Kentucky. Presented as a practical yet persuasive look at why America needs thoughtful reinvestment in its colleges and universities, this study details how helping students can help sustain a healthy, democratic social fabric while bolstering the modern economy. Gathering examples and offering solutions for postsecondary institutions, this work serves as a call to action and a roadmap for educators, administrators, and government officials.

Ethereal, a collection of poems and short-stories on love, strength, betrayal, fears and tears; is not just a book, but a form of prepossessing art as it gave a magical voice to so many young authors, artists and photographers. Ethereal acquaints us with the concept of cosmic magic, something extremely delicate and light in a way that seems not to be of this world, and hence this concept has thoroughly appertained throughout this anthology. What makes Ethereal unique is, that it's not a collection of only poems and short stories, instead it

education around the world. It provides data on the structure, finances and performance of education systems in the 35 OECD and a number of partner countries. Invisible Masters rewrites the familiar narrative of the relation between Puritan religious culture and New England's economic culture as a history of the primary discourse that connected them: service. The understanding early Puritans had of themselves as God's servants and earthly masters was shaped by their immersion in an Atlantic culture of service and the worldly pressures and opportunities generated by New England's particular place in it. Concepts of spiritual service and mastery determined Puritan views of the men, women, and children who were servants and slaves in that world. So, too, did these concepts shape the experience of family, labor, law, and economy for those men, women, and children - the very bedrock of their lives. This strikingly original look at Puritan culture will appeal to a wide range of Americanists and historians.

presents a compelling, empirically based argument that although there is currently a panoply of measures aimed at preventing human trafficking, prosecuting offenders and protecting trafficked victims in both Europe and the Commonwealth Caribbean, these measures have in practice been fraught with a number of challenges, whether of a normative, institutional or individual nature. The continued existence of these challenges strongly suggests that there exists a 'disconnect' between anti-trafficking law and practice which is not peculiar to small-island developing States since they also extend to developed States, including the United Kingdom. Although these challenges are not insurmountable, this monograph advances the argument that sustained social, economic, political and legal commitments are both necessary and desirable, and that without such commitments, only pyrrhic victories would be won in the fight to eradicate the scourge of the twenty-first century. Given the importance of the issue of human trafficking and its inescapable impact on victims, families, communities, nations, regions and the international community as a whole, this monograph will serve as an important resource for policy makers, scholars, students and practitioners actively working in this increasingly dynamic area of law.

As with any industry, the education sector goes through frequent changes due to modern technological advancements. It is every educator's duty to keep up with these shifting requirements and alter their teaching style to best fit the needs of their classroom. service teacher programs as well as continuing education initiatives for in-service educators. It also emphasizes the growing role of technology in teacher skill development and training as well as key pedagogical developments and methods. Highlighting a range of topics such as teacher preparation programs, teaching standards, and fieldwork and practicum experiences, this multi-volume book is designed for pre-service teachers, teacher educators, researchers, professionals, and academics in the education field.

Full participation by small and developing countries in the financial services sector requires a "level playing field". This work analyses debates on this issue between the OECD and small and developing countries, and suggests ways to ensure fairness in international taxation matters.

Black men are increasingly underrepresented in medical schools and in the medical profession. A diverse workforce is a key attribute of quality healthcare and research suggests that a diverse workforce may help to advance cultural competency and increase access to high-quality health care, especially for underserved populations. Conversely, lack of diversity in the health workforce threatens health care quality and access and contributes to health disparities.

In this way, the growing absence of Black men in medicine is especially troubling, because their absence in medicine may have adverse consequences for health care access, quality, and outcomes among Black Americans and Americans overall. To better understand the factors that contribute to the low participation of Black men in the medical profession, facilitate discussion of current strategies used to increase their participation in medical education, and explore new strategies along the educational and professional pipeline that may have potential to increase participation in medicine, the National Academies of Sciences, Engineering, and Medicine and the Cobb Institute jointly convened a 2-day workshop in November 2017, in Washington, DC. This publication summarizes the presentations and discussions from the workshop.

This book discusses how Big Data could be implemented in educational settings and research, using empirical data and suggesting both best practices and areas in which to invest future research and development. It also explores: 1) the use of learning analytics to improve learning and teaching; 2) the opportunities and challenges of learning analytics in education. As Big Data becomes a common part of the fabric of our world, education and research are challenged to use this data to improve educational and research systems, and also are tasked with teaching coming generations to deal with Big Data both effectively and ethically. The Big

Data era is changing the data landscape for statistical analysis, the ways in which data is captured and presented, and the necessary level of statistical literacy to analyse and interpret data for future decision making. The advent of Big Data accentuates the need to enable citizens to develop statistical skills, thinking and reasoning needed for representing, integrating and exploring complex information. This book offers guidance to researchers who are seeking suitable topics to explore. It presents research into the skills needed by data practitioners (data analysts, data managers, statisticians, and data consumers, academics), and provides insights into the statistical skills, thinking and reasoning needed by educators and researchers in the future to work with Big Data. This book serves as a concise reference for policymakers, who must make critical decisions regarding funding and applications.
