The rapid growth in online and virtual learning opportunities has created culturally diverse classes and corporate training sessions.

Instruction for these learning opportunities must adjust to meet participant needs. Online Course Management: Concepts, Methodologies, Tools, and Applications is a comprehensive reference source for the latest scholarly material on the trends, techniques, and management of online and distance-learning environments and examines the benefits and challenges of these developments. Highlighting a range of pertinent topics, such as blended learning, social presence, and educational online games, this multi-volume book is ideally designed for administrators, developers, instructors, staff, technical support,

and students actively involved in teaching in online learning environments.

This text covers basic research issues and both quantitative and qualitative approaches to communications research. The guiding principle of the text is that methodological choices are made from one's research questions and hypotheses.

Carefully structured to link information directly to the CIM syllabus, this coursebook text offers a range of cases, questions, activities, definitions and study tips to support and test your understanding of the theory. Each coursebook includes access to a

Maternal and Child Health Nursing

TEXTBOOK ON OPTICAL FIBER

COMMUNICATION AND ITS

APPLICATIONS, THIRD EDITION

asking questions, finding answers

The book, now in its third edition, is thoroughly revised and updated as per the new syllabi of Optical

Fiber Communication of various universities. The material is well-presented and designed for undergraduate and postgraduate students pursuing courses in Electrical Engineering, and Electronics and Telecommunication Engineering. The book offers a completely accessible and in-depth knowledge of the principles and applications of optical fiber communication (OFC). It deals with materials, devices, components, and systems of OFC. The coverage includes key concepts such as properties of light, evolution and elements of OFC, its benefits, along with applications in optical LAN and communication links. The attenuation loss of different

types, dispersion mechanism, photon sources (LED and lasers), detectors (PIN and avalanche), analog and digital transmitter and receiver systems, connectorization, OADM, and amplifiers are described. Built-up of long haul OFC links at 8 Mb/s and 2.5 Gb/s, and optical interface are explained with illustrations. It also contains solved numerical problems for better understanding of topics.

KEY FEATURES

- **Includes optical fiber LAN for data centres and industries**
- **Provides detail treatment of LED, semiconductor, lasers, Tx and Rx**
- **Discusses all optical communications links and optical networks**
- **Includes important questions with answers**
- **Provides practice papers and**

model test papers

In two freestanding volumes, Textbook of Neural Repair and Rehabilitation provides

comprehensive coverage of the science and practice of neurological rehabilitation.

Revised throughout, bringing the book fully up to date, this volume, Medical

Neurorehabilitation, can stand alone as a clinical handbook for neurorehabilitation. It covers the practical applications of the basic science principles presented in Volume 1, provides authoritative guidelines on the management of disabling symptoms, and describes comprehensive rehabilitation approaches for the major categories of disabling neurological disorders. New

chapters have been added covering genetics in neurorehabilitation, the rehabilitation team and the economics of neurological rehabilitation, and brain stimulation, along with numerous others. Emphasizing the integration of basic and clinical knowledge, this book and its companion are edited and written by leading international authorities. Together they are an essential resource for neuroscientists and provide a foundation of the work of clinical neurorehabilitation professionals. Elsevier/Butterworth-Heinemann's 2006-2007 CIM Coursebook series offers you the complete package for exam success. Comprising fully

updated Coursebook texts that are revised annually and independently reviewed with free online access to the MarketingOnline learning interface, it offers everything you need to study for your CIM qualification. Carefully structured to link directly to the CIM syllabus, this Coursebook is user-friendly, interactive and relevant. Each Coursebook is accompanied by access to **MARKETINGONLINE (www.marketingonline.co.uk), a unique online learning resource designed specifically for CIM students, where you can:**

Coursebook online for easy access to definitions and key concepts *Access the glossary for a comprehensive list of marketing terms and their meanings Written by the CIM Level verifier for the Cim Certificate and fully endorsed by the institute to guide you through the 2006-2007 syllabus Each text is crammed with a range of learning objectives, cases, questions, activities, definitions, study tips and summaries to support and test your understanding of the theory Contains past examination papers and examiners' reports to enable you to practise what has been learned and help prepare for the exam

Communication Skills for

Business Professionals is a student-friendly introduction to the principles and practice of effective communication in the workplace. Engagingly written and full of real-life examples, it explains the key theories underpinning communication strategies and encourages students to consider how to apply them in a contemporary business environment. After working through foundation topics such as understanding the audience, persuasion and influence, negotiation and conflict management, and intercultural complexities, students will explore the various modes and contexts of workplace communication including meetings, oral communication,

written reports and correspondence. The text incorporates discussion of new digital technologies such as virtual real-time communication, and dedicates an entire chapter to the specific considerations involved in writing for the web. With its emphasis on Australian contexts and examples, Communication Skills for Business Professionals is an excellent introduction to the world of professional communication.

An accessible, yet

mathematically rigorous, one-semester textbook, engaging students through use of problems, examples, and applications.

The revised Fourth Edition of The SAGE Handbook of Interpersonal Communication delivers a clear, comprehensive, and exciting overview of the field of interpersonal communication. It offers graduate students and faculty an important, state-of-the-art reference work in which well-known experts summarize theory and current research. The editors also explore key issues in the field, including personal

relationships, computer-mediated communication, language, personality, skills, nonverbal communication, and communication across a person's life span. This updated handbook covers a wide range of established and emerging topics, including: Biological and Physiological Processes Qualitative and Quantitative Methods for Studying Interpersonal Communication Interpersonal Communication in Work, Family, Intercultural, and Health Contexts Supportive and Divisive Transactions Social Networks Editors Mark L. Knapp and John A. Daly

have significantly contributed to the field of interpersonal communication with this important reference work—a must-have for students and scholars.

Both authors have taught the course of “Distributed Systems” for many years in the respective schools. During the teaching, we feel strongly that “Distributed systems” have evolved from traditional “LAN” based distributed systems towards “Internet based” systems. Although there exist many excellent textbooks on this topic, because of the fast development of distributed systems and network

programming/protocols, we have difficulty in finding an appropriate textbook for the course of “distributed systems” with orientation to the requirement of the undergraduate level study for today’s distributed technology. Specifically, from - to-date concepts, algorithms, and models to implementations for both distributed system designs and application programming. Thus the philosophy behind this book is to integrate the concepts, algorithm designs and implementations of distributed systems based on network programming. After using

several materials of other textbooks and research books, we found that many texts treat the distributed systems with separation of concepts, algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design, prototyping and implementations. This book intends to enable readers, especially postgraduates and senior undergraduate level, to study up-to-date concepts, algorithms and network programming skills for building modern distributed systems. It enables students

not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices.
