Capitalism Circulation And The Foreclosure

This title was first published in 1976. The attainment of political independence by more than ninety countries since the Second World War has directed attention to the conditions of economic helplessness and dependency that continue to frustrate the development of at least two-thirds of the world's nations. Two and sometimes three decades of disappointing efforts to extricate themselves from dependency have begun

to provoke serious reappraisals in many lands about the entire concept of development. Accordingly, the time ahead will surely be a period of growing cultural-communications struggle □ intra- and inter - nationally □ between those seeking the end of domination and those striving to maintain it. The intention of this work is to assist, in a very modest way, in the outcome of this struggle.

This book offers a fresh and accessible introduction to the relationship between media power and cultural production. By marshalling a range of

theoretical perspectives from political economy and cultural studies, The Media and Cultural Production invites the reader to analyze the relationship between the making of meaning, political, economic and social power and the machinery of cultural production - the media. The book: critically examines the notion of the 'cultural industries'; examines the regulatory framework in which the cultural industries operate; looks at the impact of globalization on cultural production; explores the way in which meaning is both produced and contested. Publisher Description

The definitive, bestselling book on the origins of nationalism, and the processes that have shaped it. Imagined Communities, Benedict Anderson's brilliant book on nationalism, forged a new field of study when it first appeared in 1983. Since then it has sold over a quarter of a million copies and is widely considered the most important book on the subject. In this greatly anticipated revised edition, Anderson updates and elaborates on the core question: what makes people live and die for nations, as

well as hate and kill in their name? Anderson examines the creation and global spread of the 'imagined communities' of nationality, and explores the processes that created these communities: the territorialization of religious faiths, the decline of antique kinship, the interaction between capitalism and print, the development of secular languages-of-state, and changing conceptions of time and space. He shows how an originary nationalism born in the Americas was adopted by popular movements in Europe, by imperialist powers, and by the movements of anti-

imperialist resistance in Asia and Africa. In a new afterword,

The Work of Communication:

Relational Perspectives on Working and Organizing in Contemporary Capitalism revolves around a two-part question: "What have work and organization become under contemporary capitalism—and how should organization studies approach them?" Changes in the texture of capitalism, heralded by social and organizational theorists alike, increasingly focus attention on communication as both vital to the conduct of work and as imperative to organizational performance. Yet most accounts of communication in organization studies fail to understand an alternate sense of the "work of communication" in the constitution of organizations,

work practices, and economies.

This book responds to that lack by portraying communicative practices—as opposed to individuals, interests, technologies, structures, organizations, or institutions—as the focal units of analysis in studies of the social and organizational problems occasioned by contemporary capitalism. Rather than suggesting that there exists a canonically "correct" route communicative analyses must follow, *The Work of Communication: Relational Perspectives on Working and Organizing in Contemporary Capitalism* explores the value of transcending longstanding divides between symbolic and material

Forerunner

factors in studies of working and organizing. The recognition of dramatic shifts in technological, economic, and political forces, along with deep interconnections among the myriad of factors shaping working and organizing, sows doubts about whether organization studies is up to the vital task of addressing the social problems capitalism now creates. Kuhn, Ashcraft, and Cooren argue that novel insights into those social problems are possible if we tell different stories about working and organizing. To aid authors of those stories, they develop a set of conceptual resources that they capture under the mantle of communicative relationality. These resources allow analysts to profit from

Enclosure

burgeoning interest in notions such as sociomateriality, posthumanism, performativity, and affect. It goes on to illustrate the benefits that investigations of work and organization can realize from communicative relationality by presenting case studies that analyze (a) the becoming of an idea, from its inception to solidification, (b) the emergence of what is taken to be the "the product" in high-tech startup entrepreneurship, and (c) the branding of work (in this case, academic writing and commercial aviation) through affective economies. Taken together, the book portrays "the work of communication" as simultaneously about how work in the "new economy" revolves

Foreclosure

around communicative practice and about how communication serves as a mode of explanation with the potential to cultivate novel stories about working and organizing. Aimed at academics, researchers, and policy makers, this book's goal is to make tangible the contributions of communication for thinking about contemporary social and organizational problems.

This critical and empirically based volume examines the multiple existing Nordic models, providing analytically innovative attention to the multitude of circulating ideas, images and experiences referred to as "Nordic". It addresses related paradoxes as well as patterns of circulation, claims about the exceptionality of

Nordic models, and the diffusion and impact of Nordic experiences and ideas. Providing original case studies, the book further examines how the Nordic models have been constructed, transformed and circulated in time and in space. It investigates the actors and channels that have been involved in circulating models: journalists and media, bureaucrats and policy-makers, international organizations, national politicians and institutions, scholars, public diplomats and analyses where and why models have travelled. Finally, the book shows that Nordic models, perspectives, or ideas do not always originate in the Nordic region, nor do they always develop as deliberate

efforts to promote Nordic interests. This book will be of key interest to Nordic and

Scandinavian studies, European studies, and more broadly to history, sociology, political science, marketing, social policy, organizational theory and public management. marketplace now operates through every hour of the clock, pushing us into constant activity and eroding forms of community and political expression, damaging the fabric of everyday life. Jonathan Crary examines how this interminable non-time blurs any separation between an intensified, ubiquitous consumerism and emerging strategies of control and surveillance. He describes the ongoing management of individual attentiveness and the impairment of perception within the compulsory routines of contemporary technological culture. At the same time, he shows that human sleep, as a restorative withdrawal that is intrinsically incompatible with

Media power is a crucial, although often taken for granted, concept. We assume, for example, that the media are 'powerful'; if they were not, why would there be so many controversies over the regulation, control and impact of communicative institutions and processes? Further, we assume that this 'power' is somehow problematic; audiences are often treated as highly susceptible to media influence and too much 'power' in the hands of one organization or individual is seen as risky and potentially dangerous. These concerns have

been at the heart of recent controversies involving the relationships between media moguls and political elites, the consequences of phone hacking in the UK, and the emerging influence of social media as vital gatekeepers. Yet it is still not clear what we mean by media power or how effective it is. This book evaluates contrasting definitions of media power and looks at the key sites in which power is negotiated, concentrated and resisted - politically, technologically and economically. Combining an evaluation of both previous literature and new research, the book seeks to establish an understanding of media power which does justice to the complexities and

Why employees of pioneering Internet companies chose to invest their time, energy, hopes, and human capital in start-up ventures. In the dot-com boom of the late 1990s, employees of Internet startups took risks—left well-paying jobs for the chance of striking it rich through stock options (only to end up unemployed a year later), relocated to areas that were

epicenters of a booming industry (that shortly went bust), chose the opportunity to be creative over the stability of a set schedule. In *Venture Labor*, Gina Neff investigates choices like these made by high-tech workers in New York City's "Silicon Alley" in the 1990s. Why did these workers exhibit entrepreneurial behavior in their jobs—investing time, energy, and other personal resources that Neff terms "venture

In this systematic and mutual interrogation of radical democratic theory and Internet practice, contributors examine a range of democratic theories in relation to online communication and explore how such communication may advance democracy beyond what is conceptualized and practised within present liberal-capitalist political contexts.

The Discourses of Capitalism

Reveals how politics created our
media world, from the emergence of
the first newspapers & postal systems
in early modern Europe & colonial
Amer. to the rise of the mass press,
telecomm., motion pictures, &

broadcast. in the 20th cent. Starr shows how critical choices about freedom of expression, media ownership, the architecture of networks, secrecy, privacy, & intellectual property have made the modern media as much a political as a technological invention. The framework of commun. estab. in the U.S. has proved to be a source of econ. growth, cultural influence, & even mil. advantage. But the dilemma is that the media have also become a constellation of power in their own right, upsetting the vision of the role of the press in a democracy. From hashtag activism to the flood of political memes on social media, the landscape of political communication

is being transformed by the grassroots circulation of opinion on digital platforms and beyond. By exploring how everyday people assist in the promotion of political media messages to persuade their peers and shape the public mind, Joel Penney offers a new framework for understanding the phenomenon of viral political communication: the citizen marketer. Like the citizen consumer, the citizen marketer is guided by the logics of marketing practice, but, rather than being passive, actively circulates persuasive media to advance political interests. Such practices include using protest symbols in social media profile pictures, strategically tweeting links to

news articles to raise awareness about select issues, sharing politically-charged internet memes and viral videos, and displaying mass-produced T-shirts, buttons, and bumper stickers that promote a favored electoral candidate or cause. Citizens view their participation in such activities not only in terms of how it may shape or influence outcomes, but as a statement of their own identity. As the book argues, these practices signal an important shift in how political participation is conceptualized and performed in advanced capitalist democratic societies, as they casually inject political ideas into the everyday spaces and places of popular culture.

While marketing is considered a dirty word in certain critical circles -- particularly among segments of the left that have identified neoliberal market logics and consumer capitalist structures as a major focus of political struggle -- some of these very critics have determined that the most effective way to push back against the forces of neoliberal capitalism is to co-opt its own marketing and advertising techniques to spread counter-hegemonic ideas to the public.

Accordingly, this book argues that the citizen marketer approach to political action is much broader than any one ideological constituency or bloc.

Rather, it is a means of promoting a wide range of political ideas, including

those that are broadly critical of elite uses of marketing in consumer capitalist societies. The book includes an extensive historical treatment of citizen-level political promotion in modern democratic societies, connecting contemporary digital practices to both the 19th century tradition of mass political spectacle as well as more informal, culturally-situated forms of political expression that emerge from postwar countercultures. By investigating the logics and motivations behind the citizen marketer approach, as well as how it has developed in response to key social, cultural, and technological changes, Penney charts the evolution of activism in an age of mediatized

politics, promotional culture, and viral circulation.

communication and society by engaging with the dialectic, materialism, society, work, labour, technology, the means of communication as means of production, capitalism, class, the public sphere, alienation, ideology, nationalism, racism, authoritarianism, fascism, patriarchy, globalisation, the new imperialism, the commons, love, death, metaphysics, religion, critique, social and class struggles, praxis, and socialism. Fuchs renews the engagement with the questions of what it means to be a human and a humanist today and what dangers humanity faces today.

This volume explores activism, research and critique in the age of

digital subjects and objects and Big Data capitalism after a digital turn said to have radically transformed our political futures. Optimists assert that the ‘ digital ’ promises: new forms of community and ways of knowing and sensing, innovation, participatory culture, networked activism, and distributed democracy. Pessimists argue that digital technologies have extended domination via new forms of control, networked authoritarianism and exploitation, dehumanization and the surveillance society. Leading international scholars present varied interdisciplinary assessments of such claims – in theory and via dialogue – and of the digital ’ s impact on society and the

potentials, pitfalls, limits and ideologies, of digital activism. They reflect on whether computational social science, digital humanities and ubiquitous datafication lead to digital positivism that threatens critical research or lead to new horizons in theory and society. Psychoanalysis and Digital Culture offers a comprehensive account of our contemporary media environment—digital culture and audiences in particular—by drawing on psychoanalysis and media studies frameworks. It provides an introduction to the psychoanalytic affect theories of Sigmund Freud and Didier Anzieu and applies them

theoretically and methodologically in a number of case studies.

Johanssen argues that digital media fundamentally shape our subjectivities on affective and unconscious levels, and he critically analyses phenomena such as television viewing, Twitter use, affective labour on social media, and data-mining. How does watching television involve the body? Why are we so drawn to reality television? Why do we share certain things on social media and not others? How are bodies represented on social media? How do big data and data mining influence our identities? Can algorithms help us make better decisions? These questions

amongst others are addressed in the chapters of this wide-ranging book. Johanssen shows in a number of case studies how a psychoanalytic angle can bring new insights to audience studies and digital media research more generally. From audience research with viewers of the reality television show Embarrassing Bodies and how they unconsciously used it to work through feelings about their own bodies, to a critical engagement with Hardt and Negri's notion of affective labour and how individuals with bodily differences used social media for their own affective-digital labour, the book suggests that an understanding of affect based on Freud and Anzieu is

helpful when thinking about media use. The monograph also discusses the perverse implications of algorithms, big data and data mining for subjectivities. In drawing on empirical data and examples throughout, Johanssen presents a compelling analysis of our contemporary media environment. Media scholars, artists, activists, and journalists discuss how the uses of the emerging "Social Web" redefine the public sphere and influence mainstream journalism. In an age of proliferating media and news sources, who has the power to define reality? When the dominant media declared the existence of WMDs in Iraq, did that make it a fact? Today, the "Social

Web” (sometimes known as Web 2.0, groupware, or the participatory web)—epitomized by blogs, viral videos, and YouTube—creates new pathways for truths to emerge and makes possible new tactics for media activism. In Digital Media and Democracy, leading scholars in media and communication studies, media activists, journalists, and artists explore the contradiction at the heart of the relationship between truth and power today: the fact that the radical democratization of knowledge and multiplication of sources and voices made possible by digital media coexists with the blatant falsification of information by political and corporate powers. The book maps a new digital media

landscape that features citizen journalism, The Daily Show, blogging, and alternative media. The contributors discuss broad questions of media and politics, offer nuanced analyses of change in journalism, and undertake detailed examinations of the use of web-based media in shaping political and social movements. The chapters include not only essays by noted media scholars but also interviews with such journalists and media activists as Amy Goodman of Democracy Now!, Media Matters host Robert McChesney, and Hassan Ibrahim of Al Jazeera. Contributors and Interviewees Shaina Anand, Chris Atton, Megan Boler, Axel Bruns, Jodi Dean, Ron

This book is a critique of the public sphere, both as the centrepiece of some liberal theory about political communications, and as a description of actually existing media practice in Ireland and beyond - in traditional commercial news media and in social media. Written in an accessible style, but with endnotes as necessary, it is a call to more and deeper critical thinking about media, old and new, as well as a consideration of the communicative needs of a present and future movement for transformative political and economic change. The book introduces the public sphere as an historic idea and ideal, a place where democratic subjects deliberate and ensure civil society has a voice at the table of state. It challenges that idea, both in terms of its limitations in a globalised economy and its ultimately technocratic-consensual model

of politics, its evasion of what Laclau and Mouffe call 'the ineradicability of antagonism'. It also begins a political-economy critique of the media, the presumed home of the public sphere in the post-18th-century-coffeehouse era. What we can and can't learn by looking at media behaviour through the lens of its proprietors' commercial interests is discussed. The biases of broadcasters and newspapers in the recent economic crisis are considered, along with the pressures and consequences of declining print circulation and migration of advertising online, as well as some initial questions about pluralism and the continuing important role of the public service media, in Ireland and elsewhere. This chapter includes an extensive review of previously unpublished results of a study into newspaper coverage of the Irish movement against the Iraq war. Public Sphere also

moves the discussion online, where, though nearly infinite pluralism appears to rule the day, power and freedom are more elusive.

Under the regime of 'communicative capitalism', we are all 'content providers', generally without remuneration. The continuing centrality of advertising and corporate power in digital media underlines the need to keep our eyes on the money even when talking about a networked information environment. The familiar question of whether online engagement acts as a substitute for 'real world' politics is supplemented, in this chapter, with an examination of the 'real' content of virtual politics, and of whether we can explain some of the weirdest recent turns in the global political journey in light of special features of the online world, such as the 'fake news' that is widely supposed to have elected Donald Trump. Finally, we look at media alternatives, if

any, to the corporate control of potentially transformative communications. Although I regard the concept of the public sphere as hopelessly inadequate at best, I do, in keeping with the theme of the Sireacht series, seek to imagine a healthier environment for public communication in the context of a better Ireland and a better world.

Antonio Negri wrote the two essays that comprise *Time for Revolution* while serving a prison sentence for alleged involvement with radical left-wing groups. Although the essays were written two decades apart, their concerns are the same: is there a place for resistance in a society utterly subsumed by capitalism? In the wake of the global crisis of capitalism heralded by the 2008 crash, the question has never been more relevant and Negri remains an insightful and passionate guide to any attempt to answer it.

"In this book, Onar Ulas Ince combines an analysis of political economy with normative political theory to examine the formative impact of colonial economic relations on the historical development of liberal thought in Britain. Focusing on the centrality of liberal economic principles to Britain's self-image as a peaceful commercial society, Ince investigates some of the key historical moments in which these principles were thrown into question by the processes of forcible expropriation and exploitation that typified the British imperial economy as a whole. As he shows, such illiberal economic policies systematically challenged the liberal conception of commercial capitalism in Britain and the British national identity that was predicated on it. Specifically, such core tenets of liberalism as private property, market exchange, and free labor could be construed as progressive,

emancipatory, and normatively universal only to the extent that Britain's colonial economic practices that contravened them were disavowed in political theory. In short, classical liberal economic theorists had to mentally compartmentalize theory from the disturbing facts on the ground. The case of the British imperial economy is especially important given Britain's role in disseminating liberal thought globally, but Ince's novel framework applies equally to other episodes as well, up to and including the contemporary American imperium"--

Scandals are revealed, details are laid bare because "the public needs to know." In Publicity's Secret, Jodi Dean claims that the public's demands for information both coincide with the interests of the media

industry and reinforce the cynicism promoted by contemporary technoculture. Democracy has become a spectacle, and Dean asserts that theories of the "public sphere" endanger democratic politics in the information age. Dean's argument is built around analyses of Bill Gates, Theodore Kaczynski, popular journalism, the Internet and technology, as well as the conspiracy theory subculture that has marked American history

from the Declaration of Independence to the political celebrity of Hillary Rodham Clinton. The author claims that the media's insistence on the public's right to know leads to the indiscriminate investigation and dissemination of secrets. Consequently, in her view, the theoretical ideal of the public sphere, in which all processes are transparent, reduces real-world politics to the drama of the secret

and its discovery.

What unites Google and Facebook, Apple and Microsoft, Siemens and GE, Uber and Airbnb?

Across a wide range of sectors, these firms are transforming themselves into platforms:

businesses that provide the hardware and software foundation for others to operate on.

This transformation signals a major shift in how capitalist firms operate and how they interact with the rest of the economy: the

critically examines

these new business

forms, tracing their

genesis from the long

downturn of the 1970s to

the boom and bust of the

aftershocks of the 2008

crisis. It shows how the

capitalism that pose significant challenges to any vision of a post-capitalist future. This book will be essential reading for anyone who wants to understand how the most powerful tech companies of our time are transforming the global economy."

Blog Theory offers a critical theory of contemporary media. Furthering her account of communicative capitalism, Jodi Dean explores the ways new media practices like

blogging and texting capture their users in intensive networks of enjoyment, production, and surveillance. Her wide-ranging and theoretically rich analysis extends from her personal experiences as a blogger, through media histories, to newly emerging social network platforms and applications. Set against the background of the economic crisis wrought by neoliberalism, the book engages with recent work

in contemporary media theory as well as with thinkers such as Giorgio Agamben, Jean Baudrillard, Guy Debord, Jacques Lacan, and Slavoj Žižek. Through these engagements, Dean defends the provocative thesis that reflexivity in complex networks is best understood via the psychoanalytic notion of the drives. She contends, moreover, that reading networks in terms of the drives enables us to grasp their real, human

dimension, that is, the feelings and affects that embed us in the system. In remarkably clear and lucid prose, Dean links seemingly trivial and transitory updates from the new mass culture of the internet to more fundamental changes in subjectivity and politics. Everyday communicative exchangesÑfrom blog posts to text messagesÑhave widespread effects, effects that not only undermine

capacities for democracy but also entrap us in circuits of domination. This volume brings together works written by international theorists since the fall of the Berlin Wall, showing how today's crisis-ridden global capitalism is making Marxist theory more relevant and necessary than ever. This collection of key texts by prominent and lesser-known thinkers from Latin America, Asia, Africa, America, and

Europe showcases an area of scholarly analysis whose impact on academic and popular discourses as well as political action will only grow in the coming years. It reflects today's sense of planetary eco-emergency and a heightened interest in political economy that follows discontentment with the growing inequalities in the West and the unequal nature of development in the "global South." The work is organized

thematically, with sections covering the present historical conjuncture, the contemporary shapes of the social, philosophical concepts, theories of culture, and the status of the political today. This new formulation of the unity and nature of contemporary Marxist theory will be an invaluable resource to any humanities and social science student learning about social and political thought

Since the global economic crisis of 2007-2008, 'capitalism' has been the topic of widespread general discussion in both mainstream and social media. In this book, Christian W. Chun examines the discourses of capitalism taken up by people in their responses to a street art installation created by Steve Lambert, entitled Capitalism Works for Me! In doing so, he considers several key questions, including: How do

everyday people view and make sense of capitalism and its role in their work and personal lives? What are the discourses they use in their common-sense understandings of the economy to defend or reject capitalism as a system? Chun looks at how dominant discourses in social circulation operate to co-construct and support capitalism, and the accompanying counter-discourses that critique it. This is key reading for advanced students of discourse analysis, language and globalization/politics, media/communication studies, and related areas. A video

This book is a key resource on the foundations of Marxist Media, Cultural and Communication Studies. It presents 18 contributions that show how Marx's analyses of capitalism, the commodity, class, labour, work, exploitation, surplus-value, dialectics, crises, ideology, class struggles, and

communism help us to understand media, cultural and communications in 21st century informational capitalism.

Investigations of affective experiences that emerge in online settings that range from Facebook discussion forums to “smart” classrooms. Our encounters with websites, avatars, videos, mobile apps, discussion forums, GIFs, and nonhuman intelligent agents allow us to experience sensations of connectivity, interest, desire, and attachment—as well as detachment, boredom, fear, and shame. Some affective

online encounters may arouse complex, contradictory feelings that resist dualistic distinctions. In this book, leading scholars examine the fluctuating and altering dynamics of affect that give shape to online connections and disconnections. Doing so, they tie issues of circulation and connectivity to theorizations of networked affect. Their diverse investigations—considering subjects that range from online sexual dynamics to the liveliness of computer code—demonstrate the value of affect theories for Internet studies. The contributors

investigate networked affect in terms of intensity, sensation, and value. They explore online intensities that range from Tumblr practices in LGBTQ communities to visceral reactions to animated avatars; examine the affective materiality of software in such platforms as steampunk culture and nonprofit altporn; and analyze the ascription of value to online activities including the GTD (“getting things done”) movement and the accumulation of personal digital materials. Communication and Capitalism

Empire's New Clothes

This volume investigates our dissonant and exuberant existences online. As social media users we know we're under surveillance, yet we continue to click, like, love and share ourselves online as if nothing

was. So, how do we overcome the current online identity regime? Can we overthrow the rule of Narcissus and destroy the planetary middle class subject? In this catalogue of strategies, the reader will find stories on hacker groups, gaming platforms in the occupied territories, art objects, selfies, augmented reality, Gen Z autoethnographies, love and life. The authors of this anthology believe we cannot simply put vanity aside and a rational analysis of platform capitalism is not going to convince the youngs on TikTok nor liberate us from Zuckerbergian indentured servitude. Do we really need to wade through the subjective mud and 'learn more' about online aesthetics? The answer is yes. Writing by Wendy Chun, Franco Berardi "BIFO", Julia Preisker,

The digital world profoundly shapes how we work and consume and also how we play, socialize, create identities, and engage in politics and civic life. Indeed, we are so enmeshed in digital networks—from social media to cell phones—that it is hard to conceive of them from the outside or to imagine an alternative, let alone defy their seemingly inescapable power and logic. Yes, it is (sort of) possible to quit Facebook. But is it possible to disconnect from the digital network—and why might we want to? *Off the Network* is a fresh and authoritative examination of how the hidden logic of the Internet, social media, and the digital network is changing users' understanding of the world—and why that should worry us. Ulises Ali Mejias

also suggests how we might begin to rethink the logic of the network and question its ascendancy. Touted as consensual, inclusive, and pleasurable, the digital network is also, Meijas says, monopolizing and threatening in its capacity to determine, commodify, and commercialize so many aspects of our lives. He shows how the network broadens participation yet also exacerbates disparity—and how it excludes more of society than it includes. Uniquely, Meijas makes the case that it is not only necessary to challenge the privatized and commercialized modes of social and civic life offered by corporate-controlled spaces such as Facebook and Twitter, but that such confrontations can be mounted from both within and outside the network.
