Inhaltsangabe:Abstract: This Master thesis explores the organisational change, as performed by Toyota after World War II which, within decades, made this company the most successful automobile producer in the world and a model of corporate governance. Japanese automobile industry that soon it was copied all over the world. The details of this system, which is to a huge amount based on practical experience and which requires a huge amount of preparatory work, are sufficiently known within the industry. Nevertheless, other Japanese companies and, in particular, international companies fail to catch up with Toyota. The question is, why? Quite a number of car manufacturers already produce according to lean principles, as the TPS instruments are sometimes called, quite successfully, as it seems, and nevertheless they lag behind the performance of Toyota. A highly saturated North American and European automobile market requires

thorough change, since companies, due to an increasing global competition, need to undergo some kind of change to survive in the market. Experts assume further consolidation among Original Equipment Manufacturers (OEM) until 2010. Although everything seems to be known about TPS, there is obviously a remainder, because otherwise there would be more Toyotas than just one. There must be something in TPS that has not been identified or has been left out so far by the majority of OEMs all over the world. (Judging from the current competition in the automotive industry, it is more likely that this something has been unintentionally ignored). This is the case although the whole system, without any

restrictions, is made accessible to competitors and anyone interested in TPS. Obviously, the knowledge of this mostly missing aspect or link in TPS is restricted, because in the current situation in the automotive industry no company can afford giving away any chances. This master thesis aims at identifying and preparing the above mentioned, apparently hidden or unintentionally ignored, aspects of the Toyota Production System (TPS) which make Toyota more successful than other car makers. Within two years, Lexus had overtaken Mercedes-Benz in the United States and made a stunning success of Toyota's brave foray into the global luxury market. industry is suffering from low productivity, increasing customer requirements and frequently occurring quality issues, although food safety is of utmost importance. The Toyota Production System was found capable to address all these issues both in its incumbent automotive sector and subsequently also in other industries. After identifying the dominant authors in the body of literature and classifying the extant literature into epochs, the research objectives for the study are addressed. These included an investigation of the drivers for lean implementation, the obstructing and facilitating factors, the performance outcomes of lean implementation and the lean practices that are

predominantly described. With regards to the latter, also adaptations that were made to the lean methodology are presented. The most important findings include that lean methodology is already being used in the European food and beverage industry, even though only to a rather limited extent. Moreover, industry characteristics are found to present obstacles to lean implementation. Especially volatile demand patterns that are contrasted by production to forecast make it difficult to avoid overproduction. Also, natural variation and perishability of materials can make the adoption of lean principles challenging. However, although the body of literature does not provide a solution for all obstacles, some

presented adaptations to the lean methodology can address at least some of them. In the end, the concluding assessment is made that the Toyota Production System can be seen as applicable to the European food and beverage industry. However, industry characteristics make it at times necessary to adapt the lean methodology creatively.

While these companies are global players, they must increasingly be aware of, and evolve in response to, European economic integration. The strategy setting and management are influenced by

The locational and entry strategies are based both on the multinationals' own resources and capability, and on the changing locational conditions, while pan-European management is conducted to achieve the benefits of 'multinationality' at the regional level. The mutual relationships between the location of subsidiaries, the entry mode, and the pan-European operation are clearly shown from the detailed analysis at the company level. The Global status report on road safety 2018 launched by WHO in December 2018 highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians cyclists and motorcyclists in particular those living in developing countries. The report suggests that the price paid for mobility is too high especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

investments in carefully selecting and intensively developing leaders who fit its unique philosophy and culture. Thanks to the company's lean leadership approach, explains Toyota Way author Jeffrey Liker and former Toyota executive Gary Convis, the celebrated carmaker has set into motion a drive for continuous improvement at all levels of its business. This has allowed for: Constant growth: Toyota increased profitability for 58 consecutive years—slowing down only in the face of 2008's worldwide financial difficulties, the recall crisis, and the worst Japanese earthquake of the century. Unstoppable inventiveness: Toyota's approach to innovative thinking and problem solving has resulted in top industry ratings and incredible customer satisfaction, while allowing the company to weather these three crises in rapid succession and to come out stronger. reputation was instrumental in the company's ability to withstand the recalls-driven media storm of 2010. But what looked to some to be a sinking ship is once again running under a full head of steam. Perhaps the Toyota culture had weakened, but lean leadership was the beacon that showed the way back. In fact, writes Liker, the company is "as good and perhaps a better model for lean leadership than it ever has been." of innovation and growth. Yet, Industry Week reports that just 2 percent of companies using lean processes can likewise claim to have had long-term success. What the other 98 percent lack is unified leadership with a common method and philosophy. If you want to get lean, you have to take it to the leadership level. Motors, where he directly led the establishment of the most revolutionary labor-management agreement in the history of the US auto industry. In addition, Furuta was the first Toyota employee on the ground in Georgetown Kentucky at Toyota's first full-scale, wholly owned manufacturing operation outside Japan, where he led (working directly with President Fujio Cho) the establishment of Toyota's general management systems and culture there. critical leaders in Toyota's history, such as Taiichi Ohno and Fujio Cho as well as Kenzo Tamai, the head of the company's HRM function in the 1980s. This book is not about human-resource management (HRM) policies and procedures. It provides a deep dive into the way senior leaders embody deep awareness of HRM matters, developing and executing company strategy while at the same time developing organizational capability. The role of senior leaders isn't just a matter of directing the company to achieve objectives; it is a matter of building the capability to achieve those objectives, consistently, and further developing capability as it executes. Key to this is to develop the awareness, attitude, capability, and practice of identifying problems as progress is made

toward achieving objectives, which is, in fact, attained through steadily eliminating each problem as it arises. This becomes a self-reinforcing loop of the organization, tapping in to the essence of solving problems while simultaneously developing ever better problem-solving skills and better problem solvers. This loop propels an organization toward meeting its purpose while developing capability for capability development. Essentially, this book reveals Toyota's general management systems from the firsthand experience of a Toyota Japanese senior manager and describes, with stories and process examples, the attitude, behaviors, and systems needed to successfully establish and lead in a true Lean business environment.
