The topics
addressed are of
genuine use in
computer science,
and are presented
in a logically
coherent fashion.
The material has
been organized
and interrelated to
minimize the mass

of definitions and the abstraction of some of the theory. For example, relations and directed graphs are treated as two aspects of the same mathematical idea. Whenever possible each new idea

uses previously encountered material, and then developed in such a way that it simplifies the more complex ideas that follow.
