This textbook, in its second edition aims to provide undergraduate students of Electrical Engineering with a unified treatment of all aspects of modern power systems, including generation, transmission and distribution of electric power, load flow studies, economic considerations, fault analysis and stability, high voltage phenomena, system protection, power control, and so on. The text systematically deals with the fundamental techniques in power systems, coupled with adequate analytical techniques and reference to practices in the field. Special emphasis is placed on the latest developments in power system engineering. The book will be equally useful to the postgraduate students specialising in power systems and practising engineers as a reference. NEW TO THIS EDITION • Chapters on Elements of Electric Power Generation and Power System Economics are thoroughly updated. • A new Chapter on Control of Active and Reactive Power is added.

First published in 1997. Routledge is an imprint of Taylor & Francis, an informa company.

Authored by members of the British Bobath Tutors Association, Bobath Concept: Theory and Clinical Practice in Neurological Rehabilitation is a practical illustrated guide that offers a detailed exploration of the theoretical underpinning and clinical interventions of the Bobath Concept. The evolution of the Bobath concept is brilliantly captured in this volume. The recognition that the best inhibition may come from engaging the patient in normal activities is an example of the way one of the notions central to the original Bobath Concept has developed. In short, the Bobath Concept lies at the heart of an approach to neurorehabilitation that is ready to take advantage of the rapidly advancing understanding, coming from neuroscience, of brain function in, in particular, of the effects of and responses to damage, and the factors that may drive recovery. It is no coincidence that neuroplasticity figures so prominently in the pages that follow.' Emeritus Professor Raymond Tallis BM BCh BA FRCP FMedSci LittD DLitt FRSA This book guides the reader through general principles to more specific application of neurophysiological principles and movement re-education in the recovery of important areas, including moving between sitting and standing, locomotion and recovery of upper limb function. Bobath Concept: Theory and Clinical Practice in Neurological Rehabilitation will be invaluable to undergraduate and qualified physiotherapists /occupational therapists and all professionals working in neurological rehabilitation. Covers the theoretical underpinning of the Bobath Concept. Presents a holistic, 24-hour approach to functional recovery. Focuses on efficient movement and motor learning, to maximise function. Forges links between theory and clinical practice. Illustrated throughout.

The objective of Risk Analysis in Theory and Practice is to present this analytical framework and to illustrate how it can be used in the investigation of economic decisions under risk. In a sense, the economics of risk is a difficult subject: it involves understanding human decisions in the absence of perfect information. How do we make decisions when we do not know some of events affecting us? The complexities of our uncertain world and of how humans obtain and process information make this difficult. In spite of these difficulties, much progress has been made. First, probability theory is the corner stone of risk assessment. This allows us to measure risk in a fashion that can be communicated among decision makers or researchers. Second, risk preferences are now better understood. This provides useful insights into the economic rationality of decision making under uncertainty. Third, over the last decades, good insights have been developed about the value of information. This helps better understand the role of information in human decision making and this book provides a systematic treatment of these issues in the context of both private and public decisions under uncertainty. Balanced treatment of conceptual models and applied analysis Considers both private and public decisions under uncertainty

Theory and Practice of Contrast

Over the last decade the notion of 'threshold concepts' has proved influential around the world as a powerful means of exploring and discussing the key points of transformation that students experience in their higher education courses and the 'troublesome knowledge' that these often present.

Good or bad level design can make or break any game, so it is surprising how little reference material exists for level designers. Beginning level designers have a limited understanding of the tools and techniques they can use to achieve their goals, or even define them. This book is the first to use a conceptual and theoretical foundation to build

This important new book develops a new concept of autonomy. The notion of autonomy has emerged as central to contemporary moral and political philosophy, particularly in the area of applied ethics. professor Dworkin examines the nature and value of autonomy and uses the concept to analyse various practical moral issues such as proxy consent in the medical context, paternalism, and entrapment by law enforcement officials.

The Theory of Architecture Concepts, Themes & Practices Paul-Alan Johnson Although it has long been thought that theory directs architectural practice, no one has explained precisely how the connection between theory and practice is supposed to work. This guide asserts that architectural theory does not direct practice, but is itself a form of reflective practice. Paul-Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field. He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation. Nearly 100 major concepts, themes, and practices of architecture—as well as the rhetoric of architects and designers—are presented in an easily accessible format. Throughout, Johnson attempts to reduce each architectural notion into its essential concept. By doing so, he makes theory accessible for everyday professional discussion. Topics are arranged under ten headings: identification, definition, power, attitudes, ethics, order, authority, governance, relationship, and expression. Areas covered under these headings include: * Utopic thought in theories of architecture * Advocacy and citizen participation in architecture * The basis of architectural quality and excellence * The roles of the architect as artist, poet, scientist, and technologist * Ethical obligations of architecture * Rationales for models and methods of design * How authority is determined in architecture * How architects structure their concepts * Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed, along with a summary history of the topic's use in architecture. Discussions probe the conceptual and philosophical difficulties of different theories, as well as their potential and limitations in past and present usage. Among the provocative issues discussed in terms of their relationship to architecture are chaos theory, feminism, service to the community, and the use of metaphor. Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts. All architects and designers, as well as students and teachers in these disciplines, will gain many insights about architectural thought in this groundbreaking text.

Risk Analysis in Theory and Practice

Taking a critical and historical view, this text explores the theory and changing practice of international development. It provides an overview of how the field has evolved and the concrete impacts of this on the ground on the lives of people in the Global South. Development Theory and Practice in a Changing World covers the major theories of development, such as modernisation and dependency, in addition to anti-development theories such as post-modernism and decoloniality. It examines the changing nature of immanent (structural) conditions of development in addition to the main attempts to steer them (imminent development). The book suggests that the era of development as a hegemonic idea and practice may be coming to an end, at the same time as it appears to have achieved its apogee in the Sustainable Development Goals as a result of the rise of ultra-nationalism around the world, the increasing importance of securitisation and the existential threat posed by climate change. Whether development can or should survive as a concept is interrogated in the book. This book offers a fresh and updated take on the past 60 years of development and is essential reading for advanced undergraduate students in areas of development, geography, international studies, political science, economics and sociology.

"I cannot remember when I last read a nursing text and felt the same sense of relief: at last we have a resource which brings together the mass of concepts, theories and practice issues which are so fundamental to children's nursing. What is unique about this book is that it really does take the step of putting theories into practice. This book would make an excellent introduction for those wanting to increase their level of expertise in working with children and families at any stage in their careers." - extract from The Foreword by Anne Casey - Editor of Paediatric Nursing. Family centred care is the cornerstone of Children's Nursing practice and this engaging and comprehensive text introduces both the theoretical and practical components of this important concept. The authors analyse current issues surrounding family centred care and provide readers with a unique Continuum for Practice that will enable them to implement the concept both in the community and in hospital based settings. The text is clearly structured into the following three parts: Part One provides a definition of family centred care and a Practice Continuum. Part Two is an analysis of current perspectives, issues and challenges impinging on family centred care. Part Three addresses the skills required to actually practice family centred care so that it can become a reality for children, families and nurses. The underlying principles of family centred care are presented as frameworks grounded in the realities of day-to-day practice. In this way the reader is equipped with a toolkit that they can use to develop their expertise, at their own pace in their individual care environment. Family Centred Care will be essential reading for all student and qualified nurses working with children and their families in a variety of health care settings.

Social work is a discipline committed to social justice and human rights, and to improving the well-being of individuals, families, communities and societies. But the world is changing, with environmental disasters, an increase in violent conflict and the aftermath of the Global Financial Crisis impacting negatively on human and ecological well-being. Social workers are often working at the forefront of these and other challenging situations, and they must apply knowledge and skills to their practice in a thoughtful and ethical way. What kind of knowledge and skills will social workers need to succeed in this intellectually and emotionally demanding job? Broad-ranging in scope and depth, this highly readable text introduces readers to the key concepts in social work - such as empathy, reflective practice and notions of risk - and provides both a focus on the theory and research literature that informs each one, and an examination of how each will aid practitioners in their day-to-day work. With the help of engaging practice examples that contextualize the topics under discussion, the book also draws on ideas and literature from other disciplines - including philosophy, sociology and psychology - in order to promote the open-mindedness and depth of understanding required for practice with people from all walks of life. An accessible text that brings all of the major social work concepts together in one place, Key Concepts and Theory in Social Work is an essential book for students and practitioners alike.

THEORY AND PRACTICE OF GROUP COUNSELING, 9th Edition, gives students an in-depth overview of the eleven group counseling theories. In addition to illustrating how to put these theories into practice, this best-selling text guides students in developing their own syntheses of various aspects of the theories. With Corey's clear, straightforward writing style, students are able to grasp each theoretical concept and its relationship to group practice with ease. The book Theory and Practice of Contrast completes, corrects and integrates the foundations of science and humanities, which include: theory of art, philosophy (aesthetics, epistemology, ontology, axiology), cognitive science, theory of information, theory of complexity and physics. Through the integration of these distant disciplines, many unresolved issues in contemporary science have been clarified or better understood, among others: defining impact (contrast) and using this definition in different fields of knowledge; understanding what beauty/art is and what our aesthetic preferences depend on; deeper understanding of what complexity and information are in essence, and providing their general definitions. Complexity means integration, value and goodness - concepts that seem to be neglected today. The book also has a high degree of integration/complexity, although each chapter introduces a new issue. The last chapter: "Binary Model of the Universe" draws attention to the need for including in physics the analysis of our mind and the resulting new possibilities, which include the mentioned (digital) model of the universe. Despite the difficult issues raised here, this study is written in accessible language and may be interesting not only for scientists and academics.

Through Pierre Bourdieu's work in Kabylia (Algeria), he develops a theory on symbolic power.

Social workers have been involved in social development for many years, but it is only recently that these ideas have been explicitly applied to social work practice. The result is that a new and distinctive approach to social work practice known as developmental social work has emerged. Developmental social work emphasizes the role of social investment in professional practice. These investments meet the material needs of social work's clients and facilitate their full integration into the social and economic life of the community. Developmental social workers believe that client strengths and capabilities need to be augmented with public resources and services if those served by the profession are to live productive and fulfilling lives. Although developmental social work is inspired by international innovations, particularly in the developing countries, it highly relevant to practice in the United States and other Western nations. In the first book to lay out a clear framework for developmental social work practice, chapters will focus on the traditional fields of social work practice, showing how social investment strategies can be adopted by social workers in their daily practice with populations including families and children, people with mental illness, homeless youth, people with disabilities, the elderly, and those in the correctional system. By facilitating clients' full social and economic participation through a variety of strategies, such as microenterprise or asset-building programs, practitioners can help bring about meaningful changes in clients' lives and throughout their communities. The editors and contributors offer a highly original exposition of developmental social work theory and practice, providing a definitive guide to an emerging and exciting new approach to practice.

Concepts in Composition: Theory and Practice in the Teaching of Writing is designed to foster reflection on how theory impacts practice, enabling prospective teachers to develop their own comprehensive and coherent conception of what writing is or should be and to consider how people learn to write. This approach allows readers to assume the dual role of both teacher and student as they enter the conversation of the discipline and become familiar with some of the critical issues. New to this second edition are: up-to-date primary source readings; a focus on collaborative writing practices and collaborative learning; additional assignments and classroom activities an emphasis on new media and information literacy and their impact on the teaching of writing These new directions will inform the content of this revision, reflecting significant advancements in the field. Each chapter addresses a particular theoretical concept relevant to classroom teaching and includes activities to help readers establish the connection between theoretical concepts and classroom lessons. Online resources include overviews, classroom handouts, exercises, a sample syllabus, and PowerPoint presentations. Bringing together scholars with expertise in particular areas of composition, this text will serve as an effective primer for students and educators in the field of composition theory.

This introductory text explains, and places in an historical context, the development theories behind contemporary debates, such as globalization. The author describes and explains how approaches to development have changed over time and how approaches vary spatially.

Three principal areas of study are represented in this collection. One is historical research, which includes efforts to trace the development of theoretical ideas and their philosophical bases; the second area embraces the theory and analysis of common-practice tonality and its associated repertoire (including chromatic and transitional music); the third broad category includes the large body of work associated with theory and analysis of post-tonal music.

Video Production Techniques is an essential guide to the art and craft of video production. It introduces students to the theoretical foundations as well as the practical skills needed to make a successful video project. The opening chapter introduces the reader to the language of motion pictures and sets the stage for effective visual storytelling. Unit I guides students through the theory, techniques, and processes of writing, shooting, and editing video productions. Unit II expands on these basic principles to explore the crafts of sound recording/design, lighting, and directing. Unit III surveys the industries, formats, and methods for creating fiction and nonfiction programs. The final unit of the text examines options for distribution and career opportunities in video production. Newly updated and revised, the second edition of Video Production Techniques unifies theory and practice for instructors and students. It is a great tool for use in introductory-level video production courses and for the independent learner. The accompanying companion website features instructor resources including a sample syllabus, quiz bank, sample assignments, and PowerPoint slides for each chapter, alongside illustrative video demonstrations for students.

Crucial Concepts in Argumentation Theory is a collection of essays that discuss a series of important issues in the study of argumentation. The essays describe the concepts that are crucial to argumentational research and the various ways these concepts have been approached. The essays explore such issues as points of view, unexpressed premises, argument schemes, argumentation structures, fallacies, argument interpretation and reconstruction, and argumentation in law. Each of the essays provides interested readers with an overview of the literature that can serve as a point of departure for further study.

"Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice, and the learning experiences of their students, through the lens of the Threshold Concepts Framework. In any discipline, there are certain concepts — the 'jewels in the curriculum' — whose acquisition is akin to passing through a portal. Learners enter new conceptual (and often affective) territory. Previously inaccessible ways of thinking or practising come into view, without which they cannot progress, and which offer a transformed internal view of subject landscape, or even world view. These conceptual gateways are integrative, exposing the previously hidden interrelatedness of ideas, and are irreversible. However they frequently present troublesome knowledge and are often points at which students become stuck. Difficulty in understanding may leave the learner in a 'liminal' state of transition, a 'betwixt and between' space of knowing and not knowing, where understanding can approximate to a form of mimicry. Learners navigating such spaces report a sense of uncertainty, ambiguity, paradox, anxiety, even chaos. The liminal space may equally be one of awe and wonderment. Thresholds research identifies these spaces as key transformational points, crucial to the learner's development but where they can oscillate and remain for considerable periods. These spaces require not only conceptual but ontological and discursive shifts. This volume, the fourth in a tetralogy on Threshold Concepts, discusses student experiences, and the curriculum interventions of their teachers, in a range of disciplines and professional practices including medicine, law, engineering, architecture and military education. Concepts embody our knowledge of the kinds of things there are in the world. Tying our past experiences to our present interactions with the environment, they enable us to recognize and understand new objects and events. Concepts are also relevant to understanding domains such as social situations, personality types, and even artistic styles. Yet like other phenomenologically simple cognitive processes such as walking or understanding speech, concept formation and use are maddeningly complex. Research since the 1970s and the decline of the "classical view" of concepts have greatly illuminated the psychology of concepts. But persistent theoretical disputes have sometimes obscured this progress. The Big Book of Concepts goes beyond those disputes to reveal the advances that have been made, focusing on the major empirical discoveries. By reviewing and evaluating research on diverse topics such as category learning, word meaning, conceptual development in infants and children, and the basic level of categorization, the book develops a much broader range of criteria than is usual for evaluating theories of concepts.

Emerging from the first degree-granting program in drama therapy, this text is the first to examine drama therapy as a discipline. It deals not with drama in therapy but with drama therapy itself, documenting its legitimacy as a distinct field. After reviewing its dramatic and psychotherapeutic context, the author examines the conceptual basis of drama therapy, tracing its interdisciplinary sources and delineating important concepts from related fields. A theoretical model of drama therapy is offered, based on the source material. The most widely practiced techniques of drama therapy are examined, including psychodramatic practices and projective techniques. The author also focuses on appropriate populations and settings: the emotionally, physically, socially, and developmentally disabled in schools, clinics, hospitals, prisons, and other environments. Special attention is directed to therapeutic theatre performances. The text concludes with reports of research, past, present, and future, and offers observations based upon the significant role drama therapy can play in fostering balance within individuals and among peoples.

This book offers an accessible, practical and engaging guide that provides sample instructional activities supported by theoretical background information, with a focus on the nature of the instructional process in relation to several variables. It approaches instructional models, strategies, methods, techniques, tactics and planning from a new perspective and shares effective tips to help readers better understand the instructional process and its theoretical elements. The book addresses the following questions: What is the nature of the instructional process? What are the classifications of contemporary models and strategies developed within the instructional process? Which groups yield the most effective methods and techniques, and how can they best be practically implemented? What are the instructional tactics teachers need to take into consideration, in which groups are they collected, and which tips can help us employ each tactic? Additionally, readers can adapt the book's ready-to-use sample activities to their own educational settings. Overall, this book offers an enlightening discussion on contemporary practices related to the teaching process, a broad and holistic theoretical framework, and an ideal reference source for all students and scholars who are interested in the educational sciences.

*The book offers a balanced mix of practical and theoretical aspects of public policy by tracing its evolution in the Indian context and helping to strengthen conceptual articulation. Development of public policy as a subject of academic study and as a field of practice depends a lot on the prevalent socio-economic and political milieu. Public Policy: Concept, Theory and Practice highlights the critical aspects of public policy making and its implementation by contextualizing it in the Indian historical and modern-day perspective. Filling the existing content gap due to non-availability of comprehensive textbooks on the subject, this book makes the ideas and concepts easily intelligible for everybody. Students pursuing graduate and postgraduate courses in Political Science, Public Administration and civil services and UGC NET aspirants will find this book immensely useful. Key Features * Draws largely on instances from Indian experiences * Relates to and takes cue from contributions of well-established authors in the field * Raises questions to aid and inspire further research in this area * Dedicated sections on environmental policies and education and health policies discussed, devised and implemented in India.*

Tourism is one of the world's biggest industries. Responsible tourism is concerned with the effects of tourism on people, ecology, and communities, and seeks to ameliorate these impacts by providing tourism which benefits host communities, improves working conditions, involves the local community, promotes cultural heritage, and benefits the environment. This book discusses responsible tourism as a whole, including the politics, policy and planning behind it, and the major subject sub-topics, such as poverty reduction, the environment, transport, governance, wildlife tours and heritage. It is.

In the UK and elsewhere, restorative justice and policing are core components of a range of university programmes; however, currently no such text exists on the intersection of these two areas of study. This book draws together these diverse theoretical perspectives to provide an innovative, knowledge-rich text that is essential reading for all those engaged with the evolution and practice of restorative policing. Restorative Policing surveys the twenty-five year history of restorative policing practice, during which its use and influence over criminal justice has slowly grown. It then situates this experience within a criminological discussion about neo-liberal responses to crime control. There has been insufficient debate about how the concepts of 'restorative justice' and 'policing' sit alongside each other and how they may be connected or disconnected in theoretical and conceptual terms. The book seeks to fill this gap through an exploration of concepts, theory, policy and practice. In doing so, the authors make a case for a more transformative vision of restorative policing that can impact positively upon the shape and practice of policing and outline a framework for the implementation of such a strategy. This pathbreaking book will be of interest to undergraduate and postgraduate students taking courses on restorative justice, policing and crime control, as well as professionals interested in the implementation of restorative practices in the police force.

Open Access in Theory and Practice investigates the theory-practice relationship in the domain of open access publication and dissemination of research outputs. Drawing on detailed analysis of the literature and current practice in OA, as well as data collected in detailed interviews with practitioners, policymakers, and researchers, the book discusses what constitutes 'theory', and how the role of theory is perceived by both theorists and practitioners. Exploring the ways theory and practice have interacted in the development of OA, the authors discuss what this reveals about the nature of the OA phenomenon itself and the theory-practice relationship. Open Access in Theory and Practice contributes to a better understanding of OA and, as such, should be of great interest to academics, researchers, and students working in the fields of information science, publishing studies, science communication, higher education policy, business, and economics. The book also makes an important contribution to the debate of the relationship between theory and practice in information science, and more widely across different fields of the social sciences and humanities

Thoroughly revised, reorganized, updated, and expanded, this widely-used text sets the balance and fills the gap between theory and practice in public policy studies. In a clear, conversational style, the author conveys the best current thinking on the policy process with an emphasis on accessibility and synthesis rather than novelty or abstraction. A newly added chapter surveys the social, economic, and demographic trends that are transforming the policy environment.

Based on the most up-to-date research, Child Neuropsychology is a thorough and accessible guide to the key concepts and basic processes central to neuropsychological assessment and child evaluation. Essays by leading experts in the field cover basic neuropsychological functions and related disorders in the context of brain development. Divided into three parts, the text begins with clear definitions of the concepts and methodology of brain development in child neuropsychology. Part two examines normal and abnormal functional development. The final part considers professional practice and provides valuable insights into the special problems of neuropsychological assessment of infants and children in clinical and educational settings.

This book is an important account of the state of the art of both theoretical and practical issues in the present-day research on conceptual change. Unique in its complete treatment of the questions that should be considered to further current understanding of knowledge construction and change, this book is useful for psychologists, cognitive scientists, educational researchers, curriculum developers, teachers and educators at all levels and in all disciplines.
