The development of IS 15883: Part 2 (2009), Construction Time Management Guidelines is an important milestone in formally recognizing the threshold framework for the construction industry. This initiative of Bureau of Indian Standards (BIS) provides for a national framework for time management which specifically focuses on unique aspects of Indian construction industry. This handbook supplements the BIS framework enshrined in IS 15883: Part 2, and thereby facilitating capacity building for widespread application of the Guidelines. The chapters of handbook follow the stages of a typical project life cycle of a construction project, flowing seamlessly from project inception through to project closure. In addition, latest trends in the construction sector in terms of tools, techniques, and software have also been elaborated. It is implied that time management operates in conjunction with other interdependent processes of project management, and might need multi-dimensional decision making. To that extent this handbook does elaborate the relevant interface that maybe critical for comprehensive project management approach. As a primary expectation, the handbook would serve as a supplementary textbook for students of architecture, and civil engineering who are pursuing subjects in construction management. It is also an effortless reference for new entrants to the field of project management, and other management professionals as well who seek a quick reference to the tools and techniques of time management illustrated through examples in easy language.

Safety is broken. The people who are responsible for helping you stay safe should be at the top of your Christmas card list, but all too often they are despised, ridiculed and ignored. But safety management is beginning to be challenged. Businesses have begun to realise that what they have been doing is no longer providing any additional value. The same issues are repeatedly raised by corporate leadership: How do we get our workforce engaged in safety? How do we improve safety systems to gain commitment from all employees? How do we improve safety understanding to make the case for change? How do we embed safety as an integral part of culture in an environment of ongoing change and cost pressure? Challenging the Safety Quo makes the case for change based on stagnating performance, identifies areas where there are problems and proposes alternative ways to progress. Provocative but practical, it outlines the business benefits to be gained from putting in place the right approaches to managing safety, although not in the way traditionally presented by most safety managers. This book translates theory into practice; putting an accessible, practical and usable spin on cutting-edge thinking in safety.

These Standard Prequalification Documents serve as a guide for those wanting to prequalify to bid on large contracts for projects financed by the World Bank.

Qualifying as a bidder is separate from the bid evaluation process. Before invitations to bid on large or especially complex works projects are issued, a process of prequalification is required to select competent bidders. This document helps bidders through the prequalification process. To simplify presentation by applicants for prequalification, standard forms have been prepared for the submission of relevant information. Guidance notes and examples are provided for the implementing agency making the evaluation. Annexes give information about prequalification that are likely to be of interest to potential bidders on World Bank projects. NOTE: This replaces Standard Prequalification Document: Procurement of Works (September 1999), Stock no. 14601 (ISBN 0-8213-4601-6).
