Assessments, understood as tools for tracking what and how well students have learned, play a critical role in the classroom. Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K-12 Science Education (Framework) and Next Generation Science Standards (NGSS). These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

The only introductory economics text to equip students to address today's pressing problems by mastering the conceptual and quantitative tools of contemporary economics. OUP has partnered with the international collaborative project of CORE researchers and teachers to bring students a book andlearning system that complements and enhances CORE's open-access online e-book.The Economy is a new approach that integrates recent developments in economics including contract theory, strategic interaction, behavioral climate change, economic instability, wealth creation and innovation andother problems. It has been adopted as the standard principles course at University College London, Sciences Po Paris and the Toulouse School of Economics.A new economics for the principles course The Economy begins with social interactions using elementary game theory and institutions modelled as rules of the game. This provides the basis for a modern treatment of markets including price-making as well as price-taking, the exercise of power, labour and credit markets with incomplete contracts allows a consistent treatment of aggregate employment and fluctuations without the need for ad hoc sticky price and wage assumptions. Banks create money by extending credit and a central bank seeks to implement a target inflation rate. Growth and instability are illustrated from the Great Depression, through the post-war golden age of capitalism through to the financial crisis and ensuing uncertainties. Students acquire an understanding of the past and current evidence and articulate positions about contemporary policy issues.

The Videos Resources are on DVD and available for download within MyMathLab. They include a video lecture for each section of the textbook and a Chapter Test Prep Video for all Posttest exercises for each chapter. The video lectures cover important definitions, procedures and concepts from the section by working through examples, and exercises from the textbook, and offer optional captioning in English. The Chapter Test Prep Videos show an instructor working through the complete solutions for all Posttest exercises.

The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, or

the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and grading-and how it fits into the larger, comprehensive assessment system.

Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

Widely recognized as a market leader for its innovation, strong research base, and accessibility, the ninth edition of William L. Heward'sExceptional Children: An Introduction to Special Educationcontinues this tradition of excellence. A FOCUS ON EXCEPTIONAL TEACHERS • Featured Teacher essaysEach chapter begins with a first-person essay by master teachers that reflects the joys, challenges, and realities of teaching exceptional children. Drawn from urban, suburban, and rural school districts across the country, the 18 featured teachers share personal experiences and wisdom gathered from years of instructing children in a variety of school settings. • MyEducationLabAccess to MyEducationLab for this text allows readers to see, hear, and learn from the teachers featured in the text through video. Throughout the book, MyEducationLab icons connect key content and concepts practiced by master teachers to Homework & Exercises on MyEducationLab. • Tips for Beginning TeachersEach chapter culminates with practical, quick tips for beginning teachers--offered by the master teacher featured in each chapter--on how to avoid common pitfalls in the classroom. A FOCUS ON EFFECTIVE RESEARCH-BASED PRACTICES • Teaching & Learning featuresAll of the strategies described in the Teaching & Learning features are classroom-tested, supported by research, and provide clear and practical step-by-step guidelines for designing, implementing, and evaluating instruction for students with disabilities. • MyEducationLabEach of the research-based practices discussed in the Teaching & Learning features are connected to Homework & Exercises or Building Teaching Skills activities in MyEducationLab that extend and further develop these strategies through video, artifacts, or articles. A FOCUS ON ISSUES AND TRENDS • Current Issues and Future Trends featuresThese essays highlight the ever-changing nature of special education with the controversial issues, triumphs, struggles, and interventions involved in special education. For Future Preparation and Teacher Certification. • CEC Performance-Based StandardsThe Common Core standards are printed on the inside front cover of the text. Margin notes throughout the text link critical content to specific knowledge and skill statements from CEC's Performance-Based Standards for Beginning Teachers. • Coverage of PRAXIS IITM TestsA PRAXIS Study Grid in the Appendix shows where content areas of the PRAXIS II Test, Education of Exceptional Students: Core Principles, are discussed in the text.
