The purpose of this course is to provide students with a heightened appreciation of the role of a financial manager within a firm and to understand the tools and the nature of the decisions that financial managers must make. Paramount to the topic is an understanding of what constitutes a "good" manager. A traditional finance characterization of a good manager is one who adopts the most firm-value-maximizing projects in the interests of maximizing current shareholders' wealth (e.g. Brealey, Myers, and Allen, pp 20-28). This model is sometimes called the shareholder primacy model. An alternative model, frequently termed the stakeholder model, argues that a good manager is one who effectively maximizes the joint utility of all firm-stakeholders. A substantial literature has evolved highlighting the tensions between the two models. The goal of this course is to expose students to both of these models in the context of a traditional core-MBA finance class. The intent is for students to leave the course understanding in which situations the actions of stakeholder-focused managers and shareholder-focus managers will be the same and in which situations the actions could be different. In particular, students will appreciate that increased attention to the interests of all stakeholders is frequently essential to maximizing the long-term value of the firm and therefore current shareholder wealth.

This book draws readers' attention to the financial aspects of daily life at a corporation by combining a robust mathematical setting and the explanation and derivation of the most popular models of the firm. Intended for third-year undergraduate students of business finance, quantitative finance, and financial mathematics, as well as first-year postgraduate students, it is based on the twin pillars of theory and analytics, which merge in a way that makes it easy for students to understand the exact meaning of the concepts and their representation and applicability in real-world contexts. Examples are given throughout the chapters in order to clarify the most intricate aspects; where needed, there are appendices at the end of chapters, offering additional mathematical insights into specific topics. Due to the recent growth in knowledge demand in the private sector, practitioners can also profit from the book as a bridge-builder between university and industry. Lastly, the book provides useful information for managers who want to deepen their understanding of risk management and come to recognize what may have been lacking in their own systems.

Strategic corporate finance? This sounds like a paradox at first. After all, corporate finance means responding to the financial markets. Strategy, on the other hand, aims to change and shape the environment in the long term. Lately, though, more and more managers and investors appear to be breaking the laws of the capital market. At the same time, corporations are discovering new ways to not just react to the capital markets, but to actively shape them. The authors show that

these violations are not isolated occurrences, but part of a paradigm shift. If companies want to stay successful in changing markets, they have to take a strategic approach to corporate finance. The authors use practical examples to demonstrate how this can be achieved. This book is intended not only for corporate finance experts, but also for students interested in the latest developments on the financial markets.

Corporate Finance, by Ross, Westerfield, Jaffe, and Jordan emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application.
