A History of Corporate Financial Reporting provides an understanding of the procedures and practices which constitute corporate financial reporting in Britain, at different points of time, and how and why those practices changed and became what they are now. Its particular focus is the external financial reporting practices of joint stock companies. This is worth knowing about given the widely held view that Britain (i) pioneered modern financial reporting, and (ii) played a primary role in the development of both capital markets and professional accountancy. The book makes use of a principal and agent framework to study accounting's past, but one where the failure of managers always to supply the information that users' desire is given full recognition. It is shown that corporate financial reporting did not develop into its current state in a straightforward and orderly fashion. Each era produces different environmental conditions and imposes new demands on accounting. A proper understanding of accounting developments therefore requires a careful examination of the interrelationship between accountants and accounting techniques on the one hand and, on the other, the social and economic context within which changes took place. The book's corporate coverage starts with the legendary East India Company, created in 1600, and continues through the heyday of the statutory trading companies founded to build Britain's canals (commencing in the 1770s) and railways (commencing c.1829) to focus, principally, on the limited liability company fashioned by the Joint Stock Companies Act 1844 and the Limited Liability Act 1855. The story terminates in 2005 when listed companies were required to prepare their consolidated accounts in accordance with International Financial Reporting Standards, thus signalling the effective end of British accounting.

The adoption by the Accounting Standards Board of its Statement of Principles for Financial Reporting in December 1999 means that we now have an authoritative conceptual framework which should govern the production of British financial statements. Yet while the text of the Statement is directed at members of the accounting profession, students of accounting will need to understand the framework and its repercussions. An Introduction to Modern Financial Reporting Theory explains the content of the Statement in an accessible language, specifically for the student of accounting and finance. This text will be of direct and practical interest to students who need to understand the contents of the new framework, which helps to explain: why and how financial reporting is carried out; why financial statements are prepared in the way that they are; why accounting standards specify one method rather than another; how the methods specified by accounting standards relate to each other; how practice has developed and will continue to develop. Brian Rutherford emphasizes and enlarges on the key features of the framework, provides many more examples, shows how the framework applies in practice and also offers some criticisms of its content. The book clarifies to students why various methods and practices in accounting have evolved, while illustrating how they relate to each other and to the underlying function of financial reporting. This text will be essential reading on university and professional courses in advanced financial accounting, particularly courses on Accounting Theory and Financial Reporting. Brian Rutherford is Professor of Accounting at Canterbury Business School, University Kent at Canterbury.

For intermediate and financial accounting courses at the MBA and undergraduate level, or a supplement to financial statement analysis texts. This collection of financial accounting cases is designed to help students become financial statement users. Each case utilizes financial statement information (balance sheet, income statement, statement of cash flow and/or footnotes) and a number of topical questions. Students use the financial statement information to infer and interpret the economic events underlying the numbers. Related articles taken from business publications accompany some cases, and information from the articles is incorporated into the case question material. The Boundaries in Financial and Non-Financial Reporting

Globalization and the accompanying investment facilities available have resulted in rapid popularity for international financial reporting standards (IFRS). However, differences often exist in terms of what firms report, and once inconsistency between tax regulations and financial reporting regulations occur, differences between taxable and accounting practices are inevitable. This book introduces a new approach to corporate financial reporting by investigating goal incongruence (GING) in the context of the principal and agent (PA) setting. The authors argue that improving the method for the disclosure of information would not only increase the quality of corporate financial information and reporting but also reduce the possibility of any GING arising. This book presents the financial implications of international accounting and financial reporting standards (IAS and IFRS), presenting numerous real-life situations, cases, examples and implications to reveal how GING might influence the implementation of corporate financial reporting of profit volumes and sizes, which are the leading drivers of and widely accepted proxies for corporate financial performance.

Richard Baker during an academic career that spans four decades, picking up on various understudied threads of academic and professional initiatives over the past several hundred years.

If you read the 'business pages' of a newspaper or if you listen to the financial news on the television or radio, you will often hear terms such as 'liability', 'balance sheet' or 'earnings'. These terms turn up in non-financial contexts as well: 'he was more of a liability than an asset'.

If you invest in shares, have a building society account, or sit on a committee of the property company which owns your apartment block, you will receive financial statements every year. If you are a manager in a company, a hospital or a school, you will see accounting information often. This Very Short Introduction provides a guide to understanding and using accounting information. Christopher Nobes explains the main areas of accounting work, from bookkeeping and financial reporting to auditing and management accounting. Cases in Financial Reporting

Although the need to expand the boundaries of financial reporting has been discussed since the mid-1990s, little consideration has been given to the evolution and discourses of integrated reporting of non-financial aspects. Yet by investigating how and why an organisation defines and its reporting boundaries, it is possible to understand what is truly "valued" (or not) in its business model. This innovative book reviews the guidelines and frameworks from the major relevant international organisations including: the International Accounting Standards Board, Global Reporting Initiative, Sustainability Accounting Standards Board, International Integrated Reporting Council, Carbon Disclosure Standards Board, and the World Intellectual Capital Initiative, and analyses their development and impact on the boundaries of financial and non-financial reporting. Illustrated with case studies and interviews with representatives of these organisations, this concise volume makes a significant contribution to the future of reporting theory and practice. It will be of great interest to advanced students, researchers, practitioners and policy makers.

The Internet bubble has collapsed and the largest bankruptcy in US history, Enron, has made the call for greater transparency in financial reporting more important than ever. Andrew Higson draws attention to what is a 'true and fair view' in reporting and critically examines accounting theory and modern practice.

Accounting: A Very Short Introduction

Financial Reporting & Analysis

We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting, to reach today's financial reporting framework. However, is it possible to say that, currently, financial statements provide full and prompt disclosure? Or will they still be useful as a primary element with their current structures in corporate reporting? Undoubtedly, we are deeply concerned about these issues in recent times. This volume contains chapters to discuss the today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections: "Achieving Sustainability through Corporate Reporting", "International Standardization", "Financial Reporting Quality", "Accounting Profession and Behavioral Aspects", "Public Sector Accounting and Reporting", and "Managerial Accounting".

Corporate Financial Reporting Analysis combines comprehensive coverage and a rigorous approach to modern financial reporting with a readable and accessible style. Merging traditional principles of corporate finance and accepted reporting practices with current models enable the reader to develop essential interpretation and analysis skills, while the emphasis on real-world practicality and methodology provides seamless coverage of both GAAP and IFRS requirements for enhanced global relevance. Two decades of classroom testing among INSEAD MBA students has honed this text to provide the clearest, most comprehensive model for financial statement interpretation and analysis; a concise, logically organized pedagogical framework includes problems, discussion questions, and real-world case studies that illustrate applications and current practices, and in-depth examination of key topics clarifies complex concepts and builds professional intuition. With insightful coverage of revenue recognition, inventory accounting, receivables, long-term assets, M&A, income taxes, and other principle topics, this book provides both education and ongoing reference for MBA students.

Financial accounting, reporting and regulation is a vast subject area of huge global importance, with interest rising significantly in the light of the ongoing global financial crisis. The authors begin with a broad overview of the subject of accounting, setting the stage for a discussion on the theoretical and practical issues and debates regarding financial reporting, which are expanded on in the second part of the book. This includes how to define the reporting entity, recognition and measurement of the elements of financial statements, fair values in financial reporting and the costs and benefits of disclosure. The third part assesses the interest, need and theories behind the accounting, reporting and regulation industry, while parts four and five look at the institutional, social and economic aspects; with issues such as accounting for environmental management and, accounting regulation and financial reporting in Islamic countries, both issues of ever increasing importance. This authoritative Companion presents a broad overview of the state of these disciplines today, and will provide a comprehensive reference source for students and academics involved in accounting, regulation and reporting.

Presents complex materials in a clear and understandable manner. Incorporating the latest accounting standards and presenting the most up-to-date accounting theory from the top academic journals in accounting and finance throughout the world.

An Introduction to Modern Financial Reporting Theory

Financial Analysis of Mergers and Acquisitions

Corporate Financial Reporting and Analysis: A Global Perspective/3e by David Young and Jacob Cohen is an introductory textbook on financial reporting for MBA students. This book is intended to offer the rigor and comprehensive coverage required of an MBA text, while at the same time offering an accessible and practical reference for participants in executive programs. David Young is based at INSEAD Business School in France, and Jacob Cohen is based at MIT Sloan School of Management in the USA. This book offers a rigorous, yet accessible, treatment of contemporary financial reporting practice. Examples are drawn from a broad range of companies to illustrate key concepts. Particular emphasis is given to the latitude and flexibility granted to managers in reporting financial performance, and the steps that financial statement readers can take to identify potential trouble areas in the accounts. Topics include the analysis and interpretation of the three principal financial statements, revenue recognition, inventory accounting, receivables and bad debts, accounting for long-term assets, provisions and contingencies, income taxes, and the accounting for mergers and acquisitions. A unique feature of this book is the seamless way in which it deals with differences in U.S. GAAP and IFRS. Both regimes are covered simultaneously, i.e. when a topic is discussed, including the relevant journal entries and disclosures, the discussion applies equally to GAAP companies and to IFRS companies. It doesn't matter whether the company used in a given example is from the U.S., Europe, or elsewhere. Thanks to the ongoing GAAP/IFRS convergence project, the two regimes are close enough to allow for a somewhat generic approach that allows for coverage of both regimes at the same time. In this way, the examples that are covered in the book are relevant to all readers, regardless of which regime dominates in their business environment. The content of this book has been classroom tested over the past 20 years at INSEAD with the MBA class which has students from 80 different countries.

Ethics and Finance: An Introduction provides a comprehensive and accessible introduction to the ethical issues raised by modern finance. Drawing carefully on ethical theory and with frequent use of case studies, it includes an analysis of the global financial system and its regulation and control, as well as a detailed analysis of the financial crisis. Chapters on specific areas of finance practice cover all the major financial scandals of recent times, from mis-selling to market manipulation and from insider trading to bankers' bonuses, as well as much more positive developments. From micro finance to derivatives trading, the book provides a careful and balanced treatment designed to help finance students and practitioners approach this sensitive topic in a thoughtful and constructive way. No prior knowledge of ethics or finance is required, and the book will be invaluable to students, finance teachers, practitioners and regulators.

Since the global financial crisis of 2007–8, new laws and regulations have been introduced with the aim of improving the transparency in financial reporting. Despite the dramatically increased flow of information to shareholders and the public, this information flow has not always been meaningful or useful. Often it seems that it is not possible to see the wood for the trees. Financial scandals continue, as Wirecard, NMC Health, Patisserie Valerie, going back to Carillion (and many more) demonstrate.

Financial and corporate reporting have never been so fraught with difficulties as companies fail to give guidance about the future in an increasingly uncertain world aided and abetted by the COVID-19 pandemic. This concise book argues that the changes have simply masked an increase in the use of corporate PR, impression management, bullet points, glossy images, and other simulacra which allow poor performance to be masked by misleading information presented in glib boilerplate texts, images, and tables. The tone of the narrative sections in annual reports is often misleading. Drawing on extensive research and interviews with insiders and experts, this book charts what has gone wrong with financial reporting and offers a range of solutions to improve information to both investors and the public. This provides a framework for a new era of forward-looking corporate reporting and guidance based on often conflicting multiple corporate goals. The book also examines and contrasts the latest thinking by the regulatory authorities. Providing a compelling exploration of the industry's failings and present difficulties, and the impact of future disruption, this timely, thought-provoking book will be of great interest to students, researchers, and professionals as well as policy makers in accounting, financial reporting, corporate reporting, financial statement analysis, and governance.

The increasingly crucial role of companies non-financial disclosure (NFD) and integrated reporting (IR) has led to a lively debate among academics, practitioners, and regulators on the approaches, framework, contents, principles, and standards that should oversee these forms of reporting. Through several expert contributions, conducted both with qualitative and quantitative methodologies, this book provides an up-to-date portrait of the debate by exploring corporate NFD either in its mandated contents or voluntary information. Contributing authors provide studies that encompass the different lines of NFD, namely non-financial risk reporting, sustainability reporting, and intellectual capital reporting, as well as the integration of financial and non-financial information through IR, the assurance of the NFD and IR through auditing activities, and the role of management and CFOs in NFD and IR.

In the 18 chapters in this volume of Contemporary Studies in Economic and Financial Analysis, expert contributors gather together to examine the extent and characteristics of forensic accounting, a field which has been practiced for many years, but is still not internationally regulated yet.

Mergers and acquisitions (M&As) reshape the corporate landscape helping companies expand market share and gain a strategic advantage. The ability to understand and analyze these transactions is a crucial skill. The first step in acquiring that skill is being able to gather and analyse information on M&As from public sources, such as financial statements. This textbook helps its readers better analyze M&A transactions using information provided in financial statements. Covering accounting and reporting of consolidations, goodwill, non-controlling interests, step acquisitions, spin-offs, equity carve-outs, joint ventures, leveraged buyouts, disposal of subsidiaries, special purpose entities, and taxes, it focuses on the link between underlying economic events and the information in financial statements and how this link affects the assessment of corporate performance. The first part of the book provides description of the accounting rules governing M&A transactions, while the second part includes cases of M&A transactions. Each case focuses on a different element of an M&A transaction, and it is followed by a detailed solution with a complete analysis. Unlike other books in this field, this textbook focuses exclusively on accounting and financial analysis for graduate and upper undergraduate level courses in financial analysis, corporate finance, and financial accounting.

An innovative new valuation framework with truly useful economic indicators The End of Accounting and the Path Forward for Investors and Managers shows how the ubiquitous financial reports have become useless in capital market decisions and lays out an actionable alternative. Based on a comprehensive, large-sample empirical analysis, this book reports financial documents' continuous deterioration in relevance to investors' decisions. An enlightening discussion details the reasons why accounting is losing relevance in today's market, backed by numerous examples with real-world impact. Beyond simply identifying the problem, this report offers a solution—the Value Creation Report—and demonstrates its utility in key industries. New indicators focus on strategy and execution to identify and evaluate a company's true value-creating resources for a more up-to-date approach to critical investment decision-making. While entire industries have come to rely on financial reports for vital information, these documents are flawed and insufficient when it comes to the way investors and lenders work in the current economic climate. This book demonstrates an alternative, giving you a new framework for more informed decision making. Discover a new, comprehensive system of economic indicators Focus on strategic, value-creating resources in company valuation Learn how traditional financial documents are quickly losing their utility Find a path forward with actionable, up-to-date information Major corporate decisions, such as restructuring and M&A, are predicated on financial indicators of profitability and asset/liabilities values. These documents move mountains, so what happens if they're based on faulty indicators that fail to show the true value of the company? The End of Accounting and the Path Forward for Investors and Managers shows you the reality and offers a new blueprint for more accurate valuation.

The International Financial Reporting Standard (IFRS). Corporate Reporting Theory and Practice

Financial accounting theory has numerous practical applications and policy implications, for instance, international accounting standard setters are increasingly relying on theoretical accounting concepts in the creation of new standards: and corporate regulators various conceptual frameworks of accounting to guide regulation and the interpretation of accounting practices. The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally in particular. For instance, the fundamentals of capital market theory (i.e. market efficiency) and measurement theory (i.e. fair value) have received widespread public and regulatory attention. This comprehensive, authoritative volume provides a prestige reference for academics, regulators and practitioners a valuable resource containing the current scholarship and practice in the established field of financial accounting theory.

Seminar paper from the year 2008 in the subject Business economics - Accounting and Taxes, grade: 1,0, University of the West of England, Bristol (Bristol Business School), course: Corporate Reporting Theory and Practice, language: English, abstract: In this paper the Reporting Standard (IFRS) for Small and Medium-sized Entities (SMEs) is presented. It identifies that this new standard is required due to mainly smaller, non-listed companies prevailing. These entities currently use diverse national accounting standards and this is because of SMEs' differing activities and stakeholders, existing IFRSs would not be appropriate so new standards are needed. The IFRSs for SMEs are based on initial, full IFRSs but were reduced, simplified and adjusted to reduce the reporting burden that may be placed on them. All companies addressed are not publicly accountable, provide general purpose statements and approximately contain 50 employees. Which firms in detail will apply to these new standards is finalised by national jurisdictions. Nonetheless, there can be found some simplifications can result in insufficiently explained standards that can hardly be employed adequately. Furthermore, four accounting events are revealed: goodwill impairment, cost method for associates, finance leases and research and development expenditure compared to full IFRSs. The preparation of financial reports is facilitated and user interests are taken into consideration. However, alternatives can be suggested that perhaps are more appropriate for SMEs. Finally, it is concluded that the IFRS for SMEs are very advantageous adjustments that try to satisfy SMEs' as well as their reports users' needs. However, it becomes apparent that some revisions could be necessary to consequently truthfully allow the vast amount of smaller companies become globally comparable.
