**Writers know only too well how long it can take—and how awkward it can be—to describe spatial relationships with words alone. And while a map might not always be worth a thousand words, a good one can help writers communicate an argument or explanation clearly, succinctly, and effectively. In his acclaimed *How to Lie with Maps*, Mark Monmonier showed how maps can distort facts. In *Mapping it Out: Expository Cartography for the Humanities and Social Sciences*, he shows authors and scholars how they can use expository cartography—the visual, two-dimensional organization of information—to heighten the impact of their books and articles. This concise, practical book is an introduction to the fundamental principles of graphic logic and design, from the basics of**

***scale to the complex mapping of movement or change. Monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas, from literary criticism to sociology. He demonstrates, for example, various techniques for representing changes and patterns; different typefaces and how they can either clarify or confuse information; and the effectiveness of less traditional map forms, such as visibility base maps, frame-rectangle symbols, and complementary scatterplot designs for conveying complex spatial relationships. There is also a wealth of practical information on map compilation, cartobibliographies, copyright and permissions, facsimile reproduction, and the evaluation of source materials. Appendixes discuss the benefits and limitations of electronic graphics and pen-and-ink drafting, and how to work with a cartographic illustrator. Clearly written, and filled with real-world examples, Mapping it Out demystifies mapmaking for anyone writing in the humanities and social sciences. "A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called. It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way."—Christopher Lehmann-Haupt, The New York Times This volume contains the proceedings of CHARME 2001, the Eleventh Advanced Research Working Conference on Correct Hardware Design and***

**Verification Methods. CHARME 2001 is the 11th in a series of working conferences devoted to the development and use of leading-edge formal techniques and tools for the design and verification of hardware and hardware-like systems. Previous events in the 'CHARME' series were held in Bad Herrenalb (1999), Montreal (1997), Frankfurt (1995), Arles (1993), and Torino (1991). This series of meetings has been organized in cooperation with IFIP WG 10.5 and WG 10.2. Prior meetings, stretching back to the earliest days of formal hardware verification, were held under various names in Miami (1990), Leuven (1989), Glasgow (1988), Grenoble (1986), Edinburgh (1985), and Darmstadt (1984). The convention is now well-established whereby the European CHARME conference alternates with its biennial counterpart, the International Conference on Formal Methods in Computer-Aided Design (FMCAD), which is held on even-numbered years in the USA. The conference took place during 4-7 September 2001 at the Institute for System Level Integration in Livingston, Scotland. It was co-hosted by the Institute and the Department of Computing Science of Glasgow University and co-sponsored by the IFIP TC10/WG10.5 Working Group on Design and Engineering of Electronic Systems. CHARME 2001 also included a scientific session and social program held jointly with the 14th International Conference on Theorem Proving in Higher Order Logics (TPHOLs), which was co-located in nearby Edinburgh.**

***Lorenzo Dow Turner***

The first biography of the acclaimed African American linguist and author of *Africanisms in the Gullah Dialect* In this first book-length biography of the pioneering African American linguist and celebrated father of Gullah studies, Margaret Wade-Lewis examines the life of Lorenzo Dow Turner. A scholar whose work dramatically influenced the world of academia but whose personal story—until now—has remained an enigma, Turner (1890-1972) emerges from behind the shadow of his germinal 1949 study *Africanisms in the Gullah Dialect* as a man devoted to family, social responsibility, and intellectual contribution. Beginning with Turner's upbringing in North Carolina and Washington, D.C., Wade-Lewis describes the high expectations set by his family and his distinguished career as a professor of English, linguistics, and African studies. The story of Turner's studies in the Gullah islands, his research in Brazil, his fieldwork in Nigeria, and his teaching and research on Sierra Leone Krio for the

**Peace Corps add to his stature as a cultural pioneer and icon. Drawing on Turner's archived private and published papers and on extensive interviews with his widow and others, Wade-Lewis examines the scholar's struggle to secure funding for his research, his relations with Hans Kurath and the Linguistic Atlas Project, his capacity for establishing relationships with Gullah speakers, and his success in making Sea Island Creole a legitimate province of analysis. Here Wade-Lewis answers the question of how a soft-spoken professor could so profoundly influence the development of linguistics in the United States and the work of scholars—especially in Gullah and creole studies—who would follow him. Turner's widow, Lois Turner Williams, provides an introductory note and linguist Irma Aloyce Cunningham provides the foreword.**

**This book constitutes revised selected papers from the 14th International Workshop on Digital-Forensics and Watermarking, IWDW 2015, held in Tokyo, Japan, in October 2015. The 35 papers presented in this volume were carefully reviewed and selected from 54 submissions. The contributions are organized in topical sections named: digital forensics; steganography and steganalysis; digital watermarking; reversible data hiding; and visual cryptography.**

This book offers a dual approach to the teaching of writing. It acknowledges the importance of the formal study of grammar but also supports recent research which suggests that in order to become writers, students must write. For this reason, Writing Well reinforces grammatical concepts with practice sections to clarify language basics but also includes extensive writing assignments. This volume particularly emphasizes proofreading skills. Students become their own editors by reading and revising their writing and the writing of their peers. The objectives

for each lesson are reviewed in the Edit portion of each page. Answer key and progress chart are included.

Volumes CCIS 107 and LNCS 6382 constitute the proceedings of the 5th International Symposium, ISICA 2010, held in Wuhan, China, in October 2010. ISICA 2010 attracted 267 submissions and through rigorous reviews 53 papers were included in LNCS 6382. The papers are presented in sections on ANT colony and particle swarm optimization, differential evolution, distributed computing, genetic algorithms, multi-agent systems, multi-objective and dynamic optimization, robot intelligence, statistic learning and system design.

Addresses common writing problems, including dangling modifiers, bad diction, sentence fragments, comma errors, and more Strengthens student writing with clear, easy-to-follow practice exercises Includes guidance on writing strategies and the writing process See Solving Common Writing Problems Set

**This volume of The Frederick Douglass Papers represents the first of a four-volume series of the selected correspondence of the great American abolitionist and reformer. Douglass's correspondence was richly varied, from relatively obscure slaveholders and fugitive slaves to poets and politicians, including Horace Greeley, William H. Seward, Susan B. Anthony, and Henry Wadsworth Longfellow. The letters acquaint us with Douglass's many roles—politician, abolitionist, diplomat, runaway slave, women's rights advocate, and family man—and include many previously unpublished letters between Douglass and members of his family. Douglass stood at the epicenter of the political, social, intellectual, and cultural issues of antebellum America. This collection of Douglass's early correspondence**

**illuminates not only his growth as an activist and writer, but the larger world of the times and the abolition movement as well.**

**Theoretical and practical tools to master matrix code design strategy and technique**  
**Error correcting and detecting codes are essential to improving system reliability**  
**and have popularly been applied to computer systems and communication systems.**  
**Coding theory has been studied mainly using the code generator polynomials; hence,**  
**the codes are sometimes called polynomial codes. On the other hand, the**  
**codes designed by parity check matrices are referred to in this book as matrix codes.**  
**This timely book focuses on the design theory for matrix codes and their practical**  
**applications for the improvement of system reliability. As the author effectively**  
**demonstrates, matrix codes are far more flexible than polynomial codes, as they are**  
**capable of expressing various types of code functions. In contrast to other coding**  
**theory publications, this one does not burden its readers with unnecessary**  
**polynomial algebra, but rather focuses on the essentials needed to understand and**  
**take full advantage of matrix code constructions and designs. Readers are presented**  
**with a full array of theoretical and practical tools to master the fine points of matrix**  
**code design strategy and technique: \* Code designs are presented in relation to**  
**practical applications, such as high-speed semiconductor memories, mass memories**  
**of disks and tapes, logic circuits and systems, data entry systems, and distributed**

**storage systems \* New classes of matrix codes, such as error locating codes, spottybyte error control codes, and unequal error control codes, are introduced along with their applications \* A new parallel decoding algorithm of the burst error control codes is demonstrated In addition to the treatment of matrix codes, the author provides readers with a general overview of the latest developments and advances in the field of code design. Examples, figures, and exercises are fully provided in each chapter to illustrate concepts and engage the reader in designing actual code and solving real problems. The matrix codes presented with practical parameter settings will be very useful for practicing engineers and researchers. References lead to additional material so readers can explore advanced topics in depth. Engineers, researchers, and designers involved in dependable system design and code design research will find the unique focus and perspective of this practical guide and reference helpful in finding solutions to many key industry problems. It also can serve as a coursebook for graduate and advanced undergraduate students.**

This book presents refereed and revised papers presented at GREC 2001, the 4th IAPR International Workshop on Graphics Recognition, which took place in Kingston, Ontario, Canada in September 2001. Graphics recognition is a branch of document image analysis that focuses on the recognition of two-dimensional notations such as engineering drawings, maps, mathematical notation, music notation, tables, and chemical structure diagrams. Due to the growing demand for both off-line and on-line document recognition systems, the field of graphics recognition has an exciting and promising future. The GREC workshops provide an opportunity for researchers at all levels of experience to share insights into graphics recognition methods. The workshops enjoy strong participation from researchers in both industry and academia. They are sponsored by IAPR TC-10, the Technical Committee on Graphics Recognition within the International Association for Pattern Recognition. Edited volumes from the previous three workshops in this series are available as Lecture Notes in Computer Science, Vols. 1072, 1389, and 1941. After the GREC 2001 workshop, authors were invited to submit enhanced versions of their papers for review. Every paper was evaluated by three reviewers. We are grateful to both authors and reviewers for their careful work during this review process. Many of the papers that appear in this volume were thoroughly revised and improved, in response to reviewers' suggestions.

*This book presents the latest research findings, methods and development techniques, challenges and solutions concerning UPC from both theoretical and practical perspectives, with an emphasis on innovative, mobile and Internet services.*

*With the proliferation of wireless technologies and electronic devices, there is a rapidly growing interest in Ubiquitous and Pervasive Computing (UPC), which makes it possible to create a human-oriented computing environment in which computer chips are embedded in everyday objects and interact with the physical world. Through UPC, people can go online even while moving around, thus enjoying nearly permanent access to their preferred services. Though it has the potential to revolutionize our lives, UPC also poses a*

*number of new research challenges.*

*The field of sketch-based interfaces and modeling (SBIM) is concerned with developing methods and techniques to enable users to interact with a computer through sketching - a simple, yet highly expressive medium. SBIM blends concepts from computer graphics, human-computer interaction, artificial intelligence, and machine learning. Recent improvements in hardware, coupled with new machine learning techniques for more accurate recognition, and more robust depth inferencing techniques for sketch-based modeling, have resulted in an explosion of both sketch-based interfaces and pen-based computing devices. Presenting the first coherent, unified overview of SBIM, this unique text/reference bridges the two complementary research areas of user interaction (sketch-based interfaces), and graphical modeling and construction (sketch-based modeling). The book discusses the state of the art of this rapidly evolving field, with contributions from an international selection of experts. Also covered are sketch-based systems that allow the user to*

*manipulate and edit existing data - from text, images, 3D shapes, and video - as opposed to modeling from scratch. Topics and features: reviews pen/stylus interfaces to graphical applications that avoid reliance on user interface modes; describes systems for diagrammatic sketch recognition, mathematical sketching, and sketch-based retrieval of vector drawings; examines pen-based user interfaces for engineering and educational applications; presents a set of techniques for sketch recognition that rely strictly on spatial information; introduces the Teddy system; a pioneering sketching interface for designing free-form 3D models; investigates a range of advanced sketch-based systems for modeling and designing 3D objects, including complex contours, clothing, and hair-styles; explores methods for modeling from just a single sketch or using only a few strokes. This text is an essential resource for researchers, practitioners and graduate students involved in human-factors and user interfaces, interactive computer graphics, and intelligent user interfaces and AI.*

*Teaches students to learn and use basic proofreading techniques.*

**CRYPTOGRAPHY, INFORMATION THEORY, AND ERROR-CORRECTION** A rich examination of the technologies supporting secure digital information transfers from respected leaders in the field As technology continues to evolve Cryptography, Information Theory, and Error-Correction: A Handbook for the 21ST Century is an indispensable resource for anyone interested in the secure exchange of financial information. Identity theft, cybercrime, and other security issues have taken center stage as information becomes easier to access. Three disciplines offer solutions to

these digital challenges: cryptography, information theory, and error-correction, all of which are addressed in this book. This book is geared toward a broad audience. It is an excellent reference for both graduate and undergraduate students of mathematics, computer science, cybersecurity, and engineering. It is also an authoritative overview for professionals working at financial institutions, law firms, and governments who need up-to-date information to make critical decisions. The book's discussions will be of interest to those involved in blockchains as well as those working in companies developing and applying security for new products, like self-driving cars. With its reader-friendly style and interdisciplinary emphasis this book serves as both an ideal teaching text and a tool for self-learning for IT professionals, statisticians, mathematicians, computer scientists, electrical engineers, and entrepreneurs. Six new chapters cover current topics like Internet of Things security, new identities in information theory, blockchains, cryptocurrency, compression, cloud computing and storage. Increased security and applicable research in elliptic curve cryptography are also featured. The book also: Shares vital, new

research in the field of information theory Provides quantum cryptography updates Includes over 350 worked examples and problems for greater understanding of ideas. Cryptography, Information Theory, and Error-Correction guides readers in their understanding of reliable tools that can be used to store or transmit digital information safely.

This book presents a guide for research methodology and scientific writing covering various elements such as finding research problems, writing research proposals, obtaining funds for research, selecting research designs, searching the literature and review, collection of data and analysis, preparation of thesis, writing research papers for journals, citation and listing of references, preparation of visual materials, oral and poster presentation in conferences, and ethical issues in research . Besides introducing library and its various features in a lucid style, the latest on the use of information technology in retrieving and managing information through various means are also discussed in this book. The book is useful for students, young researchers, and professionals. As computers increasingly control the systems and services we

depend upon within our daily lives like transport, communications, and the media, ensuring these systems function correctly is of utmost importance. This book consists of twelve chapters and one historical account that were presented at a workshop in London in 2015, marking the 25th anniversary of the European ESPRIT Basic Research project 'ProCoS' (Provably Correct Systems). The ProCoS I and II projects pioneered and accelerated the automation of verification techniques, resulting in a wide range of applications within many trades and sectors such as aerospace, electronics, communications, and retail. The following topics are covered: An historical account of the ProCoS project Hybrid Systems Correctness of Concurrent Algorithms Interfaces and Linking Automatic Verification Runtime Assertions Checking Formal and Semi-Formal Methods Provably Correct Systems provides researchers, designers and engineers with a complete overview of the ProCoS initiative, past and present, and explores current developments and perspectives within the field.
