The Poems Shakespeare’s greatest achievement in nondramatic verse was his collection of 154 magnificent sonnets that portray a tumultuous world of love, rivalry, and conflict among a poet, an aristocratic young man, a rival poet, and a mysterious “dark lady.” More profound than other Elizabethan sonnet sequences and never surpassed as archetypes of the form, these poems explore almost every imaginable emotional complexity related to love and friendship. Some poems are dark, bitter, and self-hating, others express idealism with unmatched eloquence-and all are of quintessential beauty, part of the world’s great literary heritage. In addition to his sonnets, Shakespeare published two long poems early in his career: Venus and Adonis and The Rape of Lucrece. Immediately popular in Shakespeare’s time, they display a richness that can also reward us with insights into the powerful imagery of his plays. Rounding out this volume are two minor poems, “A Lover’s Complaint” and “The Phoenix and Turtle,” thought to be part of Shakespeare’s early writings. Each number is the catalogue of a specific school or college of the University.

The bestselling classic that redefined our view of the relationship between beauty and female identity. In today’s world, women have more power, legal recognition, and professional success than ever before. Alongside the evident progress of the women’s movement, however, writer and journalist Naomi Wolf is troubled by a different kind of social control, which, she argues, may prove just as restrictive as the traditional image of homemaker and wife. It’s the beauty myth, an obsession with physical perfection that traps the modern woman in an endless spiral of hope, self-consciousness, and self-hatred as she tries to fulfill society’s impossible definition of “the flawless beauty.”

"Part social commentary, part cultural analysis, part careful investigation and part powerful personal anecdotes, a provocative book explores the relationship between appearance and science, social media, sex, friendship, language and advertising to show how beauty actually affects us day to day."--NoveList.

The problem explored in The Soul of Beauty is the split in modern consciousness between the world of perception and appearance on the one hand, and the world of action and meaning on the other. We see in one way and find truth in another. The work presents this dualism as a problem in the modern sense of beauty. The intent of the book is the recovery of beauty as that which brings together such contemporary splits as perception and action, appearance and meaning, matter and spirit, subject and object. Beauty is imaged in two paradigms. The first presents beauty as a matter of appearance which holds meaning - beauty as truth. The second holds that beauty is subjective experience, which in its modern sense is divorced from knowledge and practical action - beauty as relative experience. The paradigms are formed through an imaginative and historical exploration of the tradition of beauty in Western consciousness. The prototype of the first paradigm - beauty as appearance - is seen in the goddess Aphrodite, who reflects the Greek sense of divinity in form itself. This paradigm is then founded upon the tradition of Plato in the Phaedrus and the Symposium, Plotinus, Dionysius, and Ficino. The major elements of this paradigm are depicted in beauty as: (1) source in a hierarchical universe, (2) universal mediator, (3) object of love, (4) human perception, (5) human knowledge, (6) light, and (7) unity, goodness, and being. The suggestion is made that the paradigm of beauty as appearance is relevant for psychology as a study of soul because it brings together perception and meaning. The paradigm of beauty as a subjective experience focuses historically upon beauty as a spiritual, conceptual (proportion), methodological (linear perspective), and subjective phenomenon. In the tradition of proportion and subjectivism, knowledge is gained through perception that occurs via an organizing system, such as mathematics, or a concept, such as proportion, rather than through the direct perception of appearance. Meaning is separated from perception, and the organizing system or concept, not appearance, becomes the ground of knowledge. It is suggested that this paradigm, reflected in scientific and conceptual psychology, is problematic for psychology as a study of soul. Instead, psychology conducts its endeavors in the service of identification with the divine, control over the physical world, and certainty of consciousness. The final portion of the work examines the recovery of beauty as appearance in contemporary psychology through the notion of "image" in Jung's later thought and the phenomenon of psychotherapy. The work concludes with a presentation of psychology as an aesthetic enterprise bringing together meaning and appearance, spirit and matter, art and science, subject and object.

“Much will be made—and rightly so—of the eloquent commentary [Lam’s] essays provide on Vietnam and the Vietnamese . . . a fascinating and important book.” —Robert Olen Butler, Pulitzer Prize-winning author A PEN American Beyond Margins Award winner In his long-overdue first collection of essays, noted journalist and NPR commentator Andrew Lam explores his lifelong struggle for identity as a Viet Kieu, or a Vietnamese national living abroad. At age eleven, Lam, the son of a South Vietnamese general, came to California on the eve of the fall of Saigon to communist forces. He traded his Vietnamese name for a more American one and immersed himself in the allure of the American dream: something not clearly defined for him or his family. Reflecting on the meanings of the Vietnam War to the Vietnamese people themselves—particularly to those in exile—Lam picks with searing honesty at the roots of his doubleness and his parents’ longing for a homeland that no longer exists. “Lam shatters the assumptions of readers who have encountered the Vietnam experience only through American pop culture . . . He writes with the delicacy and intensity of a poet.” —Los Angeles Times Book Review “Andrew Lam writes with the honesty of a true journalist and the feeling of a born storyteller. On his many journeys between Vietnam and the U.S., he sees first-hand the global consequences of war. Perfume Dreams is a meaningful book for our times.” —Maxine Hong Kingston, national bestselling author of The Woman Warrior “Lam’s insights into Asian American life are reflected in candid, witty anecdotes that reveal much about the difficulties of living in two cultures.” —Audrey Magazine

Beauty - Cosmetic Science, Cultural Issues, and Creative Developments allows the reader to contemplate the many aspects of beauty. Within the book, there is a weaving together of external and internal beauty. Certainly, both influence each other. Some chapters focus on products that are used to care for oneself or work to enhance beauty. Other chapters look at media both commercial and social and the effects of those messages on one’s acceptance of beauty. There are chapters that take us into the wilderness to explore our souls and teach us how we can spark our own creativity. This volume soars to encompass the limitless nature of beauty and plunges deep into internal connections to help us understand how we experience our own beauty.

A FINALIST FOR THE PULITZER PRIZE NAMED A BEST BOOK OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW, SMITHSONIAN, AND WALL STREET JOURNAL A major reimagining of how evolutionary forces work, revealing how mating preferences—what Darwin termed “the taste for the beautiful”—create the extraordinary range of ornament in the animal world. In the great halls of science, dogma holds that Darwin’s theory of natural selection explains every branch on the tree of life: which species thrive, which wither away to extinction, and what features each evolves. But can adaptation by natural selection really account for everything we see in nature? Yale University ornithologist Richard Prum—reviving Darwin’s own views—thinks not. Deep in tropical jungles around the world are birds with a dizzying array of appearances and mating displays: Club-winged Manakins who sing with their wings, Great Argus Pheasants who dazzle prospective mates with a four-foot-wide cone of feathers covered in golden 3D spheres, Red-capped Manakins who moonwalk. In thirty years of fieldwork, Prum has seen numerous display traits that seem disconnected from, if not outright contrary to, selection for individual survival. To explain this, he dusts off Darwin’s long-neglected theory of sexual selection in which the act of choosing a mate for purely aesthetic reasons—for the mere pleasure of it—is an independent engine of evolutionary change. Mate choice can drive ornamental traits from the constraints of adaptive evolution, allowing them to grow ever more elaborate. It also sets the stakes for sexual conflict, in which the sexual autonomy of the female evolves in response to male sexual control. Most crucially, this framework provides important insights into the evolution of human sexuality, particularly the ways in which female preferences have changed male bodies, and even maleness itself, through evolutionary time. The Evolution of Beauty presents a unique scientific vision for how nature’s splendor contributes to a more complete understanding of evolution and of ourselves.

The source of tremendous power and the focus of incredible devotion, throughout history notions of beauty have been integral to social life and culture. Each age has had its own standards: a gleaming white brow during the Renaissance, the black eyebrows considered charming in the early eighteenth century, and the thin lips thought desirable by Victorians. Beauty has ensured good marriages, enabled social mobility and offered fame and notoriety, and has led women - and some men - to remarkable lengths in cultivating it, from the dangerous quantities of lead applied by Elizabeth I, to the women of the 1940s and '50s, who employed face powder, lipstick and mascara to look their best during the privations of war and austerity, creating a chic appearance to which many still aspire.

This book, first published in 1983, provided the first thorough and informative introduction to the theory, practice and politics of rural settlement planning. It surveys the conceptual and ideological leanings of those who have developed, implemented and revised rural settlement practice, and gives detailed analysis of planning documentation to assess the extent to which policies have been successfully implemented. Paul Cloke assesses the shortfalls of rural planning and resource management and suggests methods by which a sustainable rural future might be attained. This reissue provides essential background and a comprehensive handbook for those with an interest in rural settlement planning.

Perception of Beauty

One of Book Riot's "The Best Books We Read in October 2018" "To say this collection is transgressive, provocative, and brilliant is simply to tell you the truth." —Roxane Gay, author of *Hunger* and *Bad Feminist* Smart, humorous, and strikingly original essays by one of "America's most bracing thinkers on race, gender, and capitalism of our time" (Rebecca Traister) In these eight piercing explorations on beauty, media, money, and more, Tressie McMillan Cottom—award-winning professor and acclaimed author of *Lower Ed*—embraces her venerated role as a purveyor of wit, wisdom, and Black Twitter snark about all that is right and much that is wrong with this thing we call society. Ideas and identity fuse effortlessly in this vibrant collection that on bookshelves is just as at home alongside Rebecca Solnit and bell hooks as it is beside Jeff Chang and Janet Mock. It also fills an important void on those very shelves: a modern black American feminist voice waxing poetic on self and society, serving up a healthy portion of clever prose and southern aphorisms as she covers everything from *Saturday Night Live*, *Linkedn*, and *BBQ Becky* to sexual violence, infant mortality, and Trump rallies. Thick speaks fearlessly to a range of topics and is far more genre-bending than a typical compendium of personal essays. An intrepid intellectual force hailed by the likes of Trevor Noah, Chimamanda Ngozi Adichie, and Oprah, Tressie McMillan Cottom is "among America's most bracing thinkers on race, gender, and capitalism of our time" (Rebecca Traister). This stunning debut collection—in all its intersectional glory—mines for meaning in places many of us miss, and reveals precisely how the political, the social, and the personal are almost always one and the same.

The authors in this book ask us to consider whether the perception of beauty has been defined by our genetics and culture over the years - has it grown and changed? Do certain neural connections define our emotional reactions to beauty? Does beauty follow any rules or laws? Can the aspiration toward beauty be detrimental? Can we divorce ourselves from dictates and sink into a mindful connection with our internal beauty? Can we move from the superficial where "beauty is only skin deep" to an intense appreciation of beauty in all of its variations. *The Perception of Beauty* will lead to a deeper understanding and contemplation of nature, art, and the world around us.

The second installment of Scott Westerfeld's international bestselling *Uglies* series – the global phenomenon that started the dystopian trend. In Tally's world, looks are all that matters. And now that she's finally undertaken the surgery to become a 'Pretty', everything seems perfect: her looks are flawless, her clothes are cool, her boyfriend is totally gorgeous, and she's completely popular. But beneath the fun of non-stop parties, high-tech luxury and apparent total freedom, Tally can't stop a nagging sense that something is wrong. Something important. Then a message from her 'Ugly' past arrives, forcing Tally to remember the truth she learned before her transformation, and the fun stops cold. Because the true price of this perfect world is more than Tally is willing to pay...

Cosmic evolution leads from symmetry to complexity by symmetry breaking and phase transitions. The emergence of new order and structure in nature and society is explained by physical, chemical, biological, social and economic self-organization, according to the laws of nonlinear dynamics. All these dynamical systems are considered computational systems processing information and entropy. Are symmetry and complexity only useful models of science or are they universals of reality? Symmetry and Complexity discusses the fascinating insights gained from natural, social and computer sciences, philosophy and the arts. With many diagrams and pictures, this book illustrates the spirit and beauty of nonlinear science. In the complex world of globalization, it strongly argues for unity in diversity.
