Inhaltsangabe:Abstract: Traditional management accounting systems are limited in their ability to provide profitability information relevant to management decisions. The problems of inadequate profitability measurement are intensified by the increasing competition in today's international market and the customer sophistication in locating low-cost providers. In response a number of manufacturers and service companies are experimenting with new methods to analyse their profits. The

collection and analysis of information on the customer profitability analysis enables management to identify their most attractive customer groups and support them with their scarce resources, turning loss-making making accounts into profitable ones. The project investigate both the theoretical approach of customer profitability analysis and its usage in practice, today. Relevant data was collected by means of a survey and three case studies. The survey provided information about the extent of knowledge of member of organisations about customer profitability analysis and the use of it in the decision making process. The interviews added deeper knowledge about the application of customer profitability analysis in practice and helped to find new insights to this analysis method.

This book integrates the models employed in the fundamental analysis of a company with the models used by investors in the capital markets to diversify risks and maximize expected returns. The underlying thesis is that the company creates value only if the return on capital invested exceeds the cost of capital, while the objective is to demonstrate how integration of the fields of corporate finance and asset pricing enables comprehensive and accurate company valuation. Companies can thrive only if they are able to create value for shareholders over time. A company's value creation and the correct approach to its measurement require two main skills: first, the ability to analyze and evaluate the company's fundamentals with respect to its business model and its performance over time; and second, knowledge of investors' models with regard to risk diversification and return maximization from which the cost of capital for the firm is derived. Based on this perspective, the book combines rigorous quantitative analysis with effective use of graphics to aid intuitive understanding.

Rate of returns in education is based on the technique of cost-benefit analysis, which compares the benefit accruing from education with the cost. In this paper, the private rate of return is estimated for management education using the short-cut method of the cost-benefit analysis. Based on data generated in Guwahati, returns to management education is estimated at 17.64 percent. Besides returns accruing to females management graduates are found to be higher than that of males. Similarly MBAs in Finance enjoy greater returns than those employed in other functional areas.

The Asian Development Bank (ADB) has been continuously undertaking measures to enhance the effectiveness of its operations. To improve projects both at the preparation and implementation stages, ADB issued the Guidelines for Economic Analysis of Projects in 1997 as a means to enhancing project quality at entry. The conduct of proper economic analysis helps ensure the efficient use of development funds and public resources and thereby increase aid effectiveness. This practical guide is a supplement to the Guidelines for the Economic Analysis of Projects. It provides an overview of recent methodological developments in cost-benefit analysis as well as suggested improvements in the economic analysis of projects in selected sectors through case studies. The case studies illustrate the application of suggested methodology taking into account sector-specific needs, as well as difficulties faced by practitioners in terms of data and time constraints during project processing. It also aims to contribute to ADB's capacity building initiatives as this will be the main reference material for the conduct of economic analysis.
