This book offers 32 texts and case studies from across a wide range of business sectors around a managerial framework for Sustainable Business. The case studies are developed for and tested in executive education programmes at leading business schools. The book is based on the premise that the key for managing the sustainable business is finding the right balance over time between managing competitiveness and profitability AND managing the context of the business with its political, social and ecological risks and opportunities. In that way, a sustainable business is highly responsive to the demands and challenges from both markets and societies and managers embrace the complexity, ambivalence and uncertainty that goes along with this approach. The book presents a framework that facilitates the adoption of best business practice. This framework leads executives through a systematic approach of strategic analysis and business planning in risk management, issues management, stakeholder management, sustainable business development and strategic differentiation, business model innovation and developing dynamic capabilities. The approach helps broaden the understanding of what sustainable performance means, by protecting business value against sustainability risks and creating business value from sustainability opportunities.

First published in 1991, this work critically analyses the competing claims about alternative arrangements for schooling. It does so in light of major popularly understood agendas for social and political purpose, and of the troubled and much less clearly understood assumptions and issues behind them. The book examines closely four generic types of arrangements for schooling in light of a comprehensive framework for understanding the publicness or privateness of schools, and the relationships between social and educational purpose. The book poses key questions about the meaning and purpose of schooling in the rapidly evolving social, demographic and technological realities of the time. It also probes fundamental assumptions, values and beliefs behind educational and public policy-making. In doing so, it offers a way to make sense of unorthodox arrangements for the provision and funding of schools.

"HELP! My Students Can't Write!" Why You Need a Writing Revolution in Your Classroom and How to Lead It. The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, TWR can make a dramatic difference. And the method does more than improve writing skills. It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities TWR is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content. Early in this century, most empirically oriented psychologists believed that all motivation was based in the physiology of a set of non-nervous system tissue needs. The theories of Maslow reflected this belief and used it in an attempt to explain an increasing number of phenomena. It was not until the 1950s that it became irrefutably clear that much of human motivation was not in these drives, but rather in a set of innate psychological needs. Their physiological basis is less understood; and as concepts, these needs lend themselves more easily to psychological theorizing than to physiological theorizing. The convergence of evidence from a variety of scholars suggests that there are three such needs: self-determination, competence, and interpersonal relatedness. This book is primarily about self-determination and competence (with particular emphasis on the former), and about the processes and structures that relate to these needs. The need for interpersonal relatedness, while no less important, remains to be explored, and findings from those explorations will need to be integrated with the present theory to form a broad, organismic theory of human motivation. Thus far, we have articulated self-determination theory, which is offered as a working theory—a theory in the making. To stimulate the theory that will allow it to evolve further, we have stated self-determination theory in the form of several minitheories that relate to more circumscribed domains, and we have developed paradigmatic testing predictions from the various minitheories.

This volume details the development and initial evaluation of a supplemental literacy course intended to support at-risk high school students in the US. Developed using design-based research (DBR), the course combines argument writing and knowledge building literacy routines to support academic literacy development. Acknowledging the demand for US students to meet academic literacy standards that emphasize explanatory and argumentative writing, this text foregrounds knowledge building as key to effective writing development. Chapters describe the development and implementation of course literacy routines designed using DBR and use classroom and individual case studies to demonstrate how informational reading, discussion, and argument writing become an activity system to support literacy development. Ultimate implications has important implications for literacy course design, and the use of knowledge building and analysis and DBR in research. The text will benefit researchers, academics, and educators in secondary and higher education with an interest in academic literacy education, writing and composition in secondary education more broadly. Those specifically interested in methodologies related to classroom teaching and learning as well as argumentation and argument writing will also benefit from this book.

Anderson on the Uniform Commercial Code

As the income gap between developed and developing nations grows, so grows the cacophony of voices claiming that the quest to find a simple recipe for economic growth has failed. Getting Better, in sharp contrast, reports the good news about global progress. Economist Charles Kenny argues against development naysayers by pointing to the evidence of widespread improvements in health, education, peace, liberty--and even happiness. Kenny shows how the spread of cheap technologies, such as vaccines and bed nets, and ideas, such as political rights, has transformed the world. He also shows that by understanding this

transformation, we can make the world an even better place to live. That's not to say that life is grand for everyone, or that we don't have a long way to go. But improvements have spread far, and, according to Kenny, they can spread even further.
