Lecture Notes: Tropical Medicine is a comprehensive introduction to tropical medicine. The new edition is in full colour throughout with over 40 colour images integrated with the text. There is a new chapter on syndromes of undernutrition (in both children and adults), and the section on non-communicable diseases has been extended to include mental health problems in the tropics. The core information is presented in a clear and concise way, with extensive use of diagrams, algorithms, tables and boxes. All chapters have been updated to reflect current best practice and the annotated bibliographies and lists of web-based resources have been extended. The chapters on HIV, tuberculosis and malaria have undergone particularly extensive revision, reflecting rapid changes in these areas since the last edition. Lecture Notes: Tropical Medicine is particularly aimed at postgraduate doctors attending tropical medicine courses, as well as medical students taking a tropical medicine elective

period. It will also be useful to a wide range of other health professionals involved with medicine in the tropics, or imported tropical disease.

A Transdiagnostic Approach to Develop Organization, Attention and Learning Skills introduces the GOALS program – an innovative and skill-based approach that addresses the unique array of academic, occupational, and socio-emotional difficulties commonly faced by college students with underdeveloped executive functions. This program consists of ten sessions delivered in a group format to help college students improve their academic performance. Over the course of these sessions, participants learn strategies to prioritize tasks and assignments; schedule and manage life responsibilities; cope with life stressors; identify relevant on-campus resources; prepare for upcoming exams; take well-structured notes; maintain motivation; and several other strategies designed to reach their academic goals. Each session builds on earlier sessions, so previously learned skills lay the foundation for the successful implementation of newly learned skills. This practical and easy-to-implement program includes detailed session notes for group leaders and

reproducible handouts for participants including in-session activities, session summaries, and homework assignments. This treatment manual is an essential resource for mental health providers who deliver interventions to students enrolled in post-secondary institutions pursuing undergraduate or graduate level degrees.

algebraic concepts are found throughout the text. An average of over five Activity Labs per chapter ensures students receive the visual and special instruction necessary to conceptualize these abstract concepts, better preparing them for advanced math courses.

**Pediatrics Morning Report: Beyond the Pearls** is a case-based reference that covers the key material included on the USMLE Step 2 and Step 3, as well as the pediatric clerkship. Focusing on the practical information you need to know, it teaches how to analyze a clinical vignette in the style of a morning report conference, sharpening your clinical decision-making skills and helping you formulate an evidence-based approach to realistic patient scenarios. Each case has been carefully chosen and covers scenarios and questions frequently encountered on the Pediatrics boards, shelf exams, and clinical practice, integrating both basic science and clinical pearls. "Beyond the Pearls" tips and secrets (all evidence-based with references) provide deep coverage of core material. "Morning Report" / "Grand Rounds" format begins with the chief complaints to the labs, relevant images, and includes a "pearl" at the end of the case. Questions are placed throughout the case to mimic practical decision making both in the hospital and on the board exam. Written and edited by experienced teachers and clinicians; each case has been reviewed by board certified attending/practicing physicians.
