Creativity is getting new attention in today's America—along the way revealing fault lines in U.S. culture. Surveys show people overwhelmingly seeing creativity as both a desirable trait and a work enhancement, yet most say

they just aren't creative. Like beauty and wealth, creativity seems universally desired but insufficiently possessed.

Businesses likewise see innovation as essential to productivity and growth, but can't bring themselves to risk new ideas. Even as one's "inner artist" is hyped by a booming self-help industry, creative education dwindles in U.S. schools.

Anxious Creativity: When Imagination Fails examines this conceptual mess, while focusing on how America's current edginess dampens creativity in everyone.

Written in an engaging and accessible style, *Anxious Creativity* draws on current ideas in the social sciences, economics, and the arts. Discussion centers on the knotty problem of reconciling the expressive potential in all people with the nation's tendency to reward only a few. Fortunately, there is some good news, as scientists, economists, and creative

Building on these prospects, the book argues that America's innovation crisis demands a rethinking of individualism, competition, and the ways creativity is rewarded.

The creative mind is a state that can't be found when crossing doors within our own self, and can't be imagined or forced either. It is a personality type which, although developed, can't be interchanged with other personality types. Artists or creatives are like travelers between the spiritual and material worlds, bridging the integration of these two realms in their work and attitude towards society. This is true despite what society sees in these personalities, as some may be seen as kind or eccentric, while others may be viewed as obnoxious and impertinent, even rude.

This challenge creates a pressure in the mind of such individuals that may lead them to egotistic rants or depressive states, both of which are reactions to the effects created in others, most of whom are uncomfortable with their existence. At its highest state, the creative mind bends the laws of the physical world, in time, dimensions and even forms, and can make the unexplainable appear real. The most enlightened of all creatives can write a book, produce a music masterpiece, or give form to an extraordinary and original painting in just a couple of hours. This is possible through the control of various processes that are not visible to the many, due to their unknown state about the complexity and level of

It's a cliché of the information age that globalization has made place irrelevant, that one can telecommute as effectively from New Zealand as New York. But it's not true, Richard Florida argues, relying on twenty years of innovative research in urban studies, creativity, and demographic trends. In fact, as new units of economic growth called mega-regions become increasingly specialized, the world is becoming more and more "spiky" — divided between flourishing clusters of talent, education and competitiveness, and moribund

More people than ever before now have the opportunity to choose where to live, but at different points in our lives we need different kinds of places, he points out — what a couple of recent college graduates want from their city isn’t necessarily what a retiree is looking for. You have to find the place that suits you best: a boho-burb neighbourhood isn’t likely to be the best fit for patio man. So, for the first time, Who’s Your City? ranks cities by their fitness for
