***What can we teach kids today that will have utility ten or fifteen years from now? Angela Kohnen and Wendy Saul propose an approach to information literacy that goes beyond the teaching of discreet, easily outdated skills. Instead they use activity to help students build identities as curious individuals empowered to ask their own questions and able to navigate their information-filled world in pursuit of credible answers. A generalist is curious, open-minded, skeptical, and persistent in their quest for information. Thinking Like a Generalist demonstrates what it means to take a generalist stance in instruction and provides a set of teaching tools to be able to pass those skills to students--skills that will transfer beyond the walls of the classroom. Inside you'll find the following: a thorough introduction to what it means to be a "generalist", and how to develop the practices and tools that help generalists navigate the world we live in a focus on the teacher becoming a generalist and tips for modeling those practices in the classroom detailed instructions on how to write a unit of study that emphasizes generalist literacy skills and includes an overview and examples of five different units how to use the authors' read-aloud-think-aloud strategy to orient students to generalist tools and practices The ideas, strategies, and examples in Thinking Like a Generalist will give you the tools to think like a generalist and then pass that knowledge on to your students, guiding them to become inquisitive, lifelong learners and preparing them for a future that we can't yet imagine.***

At first, with no adult supervision, their freedom is something to celebrate. This far from civilization they can do anything they want. Anything. In the current volume, the selected studies have been grouped into three thematic sections, presenting readers with a set of distinct but related research on meaningful issues for a modern learning experience. The first three chapters present professional and teacher development perspectives and collectively shed light on how to develop, maintain, and improve pre and in-service teacher training and professional development. The second set of four chapters provide research findings that describe the results of direct applications of modern learning elements through course assignments and teaching approaches. The final five chapters focus on critical thinking and range in their focus from classroom-based studies to full-scale curriculum reform. The collection of chapters presented in this volume represents the eclectic nature of modern learning experiences and demonstrate its applicability across educational contexts and disciplines. The chapters resonate with other educational researchers in search of novel ways of creating, facilitating, and investigating modern learning experiences.

An introduction to the field of applied ontology with examples derived particularly from biomedicine, covering theoretical components, design practices, and practical applications. In the era of "big data," science is increasingly information driven, and the potential for computers to store, manage, and integrate massive amounts of data has given rise to such new disciplinary fields as biomedical informatics. Applied ontology offers a strategy for the organization of scientific information in computer-tractable form drawing on concepts not only from computer and information science but also from linguistics, logic, and philosophy. This book provides an introduction to the field of applied ontology that is of particular relevance to biomedicine, covering theoretical components of ontologies, best practices for ontology design, and examples of biomedical ontologies in use. After defining an ontology as a representation of the type of entities in a given domain, the book distinguishes between different kinds of

ontologies and taxonomies, and shows how applied ontology draws on more traditional ideas from metaphysics. It presents the core features of the Basic Formal Ontology (BFO), now used by over one hundred ontology projects around the world, and offers examples of domain ontologies that utilize BFO. The book also describes Web Ontology Language (OWL), a common framework for Semantic Web technologies. Throughout, the book provides concrete recommendations for the design and construction of domain ontologies.

Ross Morrison McGill, bestselling author of *Mark. Plan. Teach.* and *Teacher Toolkit*, pinpoints the top ten key issues that schools in Great Britain are facing today, and provides strategies and techniques for how these issues can be tackled most effectively. We often talk about the challenges of teacher recruitment and retention, about new initiatives and political landscape day in, day out, teachers and schools are delivering exceptional teaching and most of it is invisible. Ross uncovers, celebrates, analyses and disseminates best practice in teaching. This is supported by case studies and research undertaken by Ross in ten primary and secondary schools across Great Britain, including a pupil referral unit and private, state and grammar schools, as well as explanations from influential educationalists as to why and how these ideas work. Ross explores the issues of marking and assessment, planning, teaching and learning, teacher wellbeing, student mental health, behaviour and exclusions, SEND, curriculum, research-led practice and CPD. This book inspires readers to open their eyes to how particular problems can be resolved and how other schools are already doing this effectively. It is packed with ideas and advice for all primary and secondary classroom teachers and school leaders keen to provide the best education they possibly can for our young people today.

This volume reflects the development and theoretical foundation of a new paradigm for critical thinking based on inquiry. The field of critical thinking, as manifested in the Informal Logic movement, developed primarily as a response to the inadequacies of formalism to represent argumentative practice and to provide useful argumentative skills to students. Because of this primary focus of the field has been on informal arguments rather than formal reasoning. Yet the formalist history of the field is still evident in its emphasis, with respect to both theory and pedagogy, on the structure and evaluation of individual, de-contextualized arguments. It is our

view that such a view of critical thinking is excessively narrow and limited, failing to provide understanding of argumentation as largely a matter of comparative evaluation of a variety of contending positions and arguments with the goal of reaching a reasoned judgment on an issue. As a consequence, traditional critical thinking instruction is problematic in failing to provide the reasoning skills that students need in order to accomplish this goal. Instead, the goal of critical thinking instruction has been seen largely as a defensive one: of learning to not fall prey to inadequate, or fallacious arguments.
