Success as a Psychology Major, First Edition by David E. Copeland and Jeremy A. Houska is an essential resource for any student interested in pursuing an undergraduate degree in psychology. Built from the ground up with input from hundreds of psychology students, this First Edition answers every question a trepidatious undergraduate may have. Success as a Psychology Major opens with practical tools on how to be a successful student, walks readers through the psychology curriculum, highlights key skills to develop, and presents the various academic and career paths to take after graduation. Unique chapters on joining a research lab, professional organizations and clubs, documenting students' accomplishments, and practical tools for managing time and money provide students with resources they will use throughout their academic career. Presented in a modular format with a student-friendly narrative, this text is a step-by-step road map to a fulfilling and meaningful experience as a student of psychology. Research in Nursing, Midwifery and Allied Health provides students with the theory to understanding research frameworks in nursing and allied health. Using practical examples, this text applies the theory to practice in a number of updated cases that reflect students across the nursing, midwifery and allied health areas. The research framework introduced in the book has three different intersecting purposes: (i) to show students how to critically appraise existing research (ii) to show students how the results of research can be used in clinical practice to inform patient care (iii) to conduct their own research. The sixth edition includes more content than ever before linking research to evidence-based practice, helpfully sign posted throughout the text in new evidence-based practice boxes. Research in Nursing, Midwifery and Allied Health supports instructors as they guide new nursing researchers through the entire research process in a practical and easy to read step-by-step guide. The new four-colour design will be a welcome addition to Cengage's suite of Nursing texts, as well as new CourseMate Express website and Search Me! Nursing, giving students unique access to current journals and news articles specific to nursing and health research.

This edited volume explores how digital games have the potential to engage learners both within and outside the classroom and to encourage interaction in the target language. This is the first dedicated collection of papers to bring together state-of-the-art research in game-based learning.

On this site, www.researchpaper.samfundsliteratur.dk, you can find a range of potential research topics appropriate for short and long research papers. You can also find several examples illustrating and further explaining the advice contained in this book, including examples of research questions, analyses, theories, introductions, methodology chapters, and more.

"The Yellow Wallpaper" is a short story by American writer Charlotte Perkins Gilman, first published in January 1892 in The New England Magazine.[1] It is regarded as an important early work of American feminist literature, due to its illustration of the attitudes towards mental and physical health of women in the 19th century. Narrated in the first person, the story is a collection of journal entries written by a woman whose physician husband

(John) has rented an old mansion for the summer. Forgoing other rooms in the house, the couple moves into the upstairs nursery. As a form of treatment, the unnamed woman is forbidden from working, and is encouraged to eat well and get plenty of air, so she can recuperate from what he calls a "temporary nervous depression - a slight hysterical tendency", a diagnosis common to women during that period

"Introduction to Educational Research: A Critical Thinking Approach 2e is an engaging and informative core text that enables students to think clearly and critically about the scientific process of research. In achieving its goal to make research accessible to all educators and equip them with the skills to understand and evaluate published research, the text examines how educational research is conducted across the major traditions of quantitative,

qualitative, mixed methods, and action research. The text is oriented toward consumers of educational research and uses a thinking-skills approach to its coverage of major ideas"-

How to Critique Journal Articles in the Social Sciences, by Scott R. Harris, is a brief, introductory book that provides readers with a step-by-step guide to reading and understanding a social science research article. The author demonstrates the many strengths of social research, including its advantages over ordinary ways of knowing things, and, at the same time, points out that research is inevitably flawed. Rather than naively assuming that good research simply produces “The Truth” or cynically asserting that research is hopelessly biased and futile, this book instills in readers a critical perspective—one that appreciates the strengths and weaknesses of any piece of scholarship.

A NEW YORK TIMES BESTSELLER “ The fights against hunger, homelessness, poverty, health disparities, poor schools, homophobia, transphobia, and domestic violence are feminist fights. Kendall offers a feminism rooted in the livelihood of everyday women. ” —Ibram X. Kendi, #1 New York Times-bestselling author of How to Be an Antiracist, in The Atlantic “ One of the most important books of the current moment. ” —Time “ A rousing call to action... It should be required reading for everyone. ” —Gabrielle Union, author of We ’ re Going to Need More Wine A potent and electrifying critique of today ’ s feminist movement announcing a fresh new voice in black feminism Today’s feminist movement has a glaring blind spot, and paradoxically, it is women. Mainstream feminists rarely talk about meeting basic needs as a feminist issue, argues Mikki Kendall, but food insecurity, access to quality education, safe neighborhoods, a living wage, and medical care are all feminist issues. All too often, however, the focus is not on basic survival for the many, but on increasing privilege for the few. That feminists refuse to prioritize these issues has only exacerbated the age-old problem of both internecine discord and women who rebuff at carrying the title. Moreover, prominent white feminists broadly suffer from their own myopia with regard to how things like race, class, sexual orientation, and ability intersect with gender. How can we stand in solidarity as a movement, Kendall asks, when there is the distinct likelihood that some women are oppressing others? In her searing collection of essays, Mikki Kendall takes aim at the legitimacy of the modern feminist movement, arguing that it has chronically failed to address the needs of all but a few women. Drawing on her own experiences with hunger, violence, and hypersexualization, along with incisive commentary on reproductive rights, politics, pop culture, the stigma of mental health, and more, Hood Feminism delivers an irrefutable indictment of a movement in flux. An unforgettable debut, Kendall has written a ferocious clarion call to all would-be feminists to live out the true mandate of the movement in thought and in deed.

Voted America’s Best-Loved Novel in PBS’s The Great American Read Harper Lee’s Pulitzer Prize-winning masterpiece of honor and injustice in the deep South—and the heroism of one man in the face of blind and violent hatred One of the most cherished stories of all time, To Kill a Mockingbird has been translated into more than forty languages, sold more than forty million copies worldwide, served as the basis for an enormously popular motion picture, and was voted one of the best novels of the twentieth century by librarians across the country. A gripping, heart-wrenching, and wholly remarkable tale of coming-of-age in a South poisoned by virulent prejudice, it views a world of great beauty and savage inequities through the eyes of a young girl, as her father—a crusading local lawyer—risks everything to defend a black man unjustly accused of a terrible crime. Gelijke behandeling en seksuele vorming in het onderwijs staan centraal in deze bundeling essays. Nieuw zijn deze thema's niet voor leerkrachten, maar wel is er nog maar weinig aandacht gegaan naar de combinatie van deze twee onderwerpen. De samenstellers zijn ervan overtuigd dat een goede seksuele vorming op school sekse-gelijkheid in de hand kan werken.

De eerste hoofdstukken zijn bedoeld als inductie op het thema. De evolutie van idee ë n over seksuele vorming, seksualiteit en gelijke behandeling is het onderwijs worden in hun historische context geschetst. Daarop voortbouwend worden een aantal doelstellingen geformuleerd waaraan seksuele vorming in het onderwijs zou kunnen voldoen. Verder is er ook aandacht voor volgende onderwerpen: seksuele intimidatie, homoseksualiteit en seksualiteit en gehandicapten.

Reading as a student demands new skills and new disciplines. Students must read. They must read to inform themselves about the subjects they are studying and to allow them to write assignments, reports and dissertations. Though most students can read fairly well, few can make as much or as efficient use as possible of the time they devote to reading for academic purposes. Many guides to study offer a pot pourri of techniques for improving reading skills. None gives as full a treatment of this essential and underpinning area of academic life as Reading at University. The authors believe that students must change both the ways in which they read and the ways in which they think about reading. This book offers effective and efficient strategies for fulfilling students' reading and study potential.

Research Methods for Forensic Psychologists is an accessible and comprehensive textbook that introduces students to the research process in forensic psychology. Adopting a problem-based learning approach, this book offers a 'how-to' guide to the whole research process and empowers readers to develop their own programme of research, from initial vague ideas, to developing a research question, to carrying out a methodologically rigorous research project, to disseminating the findings. The text is centred on five case studies, sufficiently different in nature to address the most common research methodologies. Each case study is linked with a specific research question that will be used to illustrate the research process throughout the rest of the book. Topics covered in the book include: Design and Planning, including a literature search, a discussion of different sorts of data, practical and feasibility issues, research ethics and developing a research proposal. Conducting research, including the submission of ethics proposals and responding to feedback, collecting data and dealing with the problems and challenges of analysing data. Dissemination of findings, an overview of the different types of papers, with examples listed and other methods of disseminating findings discussed, such as conference presentations and the use of social media. Throughout, issues of common difficulty or confusion are highlighted and activities are provided for readers to consider and apply the information discussed further. Additional reading sections and summaries are also provided at the end of each chapter. This book is essential reading for advanced students in Forensic Psychology, as well as trainees and practitioners within relevant forensic psychology organisations.

This Second Edition of Diana Ridley’s bestselling guide to the literature review outlines practical strategies for reading and note taking, and guides the reader on how to conduct a systematic search of the available literature, and uses cases and examples throughout to demonstrate best practice in writing and presenting the review. New to this edition are examples drawn from a wide range of disciplines, a new chapter on conducting a systematic review, increased coverage of issues of evaluating quality and conducting reviews using online sources and online literature and enhanced guidance in dealing with copyright and permissions issues.

An exploration of why we play video games despite the fact that we are almost certain to feel unhappy when we fail at them. We may think of video games as being "fun," but in The Art of Failure, Jesper Juul claims that this is almost entirely mistaken. When we play video games, our facial expressions are rarely those of happiness or bliss. Instead, we frown, grimace, and shout in frustration as we lose, or die, or fail to advance to the next level. Humans may have a fundamental desire to succeed and feel competent, but game players choose to engage in an activity in which they are nearly certain to fail and feel incompetent. So why do we play video games even though they make us unhappy? Juul examines this paradox. In video games, as in tragic works of art, literature, theater, and cinema, it seems that we want to experience unpleasantness even if we also dislike it. Reader or audience reaction to tragedy is often explained as catharsis, as a purging of negative emotions. But, Juul points out, this doesn't seem to be the case for video game players. Games do not purge us of unpleasant emotions; they produce them in the first place. What, then, does failure in video game playing do? Juul argues that failure in a game is unique in that when you fail in a game, you (not a character) are in some way inadequate. Yet games also motivate us to play more, in order to escape that inadequacy, and the feeling of escaping failure (often by improving skills) is a central enjoyment of games. Games, writes Juul, are the art of failure: the singular art form that sets us up for failure and allows us to experience it and experiment with it. The Art of Failure is essential reading for anyone interested in video games, whether as entertainment, art, or education.

The second edition of Assessment for Excellence arrives as higher education enters a new era of the accountability movement. In the face of mandates such as results-based funding and outcomes-based accreditation, institutions and assessment specialists are feeling increasingly pressured to demonstrate accountability

to external constituencies. The practice of assessment under these new accountability pressures takes on special significance for the education of students and the development of talent across the entire higher education system. This book introduces a talent development approach to educational assessment as a counter to prevailing philosophies, illustrating how contemporary practices are unable to provide institutions with meaningful data with which to improve educational outcomes. It provides administrators, policymakers, researchers, and analysts with a comprehensive framework for developing new assessment programs to promote talent development and for scrutinizing existing policies and practices. Written for a wide audience, the book enables the lay reader to quickly grasp the imperatives of a properly-designed assessment program, and also to gain adequate statistical understanding necessary for examining current or planned assessment policies. More advanced readers will appreciate the technical appendix for assistance in conducting statistical analyses that align with a talent development approach. In addition, institutional researchers will benefit from sections that outline the development of appropriate student databases. The text is presented in chunks of approximately 10 True/False questions on specific concepts in research methodology and statistics. This is followed by clear explanations, from first principles, that assume no prior knowledge. This book is for the paper critique section of the MRCPsych 2 examination but clinical tutors, organisers of journal clubs and clinicians interested in research will find the book helpful. It is particularly invaluable for clinicians interested in evidence based medicine. This book is intended to be used as an aide memoir, carried in the pocket and referred to as often as necessary. It enables self-assessment to be carried out in the hope that any gaps in knowledge will be identified. Much of this book focuses on practical application of statistical and research methodology concepts into critical paper reading. The reader is encouraged to attempt the questions before the reading the suggested answers.

"The motivation for this book was the realization that although many academics and others are called on to do reviewing, very few of them have any formal training, or sometimes, informal training, in how to referee. We who write all know how disconcerting it is to get a review that is either mindless or worse, savage. The goal of this book is to teach anyone who does reviewing the basic skills needed to be a competent reviewer. These skills include competence in evaluating psychological work and competence in communicating that evaluation. The chapters cover a wide variety of review types, ranging from reviewing articles to reviewing grant proposals to reviewing book proposals. This book is for anyone who needs to review and who wants to ensure that he or she writes the same kind of review he or she would hope to receive"--Preface. The far right is back with a vengeance. After several decades at the political margins, far-right politics has again taken center stage. Three of the world ' s largest democracies – Brazil, India, and the United States – now have a radical right leader, while far-right parties continue to increase their profile and support within Europe. In this timely book, leading global expert on political extremism Cas Mudde provides a concise overview of the fourth wave of postwar far-right politics, exploring its history, ideology, organization, causes, and consequences, as well as the responses available to civil society, party, and state actors to challenge its ideas and influence. What defines this current far-right renaissance, Mudde argues, is its mainstreaming and normalization within the contemporary political landscape. Challenging orthodox thinking on the relationship between conventional and far-right politics, Mudde offers a complex and insightful picture of one of the key political challenges of our time.

Fully revised for its second edition, the Oxford Handbook of Mental Health Nursing is the indispensable resource for all those caring for patients with mental health problems. The Nursing Companion

A guide to completing your research project

Do your students ever struggle to grasp what exactly constitutes evidence or struggle to see how it applies to practice? Would you like them to feel more confident about critiquing evidence? The need for an evidence base for nursing practice is widely accepted. However, what constitutes evidence and how nurses might apply it to practice is not always clear. This book guides nursing students through the process of identifying, appraising and applying evidence in nursing practice. It explores a wide range differing sources of evidence and knowledge, and helps students to develop key skills of critiquing research and using evidence in clinical decision making.

Fosters fundamental skills needed to critically evaluate evidence from published research studies This is the first resource to provide APRN students and practicing clinicians with a step-by-step guide to critically analyze evidence from research studies. As part of a profession that relies on best evidence, nurses need to be able to effectively assess research articles. Equipped with these skills, nurses will lead an informed practice and improve patient care. With 14 qualitative and quantitative studies, chapters use previously published research articles to demonstrate the actual critique process. This text delves past outlining the elements of critique to teach by example, walking through every part of a research article, from the title to the conclusion, and highlighting specific queries which need to be answered to craft a strong critique. The research articles in this book offer a broad range of clinical areas and diverse methodologies to highlight the fundamental differences between qualitative and quantitative studies, their underlying paradigms and relative strengths and weaknesses. With a consistent, robust critiquing template, this content can easily be applied to countless additional research studies. Key Features: Comprises the only text to offer research critiques in nursing Provides actual examples of critiques of published research papers by experienced nurse researchers and educators Showcases a diverse range of research studies Structures critiques consistently to enable replication of the process Useful to hospitals, especially those with Magnet certification.

Bringing together a team of leading international experts in the field of research, this book provides an up-to-date and accessible overview of applied research methods in the prehospital environment. Written to support the needs of the paramedicine, emergency medicine and wider healthcare communities in this rapidly advancing research setting, the authors introduce the key areas of research design and methods, evidence-based practice, ethics and quality improvement for both the novice and the more advanced researcher. Relevant examples of prehospital research are also included to fully explain and illustrate the key approaches. High-quality, robust evidence is of the utmost importance to inform prehospital clinical practice and ensure better patient care. This book is essential reading for anyone interested in undertaking research within the prehospital or emergency care setting, including undergraduate and postgraduate students in paramedic science, medicine, nursing and allied health.

Given the explosion of information and knowledge in the field of Life Sciences, adapting primary literature as materials in course work as part of active learning seems to be more effective in improving scientific literacy among science undergraduates than the pure transmission of content knowledge using traditional textbooks. In addition, students also read research articles as part of undertaking laboratory research projects useful for preparing them for graduate school. As such, a good grasp of reading and analytical skills is needed for students to understand how their research project contributes to the field that they are working in. Such skills are being taught at UK and USA universities. In Asia, this approach in teaching has not yet been as widespread, although similar ideas are beginning to be used in education. Written as a quick guide for undergraduate students and faculty members dealing with scientific research articles as part of a module or research project, this book will be useful, especially in Asia, for students and faculty members as the universities look to incorporating the use of scientific research articles in their undergraduate teaching. For Life Science students, the first time they encounter a primary literature can be rather daunting, though with proper guidance, they can overcome the initial difficulties and become confident in dealing with scientific articles. This guidebook provides a structured approach to reading a research article, guiding the reader step-by-step through each section, with tips on how to look out for key points and how to evaluate each section. Overall, by helping undergraduate students to overcome their anxieties in reading scientific literature, the book will enable the students to appreciate better the process of scientific investigations and how knowledge is derived in science.

Thomas Hardy (2nd June 1840 – 11th January 1928) was an English novelist and poet. He was influenced by Romanticism and it has been reflected in his novels and poetry. He was criticised by the Victorian society on the issue of the declining status of rural people in Britain. He was basically a poet. Initially he started writing poems. But he gained fame after his novels, such as – Far from the Madding Crowd, The Mayor of Casterbridge, Tess of the d'Urbervilles and Jude the Obscure. Two of his novels, Tess of the d'Urbervilles and Far from the Madding Crowd, were listed in top 50 on the BBC survey- The Big Road. The story of Tess of the d'Urbervilles revolves around a 16 year old very simple girl, named Tess Durbeyfield, who is the eldest daughter of John and Joan Durbeyfield. Since the family suffers acute financial crisis, so they approach the d'Urbervilles family who are holding huge land and having lot of money. There Tess meets Alec d'Urberville, who finds himself attracted to Tess. When Tess started working as a caretaker of Alec's blind mother's poultry farm, Alec gets an opportunity to rape her. After that there are many ups and down in Tess's life. She meets Mr. Crick for another job. She also meets one more fellow Angel Clare, who is a travelling farmer's apprentice. They marry each other. But after knowing her story, again there is a turn in Tess's life. How she manages all such situation, how she meets all the financial aspects, lot of things happen with Tess. Even Alec and Angel both start searching for Tess. So, the story has become very interesting, full of climax. How Tess meets Alec or Angel? Whether she gets involved with any of these two again? There are so many presumptions. Readers will surely enjoy the story, full of suspense and never expected ups & downs in the life of all the characters. At last, how Angel helps Tess and her family is the climax. Go ahead and must grab the book. A must read book for self development and how to be a good leader.

A Step-by-Step Guide for Students

This timely resource provides a framework for teaching students how to think qualitatively and become more critical and reflexive researchers. Presented are a wealth of pedagogical tools that instructors across the disciplines can tailor to their own needs, including thought-provoking discussion questions, group work exercises, and field activities. The authors discuss issues and choices in course design, including approaches to assessment and grading, and share sample syllabi for both online and face-to-face course formats. Exploring the complexities and debates that surround teaching qualitative research, the book argues for a holistic model of preparing novice researchers. It demonstrates effective ways to engage students in the qualitative inquiry process from start to finish—from understanding positionality and crafting a research problem to writing up findings for different audiences.
