Winner of the University of San Diego Outstanding Leadership Book Award 2012! Shortlisted for the British Psychological Society Book Award 2011! Shortlisted for the CMI (Chartered Management Institute) Management Book of the Year Award 2011–2012! According to John Adair, the most important word in the leader's vocabulary is "we" and the least important word is "I". But if this is true, it raises one important question: why do psychological analyses of leadership always focus on the leader as an individual – as the great "I"? One answer is that theorists and practitioners have never properly understood the psychology of "we-ness". This book fills this gap by presenting a new psychology of leadership that is the result of two decades of research inspired by social identity and self-categorization theories. The book argues that to succeed, leaders need to create, champion, and embed a group identity in order to cultivate an understanding of 'us' of which they themselves are representative. It also shows how, by doing this, they can make a material difference to the groups, organizations, and societies that they lead. Written in an accessible and engaging style, the book examines a range of central theoretical and practical issues, including the nature of group identity, the basis of authority and legitimacy, the dynamics of justice and fairness, the determinants of followership and charisma, and the practice and politics of leadership. The book will appeal to academics, practitioners and students in social and organizational psychology, sociology, political science and anyone interested in leadership, influence and power. A New York Times Notable Book of 2020 A Bloomberg Best Non-Fiction

Book of 2020 A Behavioral Scientist Notable Book of 2020 A Human Behavior & Evolution Society Must-Read Popular Evolution Book of 2020 A bold, epic account of how the co-evolution of psychology and culture created the peculiar Western mind that has profoundly shaped the modern world. Perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich, and Democratic. If so, you're rather psychologically peculiar. Unlike much of the world today, and most people who have ever lived, WEIRD people are highly individualistic, self-obsessed, control-oriented, nonconformist, and analytical. They focus on themselves—their attributes, accomplishments, and aspirations—over their relationships and social roles. How did WEIRD populations become so psychologically distinct? What role did these psychological differences play in the industrial revolution and the global expansion of Europe during the last few centuries? In *The WEIRDest People in the World*, Joseph Henrich draws on cutting-edge research in anthropology, psychology, economics, and evolutionary biology to explore these questions and more. He illuminates the origins and evolution of family structures, marriage, and religion, and the profound impact these cultural transformations had on human psychology. Mapping these shifts through ancient history and late antiquity, Henrich reveals that the most fundamental institutions of kinship and marriage changed dramatically under pressure from the Roman Catholic Church. It was these changes that gave rise to the WEIRD psychology that would coevolve with impersonal markets, occupational specialization, and free competition—laying the foundation for the modern world. Provocative and engaging in both its broad scope and its surprising details, *The WEIRDest People in the World* explores how culture, institutions, and psychology shape one another, and explains what this means for both our most personal sense of who we are as individuals and also the large-scale social, political, and economic forces that drive human history. Includes black-and-white illustrations.

It is divided into six sections: Foundations and General Considerations, which includes chapters on the history of hypnosis and measures of hypnotizability; Theories of Hypnosis, in which hypnosis is examined within the context of various therapeutic constructs; Hypnotic Techniques, which includes a how-to primer for trained therapists to conduct hypnotic inductions, as well as chapters about the integration of hypnosis with mindfulness strategies; Treating Psychological Problems and Populations, which discusses the use of hypnosis in treatment for

depression, PTSD and Anxiety; Health and Sport Psychology, which examines hypnotic treatments for pain control and surgery as well as for maximizing athletic performance; and finally Further Issues and Extensions, which addresses, among other things, popular and cross-cultural conceptions of hypnosis.
