

Cv Manisha Sethi A Central University

NEW YORK TIMES BESTSELLER • National Book Award Finalist • This "eyewitness history of the first order ... should be read by anyone who wants to understand how things went so badly wrong in Iraq" (The New York Times Book Review). The Green Zone, Baghdad, Iraq, 2003: in this walled-off compound of swimming pools and luxurious amenities, Paul Bremer and his Coalition Provisional Authority set out to fashion a new, democratic Iraq. Staffed by idealistic aides chosen primarily for their views on issues such as abortion and capital punishment, the CPA spent the crucial first year of occupation pursuing goals that had little to do with the immediate needs of a postwar nation: flat taxes instead of electricity and deregulated health care instead of emergency medical supplies. In this acclaimed firsthand account, the former Baghdad bureau chief of The Washington Post gives us an intimate portrait of life inside this Oz-like bubble, which continued unaffected by the growing mayhem outside. This is a quietly devastating tale of imperial folly, and the definitive history of those early days when things went irrevocably wrong in Iraq.

Orthopedic Traumatology An Evidence-Based Approach Springer

This book is a printed edition of the Special Issue " Algorithms for Scheduling Problems" that was published in Algorithms

The book features research papers presented at the International Conference on Emerging Technologies in Data Mining and Information Security (IEMIS 2018) held at the University of Engineering & Management, Kolkata, India, on February 23–25, 2018. It comprises high-quality research by academics and industrial experts in the field of computing and communication, including full-length papers, research-in-progress papers, case studies related to all the areas of data mining, machine learning, IoT and information security.

Selected Topics

Soft Computing: Theories and Applications

Advances in Simulation and Digital Human Modeling

Emerging Technologies in Data Mining and Information Security

A Novel

Evidence-Based Orthopedics

Percutaneous Intervention for Coronary Chronic Total Occlusion

This book constitutes the refereed proceedings of the First International Conference on Advanced Informatics for Computing Research , ICAICR 2017, held in Jalandhar, India, in March 2017. The 32 revised full papers presented were carefully reviewed and selected from 312 submissions. The papers are organized in topical sections on computing methodologies, information systems, security and privacy, network services.

The book features original papers from the 2nd International Conference on Smart IoT Systems: Innovations and Computing (SSIC 2019), presenting scientific work related to smart solution concepts. It discusses computational collective intelligence, which includes interactions between smart devices, smart environments and smart interactions, as well as information technology support for such areas. It also describes how to successfully approach various government organizations for funding for business and the humanitarian technology development projects. Thanks to the high-quality content and the broad range of the topics covered, the book appeals to researchers pursuing advanced studies.

This book comprises select peer-reviewed papers from the International Conference on VLSI, Communication and Signal processing (VCAS) 2019, held at Motilal Nehru National Institute of Technology (MNNIT) Allahabad, Prayagraj, India. The contents focus on latest research in different domains of electronics and communication engineering, in particular microelectronics and VLSI design, communication systems and networks, and signal and image processing. The book also discusses the emerging applications of novel tools and techniques in image, video and multimedia signal processing. This book will be useful to students, researchers and professionals working in the electronics and communication domain.

This book includes high-quality research papers presented at the Third International Conference on Innovative Computing and Communication (ICICC 2020), which is held at the Shaheed Sukhdev College of Business Studies, University of Delhi, Delhi, India, on 21-23 February, 2020. Introducing the innovative works of scientists, professors, research scholars, students and industrial experts in the field of computing and communication, the book promotes the transformation of fundamental research into institutional and industrialized research and the conversion of applied exploration into real-time applications.

Clinical Research for Surgeons

To achieve progress in society and business practices, more entrepreneurship is needed to encourage action and enhance social capital in society, and transformational entrepreneurship may be the key.

Transformational entrepreneurship offers a way of integrating sustainability practices whilst focusing on sustainable future trends. This book discusses how transformational entrepreneurship uses novel business practices to reduce inequality in the marketplace and how it transforms society through creative solutions that enable change. The book provides useful insight into better understanding this emerging

concept.

General Description of the Series: Neurotransmitter Transporters focuses on biochemical, electrophysiological, pharmacological, molecular, and cell biological approaches used to study neurotransmitter transport systems. The articles provide detailed descriptions of procedures that should enable the reader to understand how they are accomplished and to repeat or adapt them for their own experimental needs. This book is the first to focus on methods that have been the basis for the rapid development of this area. **General Description of the Series: The critically acclaimed laboratory standard for more than forty years, Methods in Enzymology** is one of the most highly respected publications in the field of biochemistry. Since 1955, each volume has been eagerly awaited, frequently consulted, and praised by researchers and reviewers alike. Now with more than 300 volumes (all of them still in print), the series contains much material still relevant today--truly an essential publication for researchers in all fields of life sciences. **Key Features** * The transport of CNS neurotransmitter transporters * Electrophysiological, biochemical, molecular, cellular biological, pharmacological, neurochemical, and structural approaches * Both plasma and vesicular carriers

The book describes step-wise management of clinical emergencies seen every day in Intensive care units (ICUs). As a practical guide, clinicians can refer to it on a day-to-day basis during their work hours, or while in transit to update their knowledge. Targeted readers are intensivists, critical care specialists, and residents involved in the care of patients admitted in ICUs. This handbook covers an array of specialties such as cardiology, pulmonology, gastroenterology, neurology, nephrology, traumatology, and toxicology. This monograph provides point-of-care treatment guidance and will serve as a ready-reckoner for physicians to quickly learn the management steps in a methodical manner.

The present book has been designed to bind prime knowledge of climate change-induced impacts on various aspects of our environment and its biological diversity. The book also contains updated information, methods and tools for the monitoring and conservation of impacted biological diversity.

An Evidence-Based Approach

Praise for this book: Readable, relevant, and interesting...this book cuts through jargon, recapitulates key concepts, and clarifies with current examples from the literature...recommend[ed].--Doody's Review **Clinical Research for Surgeons is a practical guide for understanding, planning, conducting, and evaluating surgical research. It covers the principles of evidence-based surgery and applies these principles to the design of suitable research studies. The reader will come to fully understand important concepts such as case-control study, prospective cohort study, randomized trial, and reliability study. The book provides valuable discussions of the critical appraisal of published clinical studies, allowing the reader to learn how to evaluate the quality of such studies with respect to measuring outcomes and to make effective use of all types of evidence in patient care. Highlights: Insights from experienced surgeons and veteran researchers Easy-to-reference text boxes with Key Concepts, Jargon Simplified, and Examples from the Literature Coverage of both open and minimally-invasive surgical procedures 50 illustrations demonstrating key points This book is a valuable reference for clinicians and residents in a range of disciplines, including general surgery, orthopedic surgery, plastic and reconstructive surgery, urology, neurosurgery, otolaryngology-head and neck surgery, interventional radiology, cardiac surgery.**

Interest for Jain studies has increased considerably in the last decades. Scholars will be thankful to the organizers of the 12th World Sanskrit Conference who, for the first time in such a conference, planned a special panel on this field. The ten papers collected in this volume show the importance, abundance and variety of topics that can be considered. Philological analysis still proves useful, whether it concentrates on one particular work or on clusters of texts. A study of the strategy of narrative and predication needs a historical approach, kavya literature lends itself to renewed and indepth interpretations. Finally the reader will observe the constant renewal of Jainism, as some new literary genre or a new sect are seen to have gained momentum in modern times.

A practical and technical handbook providing operators with a step-by-step description of how to perform some of the techniques involved in the procedures, and how to troubleshoot some of the problems along the way. Examples with pictures will be provided, along with live angiographies. At the end of each chapter, the author will be provided with 3 questions to answer. Those questions will be developed by the editor and the contributors. The idea is to provide a quick reference to the most current problems encountered with a specific issue developed in the chapter. Nowadays, the busy clinician is unlikely to exclusively rely on lengthy textbooks to learn specific complex techniques. That is one of the reasons for the popularity of CTO courses, live demonstrations, and conferences and, there are consequently many courses offered around the world to help new operators in the field. CTO PCI has emerged as a very effective procedure to help patients with CTOs, with very high success and low complications rates. It is however a very challenging procedure with multiple pitfalls along the way to success, both in specific cases, but also in the learning process. There are currently no single reference or "one-stop shop" for the operator who wants to learn a given technique that he or she may have seen performed live in a dedicated proctorship event, or in a live demonstration, or to even troubleshoot a problem encountered in daily CTO PCI practice. This will be the first handbook formatted for the busy interventional cardiologist. This book will become a "must have" for operators who are practicing

CTO PCI and who want a quick reference. However, it will also provide tips and tricks currently used in the field.

Evidence-Based Orthopedics is an up-to-date review of the best evidence for the diagnosis, management, and treatment of orthopedic conditions. Covering orthopedic surgery as well as pre- and post-operative complications, this comprehensive guide provides recommendations for implementing evidence-based practice in the clinical setting. Chapters written by leading clinicians and researchers in the field are supported by tables of evidence that summarize systematic reviews and randomized controlled trials. In areas where evidence is insufficient to recommend a practice, summaries of the available research are provided to assist in decision-making. This fully revised new edition reflects the most recent evidence using the approved evidence-based medicine (EBM) guidelines and methodology. The text now places greater emphasis on GRADE—a transparent framework for developing and presenting summaries of evidence—to allow readers to easily evaluate the quality of evidence and the strength of recommendations. The second edition offers a streamlined presentation and an improved standardized format emphasizing how evidence in each chapter directly affects clinical decisions. Incorporating a vast amount of new evidence, Evidence-Based Orthopedics: Features thoroughly revised and updated content, including a new chapter on pediatric orthopedics and new X-ray images Provides the evidence base for orthopedic surgery as well as pediatric orthopedics and orthopedic conditions requiring medical treatment Covers the different methods for most orthopedic surgical procedures, such as hip replacements, arthroscopy, and knee replacements Helps surgeons and orthopedic specialists achieve a uniform optimum standard through a condition-based approach Aligns with internationally accepted guidelines and best health economic principles Evidence-Based Orthopedics is an invaluable resource for orthopedic specialists, surgeons, trauma surgeons, trainees, and medical students.

The podocyte is a key cell that forms the last barrier of the kidney filtration unit. One of the most exciting developments in the field of nephrology in the last decade has been the elucidation of its biology and its role in the pathophysiology of inherited and acquired glomerular disease, termed podocytopathy. In this publication, world-renowned experts summarize the most recent findings and advances in the field: they describe the unique biological features and injury mechanisms of the podocyte, novel techniques used in their study, and diagnosis and potential therapeutic approaches to glomerular diseases. Due to its broad scope, this publication is of great value not only for clinical nephrologists and researchers, but also for students, residents, fellows, and postdocs.

This book provides the first contemporary assessment of area-based conservation and its implications for nature and society. Now covering 15 per cent of the land surface and a growing area of ocean, the creation of protected areas is one of the fastest conscious changes in land management in history. But this has come at a cost, including a backlash from human rights organisations about the social impacts of protected areas. At the same time, a range of new types of area-based conservation has emerged, based on indigenous people's territories, local community lands and a new designation of "other effective area-based conservation measures". This book provides a concise overview of the status and possible futures of area-based conservation. With many people calling for half the earth's land surface to remain in a natural condition, this book taps into the urgent debate about the feasibility of such an aim and the ways in which such land might be managed. It provides a timely contribution by people who have been at the centre of the debate for the last twenty years. Building on the authors' large personal knowledge, the book draws on global case studies where the authors have firsthand experience, including Yosemite National Park (USA), Blue Mountains National Park (Australia), Bwindi National Park (Uganda), Chingaza National Park (Colombia), Ustyart Plateau (Kazakhstan), Snowdonia National Park (Wales) and many more. This book is essential reading for students, academics and practitioners interested in conservation and its impact on society.

Bestselling author Thrity Umrigar's deeply felt first novel set in modern India, Bombay Time. At the wedding of a young man from a middle-class apartment building in Bombay, the men and women of this unique community gather together and look back on their youthful, idealistic selves and consider the changes the years have wrought. The lives of the Parsi men and women who grew up together in Wadi Baug are revealed in all their complicated humanity: Adi Patel's disintegration into alcoholism; Dosamai's gossiping tongue; and Soli Contractor's betrayal and heartbreak. And observing it all is Rusi Bilimoria, a disillusioned businessman who struggles to make sense of his life and hold together a fraying community.

This two-volume set (CCIS 1075 and CCIS 1076) constitutes the refereed proceedings of the Third International Conference on Advanced Informatics for Computing Research, ICAICR 2019, held in Shimla, India, in June 2019. The 78 revised full papers presented were carefully reviewed and selected from 382 submissions. The papers are organized in topical sections on computing methodologies; hardware; information systems; networks; software and its engineering.

Biological Diversity: Current Status and Conservation Policies

Biomarkers of Kidney Disease, Second Edition, focuses on the basic and clinical research of biomarkers in common kidney diseases, detailing the characteristics of an ideal biomarker. The latest techniques for biomarker detection, including metabolomics and proteomics are covered in the book. This comprehensive book details the latest advances made in the field of biomarker research and development in kidney diseases. The book is an ideal companion for those interested in biomarker research and development, proteomics and metabolomics, kidney diseases, statistical analysis, transplantation, and preeclampsia. New chapters include biomarkers of cardiovascular disease in patients with CKD, biomarkers of Polycystic Kidney Disease, and biomarkers and the role of nanomedicine. Explores both the practical and conceptual steps performed in the discovery of biomarkers in kidney disease Presents a comprehensive account of newer biomarker discover strategies, such as metabolomics and proteomics, all illustrated by clear examples Offers clear translational presentations by the top basic and clinical researchers in each specific renal disease, including AKI, transplantation, cancer, CKD, PKD, diabetic nephropathy, preeclampsia, and glomerular disease This book comprehensively compiles information on some of the major pests that afflict agricultural, horticultural and medicinal crops in particular as well as many polyphagous pests. Not only does this book deal with the pests of common globally produced crops it also addresses those of rarely dealt with crops such as seed spices, medicinal and aromatic plants. While the perspective of insect pests is largely Indian and South East Asian in context, the book does deal with globally problematic pests, particularly polyphagous ones. Not only will the readers be acquainted with the pests, their damaging potential and their life cycle but also with the latest methods of managements including ecofriendly measures being employed to keep pest populations at manageable levels. The 27 chapters in the book, are grouped into four sections primarily based on crop types, viz. pest of agricultural, horticultural and medicinal crops, and polyphagous pests, making the book easy to navigate. Each of the chapters is comprehensive and well illustrated and written by academicians who have dedicated their entire lives to the study of a particular crop-pest complex. The final chapter of this book provides an overview on the principles and processes of pest management.

This title includes a number of Open Access chapters. Nutrition is becoming ever more central to our understanding of metabolic processes. Nutritional biochemistry offers insight into the mechanisms by which diet influences human health and disease. This book focuses on five aspects of this complex field of study: nutritional genomics, clinical nutrition and biochemistry, vitamins and minerals, macronutrients and energy, and cell function and metabolism. Collected in this research compendium are recent studies within each of these topics. Each chapter contributes to a well-rounded and up-to-date picture of nutritional biochemistry. Appropriate for graduate-level and post-doctorate students, this book will stimulate further study into this important field of research.

This official directory is a database that includes more than 742,000 physician profiles, including their board certification status. This list also features nearly 20,000 physicians in foreign countries who are certified by American specialty boards.

The Critical Role of Area-Based Conservation

Select Proceedings of VCAS 2019

Third International Conference, ICAICR 2019, Shimla, India, June 15–16, 2019, Revised Selected Papers, Part I Climate Change and Cities

The Urban Climate Change Research Network's Second Assessment Report on Climate Change in Cities (ARC3.2) is the second in a series of global, science-based reports to examine climate risk, adaptation, and mitigation efforts in cities. The book explicitly seeks to explore the implications of changing climatic conditions on critical urban physical and social infrastructure sectors and intersectoral concerns. The primary purpose of ARC3.2 is to inform the development and implementation of effective urban climate change policies, leveraging ongoing and planned investments for populations in cities of developing, emerging, and developed countries. This volume, like its predecessor, will be invaluable for a range of audiences involved with climate change and cities: mayors, city officials and policymakers; urban planners; policymakers charged with developing climate change mitigation and adaptation programs; and a broad spectrum of researchers and advanced students in the environmental sciences.

This three-volume set constitutes the refereed proceedings of the Second International Conference on Recent Trends in Image Processing and Pattern Recognition (RTIP2R) 2018, held in Solapur, India, in December 2018. The 173 revised full papers presented were carefully reviewed and selected from 374 submissions. The papers are organized in topical sections in the three volumes. Part I: computer vision and pattern recognition; machine learning and applications; and image processing. Part II: healthcare and medical imaging; biometrics and applications. Part III: document image analysis; image analysis in agriculture; and data mining, information retrieval and applications.

Now in its revised and expanded second edition, this comprehensive, user-friendly text brings

the latest evidence to bear on the diagnosis and management of orthopedic trauma patients. Centering on clinical scenarios, each chapter is based on a specific case. Leaders in the field of orthopedic trauma provide their expert opinions on management strategies and techniques while using data as their guide. The book is divided into sections covering the spine, upper and lower extremities, hip and acetabulum, foot and ankle, polytrauma, infection and perioperative management. New chapters in this edition discuss elbow fracture dislocations, femoral neck fractures in the young, Lisfranc injuries and acute post-operative infection. Each chapter describes and summarizes the data in a consistent structure, but achieves this objective in a case-based format. Utilizing the latest literature, *Orthopedic Traumatology: An Evidence-Based Approach, Second Edition* will continue to serve as a guide for orthopedic residents and practicing physicians alike.

This is the second volume of the comprehensive, two-volume work on oxidative stress in lung diseases. Adopting a multidisciplinary approach, it demonstrates the cellular and molecular mechanisms associated with ROS (reactive oxygen species)-induced initiation and progression of a variety of lung diseases, such as COPD, emphysema, asthma, cystic fibrosis, occupational pulmonary diseases and pulmonary hypertension and discusses points for therapeutic intervention. The book also covers translational research and the latest research on prevention and therapeutics. Each chapter includes in-depth insights into the mechanisms associated with lung diseases and into identifying targets for drug development. Bridging the gap between fundamental and translational research, and examining applications in the biomedical and pharmaceutical industry, it is a thought-provoking read for basic and applied scientists engaged in biomedical research.

SOON TO BE A MAJOR MOTION PICTURE The stunning Booker Prize-winning novel from the author of *Amnesty* and *Selection Day* that critics have likened to Richard Wright's *Native Son*, *The White Tiger* follows a darkly comic Bangalore driver through the poverty and corruption of modern India's caste society. "This is the authentic voice of the Third World, like you've never heard it before" (John Burdett, *Bangkok 8*). The white tiger of this novel is Balram Halwai, a poor Indian villager whose great ambition leads him to the zenith of Indian business culture, the world of the Bangalore entrepreneur. On the occasion of the president of China's impending trip to Bangalore, Balram writes a letter to him describing his transformation and his experience as driver and servant to a wealthy Indian family, which he thinks exemplifies the contradictions and complications of Indian society. Recalling *The Death of Vishnu* and *Bangkok 8* in ambition, scope, *The White Tiger* is narrative genius with a mischief and personality all its own. Amoral, irreverent, deeply endearing, and utterly contemporary, this novel is an international publishing sensation—and a startling, provocative debut.

Offers the latest insights into the fundamental biology and pathogenesis of *A. fumigatus*. Provides a combined synopsis of both *A. fumigatus* and its diseases and therapies. Encompasses the most up-to-date knowledge to serve as a resource guide for the next decade of study on this organism and the many diseases it causes.

Covers the fundamental biology of *A. fumigatus* including specific features in genetics, biochemistry, and cell biology that can explain the virulence of this opportunistic pathogen. Discusses the wide range of clinical infection, plus the latest diagnostic and treatment strategies, in specific patient populations.

This book presents the latest advances in modeling and simulation for human factors research. It reports on cutting-edge simulators such as virtual and augmented reality, multisensory environments, and modeling and simulation methods used in various applications, including surgery, military operations, occupational safety, sports training, education, transportation and robotics. Based on two AHFE 2020 Virtual Conferences such as the AHFE 2020 Virtual Conference on Human Factors and Simulation and the AHFE 2020 Virtual Conference on Digital Human Modeling and Applied Optimization, held on July 16–20, 2020, the book serves as a timely reference guide for researchers and practitioners developing new modeling and simulation tools for analyzing or improving human performance. It also offers a unique resource for modelers seeking insights into human factors research and more feasible and reliable computational tools to foster advances in this exciting field.

This book presents high-quality peer-reviewed papers from the International Conference on Advanced Communication and Computational Technology (ICACCT) 2019 held at the National Institute of Technology, Kurukshetra, India. The contents are broadly divided into four parts: (i) Advanced Computing, (ii) Communication and Networking, (iii) VLSI and Embedded Systems, and (iv) Optimization Techniques. The major focus is on emerging computing technologies and their applications in the domain of communication and networking. The book will prove useful for engineers and researchers working on physical, data link and transport layers of communication protocols. Also, this will be useful for industry professionals interested in manufacturing of communication devices, modems, routers etc. with enhanced computational and data handling capacities.

This book sheds light on all aspects of earnings claims, including defining what an earnings claim really is, the origins of its regulation under franchise disclosure laws, how a franchisor should prepare an earnings claim, how a franchisee should use an earnings claim, how a franchisor can attack lawful and unlawful earnings claims, how a franchisor may defend against such attacks, and how the government franchise enforcement authorities, investigate unlawful earnings claim activity.

This book constitutes the refereed proceedings of the International Conference on Advances in Information Technology and Mobile Computing, AIM 2011, held at Nagpur, India, in April 2011. The 31 revised full papers presented together with 27 short papers and 34 poster papers were reviewed and selected from 313 submissions. The papers cover all current issues in theory, practices, and applications of Information Technology, Computer and Mobile Communication Technology and related topics.

The book focuses on soft computing and its applications to solve real-world problems in different domains, ranging from medicine and supply chain management, image processing and cryptanalysis. It includes high-quality papers presented at the International Conference on Soft Computing: Theories and Applications (SoCTA 2018), organized by Dr. B. R. Ambedkar National Institute of Technology, Jalandhar, Punjab. Offering significant insights into soft computing for teachers and researchers alike, the book inspires more researchers to work in the field of soft computing.
