begin language training while waiting to return to Fort Bragg for Phase II. The 3rd Bn, 1st SWTG (A) is responsible for all language training at the USAJFKSWCS. The Special Operations Language Training (SOLT) is primarily a performance-oriented language course. Students are trained in one of ten core languages with enduring regional application and must show proficiency in speaking, listening and reading. A student receives language training throughout the Pipeline. In Phase IV, students attend an 8 or 14 week language blitz depending upon the language they are slotted in. The general purpose of the course is to provide each student with the ability to communicate in a foreign language. For

The cornerstone of ELEMENTARY LINEAR ALGEBRA is the authors' clear, careful, and concise presentation of material--written so that students can fully understand how mathematics works. This program balances theory with examples, applications, and geometric intuition for a complete, step-by-step learning system. Featuring a new design that highlights the relevance of the mathematics and improves readability for students, the Seventh Edition also incorporates new conceptual Capstone exercises that reinforce multiple concepts in each section. Nanomaterials in Clinical Medicine: Case Studies in Nanomedicines focuses on the nanomaterials that can be formulated as drug delivery vehicles, such as liposomes, micelles, nanoemulsions and nanogels. Their physicochemical, morphological, thermo-dynamical and nanotoxicological properties are analyzed with respect to the design and development of drug delivery nanosystems for the encapsulation of an active pharmaceutical ingredient and its controlled release.

Each chapter covers basic properties, the nanosystem (e.g., liposomes), the added value in drug delivery and targeting, and future perspectives. Case studies and examples of how nanomaterials are being used in clinical medicine, including marketed liposomal medicines and medical utility and regimens are also included. Particular attention is given to new nanocarriers, such as elastic liposomes, lipid polymeric hybrid nanoparticles, organogel, nanofibers carbon nanomaterials, quantum dots and inorganic nanoparticles. This book is an important information source for those wanting to increase their understanding of what major nanomaterials are being used to create more effective

Further Developments in Fractals and Related Fields

This volume, following in the tradition of a similar 2010 publication by the same editors, is an outgrowth of an international conference, “Fractals and Related Fields II,” held in June 2011. The book provides readers with an overview of developments in the mathematical fields related to fractals, including original research contributions as well as surveys from many of the leading experts on modern

fractal theory and applications. The chapters cover fields related to fractals such as: *geometric measure theory *ergodic theory *dynamical systems *harmonic and functional analysis *number theory *probability theory Further Developments in Fractals and Related Fields is aimed at pure and applied mathematicians working in the above-mentioned areas as well as other researchers interested in discovering the fractal domain. Throughout the volume, readers will find interesting and motivating results as well as new avenues for further research. Analytical Studies in World Music assembles eleven

distinguished writers on music to discuss the detail and ingenuity with which sound is organized in musical traditions all over the world. Each chapter uses a recording, notation, diagrams, and imaginative description to bring the music to life as sound pattern and creative process, while an introductory chapter proposes ways to think about musical structures cross-culturally.
