all these things work? In this book, Sean Gerrish offers an engaging and accessible overview of the breakthroughs in artificial intelligence and machine learning that have made today's machines so smart. Gerrish outlines some of the key ideas that enable intelligent machines to perceive and interact with the world. He describes the software architecture that allows self-driving cars to stay on the road and to navigate crowded urban environments; the million-dollar Netflix competition

He explains how artificial neural networks enable computers to perceive the world—and to play Atari video games better than humans. He explains Watson's famous victory on Jeopardy, and he looks at how computers play games, describing AlphaGo and Deep Blue,

Computers have not yet mastered everything, however; Gerrish outlines the difficulties in creating intelligent agents that can successfully play video games like StarCraft that have evaded solution—at least for now. Gerrish weaves the stories behind these breakthroughs into the narrative, introducing readers to many of the researchers involved, and keeping technical details to a minimum. Science and

Rover 75 and MG ZT Workshop Manual

In the context of growing public interest in sustainability, Corporate Social Responsibility (CSR) has not brought about the expected improvement in terms of sustainable business. Self-regulation has been unable to provide appropriate answers for unsustainable business frameworks, despite empirical proof that sustainable behaviour is entirely in corporate enlightened self-interest. The lack of success of the soft law approach suggests that hard law regulation may be needed after all. This book discusses these options, alongside the issue of shareholder primacy and its externalities in corporate, social, and natural environment. To escape the "prisoner's dilemma" European

corporations and their global counterparts have found themselves in, help is needed in the form of EU hard law to advocate sustainability through mandatory rules. This book argues that the necessity of these laws is based on the first-mover's advantage of such corporate law approach towards sustainable development. In the current EU law environment, where codification of corporate law is sought for, forming and defining a general EU policy could not only help corporations embrace this self-enlightened behaviour but could also build the necessary "EU corporate citizenship" atmosphere. Considering the developments in the field of CSR as attempts to mitigate negative externalities resulting from inappropriate shareholder primacy use, the book is centred around a discussion of the shareholder primacy paradigm, its legal position and its (un)suitability for modern global business.

Going beyond solely legal analysis, juxtaposing legal principles and argumentation with economic theoretic approaches and, more importantly, real-life examples, this book is accessible to both professionals and academics working within the fields of business, economics, corporate governance and corporate law. This book highlights the sustainability aspects of additive manufacturing (AM) in two separate volumes. It describes the details of this technology and its implications on the entire product life cycle sustainability, as well as embedded carbon and the further research needed to move this technology towards sustainable, mainstream production. Sustainability is not new for any area of industry, including additive manufacturing, and there are currently a number of ongoing research projects, both in industry and in academic institutions, that are investigating

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a

Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.
