Quality is both a system and a state of mind. Quality Labs for Small Brewers will walk you step-by-step through the process of establishing and writing a quality program for your brewery. Building an effective quality program will empower staff to directly influence the consistent production of safe, quality beer from grain to glass. Learn how policies, procedures, and specifications can help ensure quality throughout the process. Discover how to build a foundation and culture of quality within your brewery—no matter what the size—by establishing protocols, corrective actions, and improvements. Brewers will see results through the application and implementation of prerequisite programs like Good Manufacturing Practices and food safety requirements. With these programs in place, dive beyond the numbers and build an understanding of a small brewer’s most important measurements and how to analyze them. These routines will help pinpoint any risks or areas of improvement and ensure that only quality beer reaches the customer, time after time.

For over a century, we've accepted the scientific consensus that cancer results from genetic disease due to chromosomal damage in cell nuclei. But what if cancer isn't a genetic disease after all? What if scientists are chasing a flawed paradigm, and cancer isn't a disease of damaged DNA but rather of defective metabolism as a result of mitochondrial dysfunction? What if that startling truth could revolutionize our understanding of other diseases as well--and show us a radical new path to optimal health?In this groundbreaking guide, the first of its kind, New York Times best-selling author and leading natural-health practitioner Joseph Mercola explains how nearly all disease is caused by defective metabolic processes. Then he reveals what's really causing your metabolism to go haywire: damage and dysfunction in the mitochondria, thousands of which are at work in nearly every cell in your body, generating 90 percent of the energy you need to stay alive and well. When mitochondria become damaged in large numbers, it is impossible to stay healthy.Dr. Mercola shows you that you can take control of your health simply by giving your body the proper fuel--and it's not what you've likely been led to believe. A ketogenic diet, very low in carbohydrates and high in healthy fats, is the way to optimize the biochemical pathways that suppress disease and support healing. And the benefits can be astonishing--not only in treating or preventing serious illness, but in boosting your brainpower, increasing your energy, helping you lose weight and keep it off, and much more.As you read this book, you'll learn in clear, rational terms how your body works at a molecular level. You'll finally understand the type of fuel it's designed to burn in the most efficient way possible. You'll find detailed guidelines for starting and sticking with a ketogenic eating plan. And you won't have to wait a decade or two for metabolic mitochondrial therapy to make its way into the mainstream. You can build a healthier body and brain at the cutting edge of this exciting new discipline, starting right now.

Providing detailed information on key areas of post-harvest technologies, this book is written with small-scale processors and entrepreneurs in food processing, who have no formal training in Food Science or Food Engineering, in mind. Uniquely, it will review the hands-on aspects of food processing from a largely non-academic viewpoint. It is written in non-technical language and covers everything from the basic science of why food is processed to a description of the main methods used. Coverage includes all current technologies that are used at the small-scale such as why food is processed, the historical development of food processing, background skills, heating and cooling in food processing, thermal processing basics and specialised calculations, drying food materials, statistical manufacturing control and sugar solution calculations in beverage making The target audience for this book is vastly under-served with appropriate information and the abundant use of photographs, showing the various concepts described in the text, makes this book appealing to those required to understand their food process operations.

This book examines both the primary ingredients and the processing technology for making candies. In the first section, the chemistry, structure, and physical properties of the primary ingredients are described, as are the characteristics of commercial ingredients. The second section explores the processing steps for each of the major sugar confectionery groups, while the third section covers chocolate and coatings. The manner in which ingredients function together to provide the desired texture and sensory properties of the product is analyzed, and chemical reactions and physical changes that occur during processing are examined. Trouble shooting and common problems are also discussed in each section. Designed as a complete reference and guide, Confectionery Science and Technology provides personnel in industry with solutions to the problems concerning the manufacture of high-quality confectionery products.

Excerpt from Weights Per United States Gallon and Weights Per Cubic Foot of Sugar Solutions In the laboratories of this Bureau where large numbers of density determinations on sirups and molasses are made, it was found expedi ent to expand the original table to intervals of one-tenth degree Brix, thereby simplifying the interpolations. The weights per gallon in vacuum were deleted and in their place the values for apparent specific gravity in air and the grams of sucrose per 100 ml of solution in vacuum were substituted. Science of solution is very complex and It needs for it's clarification, the help of many branches of science, namely, mathematical physics, thermodynamics, statistical mechanics, electro-statistics and hydronamics .Solute-Solute and Solute-Solvent interactions play an important role in the solution chemistry of solutes, it would be interesting to measure densities and viscosities of aqueous sugar solutions in presence of alkali halide ions. The objective of applying an osmotic treatment, is to produce products that may be stored without having to use severe heat treatment, freezing, or aseptic packaging, the treatments may offer economic advantages. It becomes interesting if a non-electrolyte is presents in electrolyte solutions. Therefore, in the present work ternary system such as electrolyte + non electrolyte + water has been undertaken to know the structure modification of solvent by these sugars gets enhanced or subdued in the presence of an ion.
