Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

The notion of a flipped classroom draws on such concepts as active learning, student engagement, hybrid course design, and course podcasting. The value of a flipped class is in the repurposing of class time into a workshop where students can inquire about lecture content, test their skills in applying knowledge, and interact with one another in hands-on activities. The Handbook of Research on Active Learning and the Flipped Classroom Model in the Digital Age highlights current research on the latest trends in education with an emphasis on the technologies being used to meet learning objectives. Focusing on teaching strategies, learner engagement,

Reform of American education is largely motivated by concerns about our economic competitiveness and American's standard of living. Yet, few if any of the public school reform agendas incorporate economic principles or research findings. Improving America's Schools explores how education and economic research can help produce, in the words of Harvard's Dale W. Jorgenson, "a unified framework for future education

reform." This book presents the perspectives of noted experts, including Eric A. Hanushek, author of Making Schools Work, on creating incentives for improved school and student performance; Under Secretary of Education Marshall S. Smith on the Clinton Administration's reform program; and Rebecca Maynard, University of Pennsylvania, on the education of the disadvantaged. This volume explores these areas The importance of schooling to labor market success. The prospects for combining school-based management with teacher incentives to gain the best of both approaches. The potential of recent innovations in student achievement testing, including new "value-added" indicators. The economic factors involved in maintaining an adequate stock of effective teachers. The volume also explores why, despite similar standards of living, France, the Netherlands, England, Scotland, and the United States produce different levels of education achievement. Improving America's Schools informs the current debate over school reform with a fresh perspective, examples, and data. This readable volume will be of interest to policymakers, researchers, educators, and education administrators as

well as economists and employers--it is also readily accessible to concerned parents and the larger community.
