**A visual guide to the history of tanks, Tank tells the full history of tanks through stunning photography and informative text. From the early Mark Is of World War I to the T-34 of World War II to the cutting-edge M1 Abrams of today, Tank showcases the most famous (or infamous) armored fighting vehicles in history. Packed full of tanks, armored vehicles, personnel carriers, and anti-tank weaponry, Tank combines comprehensive photographic spreads with in-depth histories of key manufacturers and specially commissioned visual tours of the most iconic examples of their kind. The featured vehicles are placed in their wider context, along with with tactical and technological improvements, and the impact of the tank on the evolution of battlefield and military strategy. Tank charts the evolution of the tank over the past century, covering over 450 tanks and military vehicles from all over the world. Look through the history of tanks and explore the form and function of a weapon that changed history. Learn the different vehicles' weight, size, country of origin, and time of use through in-depth profiles. An essential visual history, Tank provides a complete and exciting overview to the iconic vehicles that changed history.**

The AMX 13 was originally designed in the immediate aftermath of the Second World War. It represents French ambitions for national resurgence and withdrawal from wartime dependence on American military technology.

Being a light tank far sighted departure from conventional tank design and it found a ready export market as well as being a critical part in the French Army arsenal. Its basic hull design lent itself to the development of a vast list of variants.

French designer and indeed reinvented, the AMX13 and enabled it to claim to be one of the most successful armored vehicle programs of the postwar period. It proved its worth in numerous small wars worldwide in the service of many countries.

This, the work on the AMX13 in English, examines in detail the technical industrial and tactical story of this remarkably successful armored fighting vehicle. The authoritative text is backed by an impressive selection of images

The purpose of the 10th US North American Mine Ventilation Symposium in Anchorage 2004 was to bring together practitioners involved in the planning and operation of underground ventilation systems, to provide a forum for debate and exchange of ideas,

and to share information on the advances which have been made and consider problems which remain in the broad field of mine ventilation. The Mine Ventilation Symposium series has always been a premier forum for ventilation experts, practitioners,

educators, students, regulators and manufacturers from around the world to exchange knowledge, ideas and opinions. This volume features over sixty selected technical papers from fifteen countries around the world including topics such as mine fires and

explosions,case studies, diesel in underground mines, face ventilation, ventilation systems design, strata gas and control, ventilation and control systems, modeling and software development, dust generation, transport and control.
