Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€"which includes all primary caregiversâ€"are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

The health, development, and learning of many young children living in disadvantage areas are at serious risk. Access to education has improved under the United Nations Millennium Development Goals, and there are now programs in low- and middle-income countries that are aimed at improving instruction and learning. The research and evaluation on the effectiveness of such programs show there are significant challenges, but also some successes. This issue features presentations of leading international scientists, representatives from key governmental and non-governmental organizations, and others working with programs in the developing world and disadvantaged

populations. The presentations describe the goals, existing challenges, and potential approaches to providing evidence-based programs to young children in rural, remote, and poverty stricken areas. Topics covered include: the state of early childhood in low and middle income nations, programs that have shown some success, and innovative research approaches that have been often considered unfeasible in these contexts. This is the 158th volume in this Jossey-Bass series New Directions for Child and Adolescent Development. Its mission is to provide scientific and scholarly presentations on cutting edge issues and concepts in this subject area. Each volume focuses on a specific new direction or research topic and is edited by experts from that field.

The long-awaited new edition of NAEYC's book Developmentally Appropriate Practice in Early Childhood Programs is here, fully revised and updated! Since the first edition in 1987, it has been an essential resource for the early childhood education field. Early childhood educators have a professional responsibility to plan and implement intentional, developmentally appropriate learning experiences that promote the social and emotional development, physical development and health, cognitive development, and general learning competencies of each child served. But what is developmentally appropriate practice (DAP)? DAP is a framework designed to promote young children's optimal learning and development through a strengths-based approach to joyful, engaged learning. As educators make decisions to support each child's learning and development, they consider what they know about (1) commonality in children's development and learning, (2) each child as an individual (within the context of their family and community), and (3) everything discernible about the social and cultural contexts for each child, each educator, and the program as a whole. This latest edition of the book is fully revised to underscore the critical role social and cultural contexts play in child development and learning, including new research about implicit bias and teachers' own context and consideration of advances in neuroscience. Educators implement developmentally appropriate practice by recognizing the many assets all young children bring to the early learning program as individuals and as members of families and communities. They also develop an awareness of their own context. Building on each child's strengths, educators design and implement learning settings to help each child achieve their full potential across all domains of development and across all content areas.

Ditch the behavioral charts and start teaching for universal success Disinterested students and behavioral problems are all too common in schools. Yet results show that behavior charts and other reward-and-punishment systems simply don't work. Teachers are burning out and students are failing. But what can be done? The secret lies in a unique combination of behavioral science, neuropsychology, and group dynamics. When teachers get the classroom experience right, students want to succeed and achieve to their potential, while behavioral problems largely vanish. For decades, it has been widely accepted that children have motivating needs including the need to avoid pain, a need for autonomy, and the need to belong. The authors harness these motivations into a method of interactions that increases cooperation, and in which children want to succeed and help others to thrive. Packed with real classroom examples and practical guidance for using the methods, this guide gives teachers the tools to transform even difficult classrooms. Start teaching for universal success in classroom management and academic accomplishments.

Many practical books for music educators who work with special needs students focus on students' disabilities, rather than on the inclusive classroom more generally. In Including Everyone: Creating Music Classrooms Where All Children Learn, veteran teacher and pedagogue Judith Jellison offers a new approach that identifies broader principles of inclusive music instruction writ large. As she demonstrates in this aptly-titled book, the perceived impediments to successfully including the wide diversity of children in schools in meaningful music instruction often stem not from insurmountable obstacles but from a lack of imagination. How do teachers and parents create diverse musical communities in which all children develop skills, deepen understanding, and cultivate independence in a culture of accomplishment and joy? Including Everyone equips music teachers with five principles of effective instruction for mixed special needs / traditional settings that are applicable in both classroom and rehearsal rooms alike. These five guidelines lay out Jellison's argument for a new way to teach music that shifts attention away from thinking of children in terms of symptoms. The effective teacher, argues Jellison, will strive to offer a curriculum that will not only allow the child with a disability to be more successful, but will also apply to and improve instruction for typically developing students. In this compelling new book, Judith Jellison illustrates what it takes to imagine, create, and realize possibilities for all children in ways that inspire parents, teachers, and the children themselves to take part in collaborative music making. Her book helps readers recognize how this most central component of human culture is one that allows everyone to participate, learn, and grow. Jellison is a leader in her field, and the wealth of knowledge she makes available in this book is extensive and valuable. It should aid her peers and inspire a new generation of student teachers.
