“[Bubbling] over with the joy of scientific discovery. . . . Great fun for anyone looking to revive their childhood dinosaur obsessions.” –Publishers Weekly, starred review
What if we woke up one morning all of the dinosaur bones in the world were gone? How would we know these iconic animals had a 165-million year history on earth, and had adapted to all land-based environments from pole to pole? What clues would be left to discern not only their presence, but also to learn about their sex lives, raising of young, social lives, combat, and who ate who? What would it take for us to know how fast dinosaurs moved, whether they lived underground, climbed trees, or went for a swim? Welcome to the world of ichnology, the study of traces and trace fossils—such as tracks, trails, burrows, nests, toothmarks, and other vestiges of behavior—and how through these remarkable clues, we can explore and intuit the rich and complicated lives of dinosaurs. With a unique, detective-like approach, interpreting the forensic clues of these long-extinct animals that leave a much richer legacy than bones, Martin brings the wild world of the Mesozoic to life for the twenty-first-century reader.

This encyclopedia is a guide to the world's best-known dinosaurs, together with many lesser-known species from the Triassic, Jurassic and Cretaceous periods. Each dinosaur is described and portrayed in watercolour, a fact file box details the dimensions of each creature, when it lived, and names the finder.

For over a century, dinosaurs have been thought of as plodding, dim-witted giant lizards too awkward and ill equipped to survive wholesale environmental change. Bakker offers startling new evidence destined to forever alter the perception of the much-maligned monsters, depicting them as never before imagined: hot-blooded, amazingly agile, & surprisingly intelligent.

It's the first day of school! Harry is nervous because he isn't sure what to expect. Triceratops is even more nervous, especially when Harry must leave the dinosaurs in the coatroom. But soon Harry sees another boy who is the most nervous of all. He clings to his toy bulldozer and won't talk to anyone in the class. Harry wonders what he can do. Perhaps the new boy will talk to dinosaurs. . . .

"A world made by the Eight Creators on which to play out their games of passion and power, Paradise is a sprawling, diverse, often brutal place. Men and women live on Paradise as do dogs, cats, ferrets, goats, and horses. But Dinosaurs predominate: wildlife, monsters, beasts of burden--and of war"--Amazon.com.

Dinosaurs and All that Rubbish

Lewis Page's cover story in Prospect on the military's most useless and expensive hardware set off a firestorm of controversy, back pedalling, and accusations. In this irreverent and provocative book, he gives us the full story: how British soldiers are sent off to war with some of the worst guns in the trade, how the MOD keeps financing useless toys (at huge expense to taxpayers), and how decisions seem to be made with an eye, above all, for the interests of British Aerospace. He shows how politicians and the top brass are hopelessly entrenched in yesterday's wars and pouring their talents and energies into making sure that money is wasted right, left and centre. Lions, Donkeys and Dinosaurs does for the military what Not on the Label did for supermarkets - it takes us behind the scenes and exposes the real ingredients whipped up in the name of defence.

100-Year Cover-up Revealed: We Lived With Dinosaurs makes our past coexistence with dinosaurs effortlessly apparent with a wide variety of proof ranging from artistic to documentary to scientific. Although it automatically invalidates evolution by proving coexistence, this book takes the extra step of examining and destroying, with logic and science, every major assumption and claim made by evolutionists, including the absurd notion that dinosaurs and humans missed each other by 65 million years. The sub-topic that runs throughout the entire book is that, for the past century, evolutionists have been brainwashing us with bogus claims while actively and passively covering up evidence showing that humans coexisted with dinosaurs and that evolution is basically a hoax. 100-Year Cover-up Revealed: We Lived With Dinosaurs not only proves the reality of coexistence and the fallacy of evolution, but also shows how the suppression of these facts has polluted our laboratories, classrooms, and media. Finally, this book highlights the scientific and educational implications of its conclusions and offers an intelligent alternative to evolution.
