Each pair of units is supported by the Teachers Guide. The Teachers Guide fully supports the programme giving all the guidance you need to help you pupils work through the two pupil books. In the Teachers Guide there are suggestions for homework and independent study. The teachings, style and impact of the Qur'an have always been matters of controversy, among both Muslims and non-Muslims. But in a modern context of intercultural sensitivity, what the Qur'an says and means are perhaps more urgent questions than ever before. This major new book by one of the world's finest Islamic scholars responds to that urgency. Building on his earlier groundbreaking work, the author challenges misinterpretations of particular Qur'anic verses from whatever quarter. He addresses the infamous 'sword' verse, frequently cited as a justification for jihad. He also questions the 'tribute' verse, associated with the Muslim state subjugating Jews and Christians; and the idea of Paradise in the Qur'an, often viewed by the West as emphasising merely physical pleasures, or used by Islamic fighters as their just reward for holy war. The author argues that wrenching the verses out of the context of the whole has led to dangerous ideologies being built on isolated phrases which have then assumed afterlives of their own. This nuanced, holistic reading has vital interfaith ramifications. "Compact first second edition is a concise course which thoroughly prepares B2- level students for all four papers of the revised Cambridge English : First, also known as First Certificate in English (FCE). 10 units provide 50-60 hours of core material to maximise students' performance"-- Back cover.

"The American Colonies" provides a detailed and richly illustrated overview of the trials of Europeans in the New World. From the earliest primitive encampments on the Atlantic seacoast to the settled societies of the later colonial period, this book vividly describes the disastrous first years, the strained reliance on native peoples, the horrors of the African slave trade, and deteriorating relations with England, which stand in marked contrast to the hope, strength, resilience, and determination with which colonialists carved a nation out of the North American wilderness. Challenging review questions encourage meaningful reflection and historical analysis. Maps, tests, answer key, and extensive bibliography are included.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions

Resource discovery is the process of identifying and locating existing resources that have a particular property. A resource corresponds to an information source such as a data repository or database management system (e. g. , a query form or a textual search engine), a link between resources (an index or hyperlink), or a service such as an application or a tool.

Resources are characterized by core information including a name, a description of its input and its output (parameters or format), its address, and various additional properties expressed as metadata.

Resources are organized with respect to metadata that characterize their content (for data sources), their semantics (in terms of ontological

classes and relationships), their characteristics (syntactical properties), their performance (with metrics and benchmarks), their quality (curation, reliability, trust), etc. Resource discovery systems allow the expression of queries to identify and - cate resources that implement speci?c tasks. Machine-based resource discovery relies on crawling, clustering, and classifying resources discovered on the Web automatically. The First Workshop on Resource Discovery (RED) took place on November 25, 2008 in Linz, Austria. It was organized jointly with the 10th International Conference on Information Integration and Web-Based Applications and S- vices and its proceedings were published by ACM. The second edition of the workshop was co-located with the 35th International Conference on Very Large Data Bases (VLDB) in the beautiful city of Lyon, France. Nine papers were selected for presentation at this second edition. Areas of researchaddressedby these papers include the problem of resource characterization and classi?cation, resourcecomposition,andontology-driven discovery. Shortly after accepting the flat earth as a model for the world, I decided to revisit the Book of the Courses of the Heavenly Luminaries to see if my new understanding would somehow mirror what Enoch

was sharing as the motion of the sun and moon. As I began to read chapters 71-82, I found to my utter amazement that I was able to grasp those passages. I knew then that the vision that the angel Uriel had shown to Enoch could only be deciphered if one were to imagine Enoch's description of the revolution of the sun and the moon. As seen from above the flat circular plane of the earth as described by Isaiah; and that Enoch must have been taken up to perhaps where Polaris is, centered directly above the North Pole, and while looking down at the backdrop of the earth, was instructed on the motions of both the sun and moon. Without such conception, it is in my opinion impossible to apply these descriptions to the model of the earth as a spherical planet.
