An Insider's Guide to Becoming a Better Diver

Building on his first book, "SCUBA: A Practical Guide for the New Diver", James Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance. Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.

In the backcountry of the Florida Keys, you can see and hear trouble coming for miles in any direction. If you're paying attention. Jesse McDermitt lives in the backcountry and very little happens near him that he's not aware of. During a quiet moment, he watches a slow-moving shrimp trawler as it serenely cruises by, far out on the Gulf, at the edge of the three-mile limit. The tranquility of the moment is shattered when the trawler is demolished in an enormous explosion. What caused the explosion and why was a woman from Jesse's past on board? To find the answers to those questions and more, Jesse and friends will work from Miami to Key West, then across the water to Fort Myers. When the bad guys hit too close to home, Jesse retaliates. Furiously.

Coral branches rarely wear a wristwatch. That was Jesse McDermitt's first thought when he found a partially denuded human arm, teeming with crab, lobster, and fish life, during his morning ocean swim. The discovery of a drifting mega-yacht the following day while fishing the Gulf Stream, causes quite a stir among the many alphabet agencies of the federal government, not to mention one shaggy canine. A severed leg and two whole bodies are discovered aboard. The find links the disappearance of the yacht's owners to the arm Jesse found twenty miles to the north, near his home in the back country of the Florida Keys. Black marketers from Eastern

Europe have set up a base of operations too close to Jesse for comfort. The rescue of the yacht-owners takes on national security importance, but it's even more important to one of Jesse's closest friends. High speed boats and planes race across the Gulf Stream, causing the Cuban Air Force to become nervous. Will Jesse and his crew reach the victims in time?

In *Swim Speed Secrets*, 4-time Olympian, gold medalist, and triathlon world champion Sheila Taormina reveals the swim technique used by the world's fastest swimmers. Over the course of 4 Olympic Games and throughout her career as a champion triathlete, Taormina refined her exceptional technique as a student of the sport, studying the world's best swimmers using underwater photographs and video analysis. From Johnny Weissmuller to Michael Phelps, the world's fastest swimmers share two common elements: high stroke rate and a high-elbow underwater pull. Many swimmers and triathletes neglect the underwater pull, distracted by stroke count or perfecting less critical details like body position, streamlining, and roll. *Swim Speed Secrets* focuses on producing power—the most crucial element of swimming—to help triathletes and swimmers overhaul their swim stroke and find the speed that's been eluding them. With a commonsense approach that comes from decades of practice and years of hands-on coaching experience, Taormina shows swimmers the transition to faster swimming. *Swim Speed Secrets* includes: The best drills to cultivate a more sensitive feel for the water Dryland and strength building exercises to develop arm position and upper body musculature Crisp photos of Olympic swimmers and variations in their high-elbow underwater pull Clear descriptions of the key moments of the underwater stroke Tips that helped her perform at a world-class level for two decades Sheila Taormina's *Swim Speed Secrets* brings the underwater back where it belongs—to a powerful underwater stroke. With this approach, triathletes and swimmers can stop struggling, survive, and break through to new levels of speed and confidence in the water.

This first-person narrative about an archaeological discovery is rewriting the story of human evolution. A story of dedication and determination by a controversial scientist, this is Lee Berger's own take on finding *Homo naledi*, an all-new species in the human family tree and one of the greatest discoveries of the 21st century. In 2013, Berger, a National Geographic Explorer in Residence, caught wind of a cache of bones in a hard-to-reach underground cave in South Africa. He put out a call across the world for petite collaborators—men and women small and adventurous enough to be able to squeeze through 8-inch tunnels to reach a sunless cave 40 feet underground. With this team of "underground astronauts," Berger made the discovery of a lifetime: hundreds of prehistoric bones, including entire skeletons of at least 15 individuals, all perhaps two million years old. Their features combined those of known prehomonids like Lucy, the famous *Australopithecus*, with those more human than anything ever before seen in prehistoric remains. Berger's team had discovered an all new species, and they called it *Homo naledi*. The cave quickly proved to be the richest prehomonid site ever discovered, full of implications that shake the very foundation of how we define what makes us human. Did this species come before, during, or after the emergence of *Homo sapiens* on our evolutionary tree? How did the cave come to contain nothing but the remains of these individuals? Did they bury their dead? If so, they must have had a level of self-knowledge, including an awareness of death. And yet they possessed the very characteristics used to define what makes us human. Did an equally advanced species inhabit Earth with us long before us? Berger does not hesitate to address all these questions. Berger is a charming and controversial figure, and his colleagues question his interpretation of this and other finds. But in these pages, this charismatic and visionary paleoanthropologist counters their arguments and tells his personal story: a rich and readable narrative about science, exploration, and what it means to be human.

SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks.

SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to

take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

Richard Clow, a new face in the Civil War and American Frontier! Rough Enough documents ten years of true life struggle by Richard Clow as he leaves Boston in 1864 to fight in the Civil War at the tender age of 17 ½. His letters home tell how he is bloodied in battle with the 56th Massachusetts Infantry during the final battles of Petersburg and Lee's retreat to Appomattox Court House. His family conflicts and the inability to readjust to civilian life leads him to reenlist in the 13th Infantry on the Montana and Dakota frontier where he battles Sitting Bull's Sioux and the harsh environment of the northern plains. As First Sergeant at Fort Buford, D.T., in 1869, Clow again struggles with constant exposure to isolation, death, battles with Indians and the elements. He begins to show symptoms of the frontier disorder known as "Soldier's Heart". Leaving the military and embarking on civilian life, Clow sees a chain of death thwart his plans for marriage and a family. In despair, he returns to the wilds of the Dakotas and settles in Deadwood where his diary documents original wording of old mining and Spanish songs. When he strikes it "rich" in his "Golden Seal" mine in 1876 he befriends the influential William Story. This friendship leads him to the love of his life and a new and successful life on the American Frontier.

Questions Every MBA Needs to Answer: Redefining Risk and Reward for a Life of Purpose

In Megan Gebhart's senior year of college, she started a project in which she talked to someone she didn't know over a cup of coffee once a week for a year. Her project was so successful, she traveled for 14 months having conversations with cultural leaders, business people, a first-grader, fellow travelers and many others before returning to San Francisco and consolidating her interviews into a book.

This book is written to show how our lives can be radically changed in One Day. Do you believe your life could change in one day? What are you believing for? We know that in God's timing things can change in an instant, but we will look at those who woke up normally and at the end of the day their lives were totally transformed. There are many of us who are living in the hope that our lives would change for the better. We have been praying, fasting and believing for change but as time passes by we do not see any change. When God interrupts your Day you must be willing to surrender to His will. You must be willing to commit to Him and His assignment. God will use your talents and abilities, but He will use you even if you have no talents at all. You must be willing to allow God to use what little or much you have. It's not how much or how little you have, it is how committed you are! You and God can do anything! This Naked Mind has ignited a movement across the country, helping thousands of people forever change their relationship with alcohol. Many people question whether drinking has become too big a part of their lives, and worry that it may even be affecting their health. But, they resist change because they fear losing the pleasure and stress-relief associated with alcohol, and assume giving it up will involve deprivation and misery. This Naked Mind offers a new, positive solution. Here, Annie Grace clearly presents the

psychological and neurological components of alcohol use based on the latest science, and reveals the cultural, social, and industry factors that support alcohol dependence in all of us. Packed with surprising insight into the reasons we drink, this book will open your eyes to the startling role of alcohol in our culture, and how the stigma of alcoholism and recovery keeps people from getting the help they need. With Annie's own extraordinary and candid personal story at its heart, this book is a must-read for anyone who drinks. This Naked Mind will give you freedom from alcohol. It removes the psychological dependence so that you will not crave alcohol, allowing you to easily drink less (or stop drinking). With clarity, humor, and a unique blend of science and storytelling, This Naked Mind will open the door to the life you have been waiting for. "You have given me my life back." —Katy F., Albuquerque, New Mexico "This is an inspiring and groundbreaking must-read.
