

Dolomites Projects Catalogo Della Mostra Rovereto 12 Febbraio 1 Maggio 2011 Ediz Illustrata

This book contains case histories intended to show how societies and landscapes interact. The range of interest stretches from the small groups of the earliest Neolithic, through Bronze and Iron Age civilizations, to modern nation states. The coexistence is, of its very nature reciprocal, resulting in changes in both society and landscape. In some instances the adaptations may be judged successful in terms of human needs, but failure is common and even the successful cases are ephemeral when judged in the light of history. Comparisons and contrasts between the various cases can be made at various scales from global through inter-regional, to regional and smaller scales. At the global scale, all societies deal with major problems of climate change, sea-level rise, and with ubiquitous problems such as soil erosion and landscape degradation. Inter-regional differences bring out significant detail with one region suffering from drought when another suffers from widespread flooding. For example, desertification in North Africa and the Near East contrasts with the temperate countries of southern Europe where the landscape-effects of deforestation are more obvious. And China and Japan offer an interesting comparison from the standpoint of geological hazards to society - large, unpredictable and massively erosive rivers in the former case, volcanoes and accompanying earthquakes in the latter. Within the North African region localized climatic changes led to abandonment of some desertified areas with successful adjustments in others, with the ultimate evolution into the formative civilization of Egypt, the "Gift of the Nile". At a smaller scale it is instructive to compare the city-states of the Medieval and early Renaissance times that developed in the watershed of a single river, the Arno in Tuscany, and how Pisa, Siena and Florence developed and reached their golden periods at different times depending on their location with regard to proximity to the sea, to the main trunk of the river, or in the adjacent hills. Also noteworthy is the role of technology in opening up opportunities for a society. Consider the Netherlands and how its history has been formed by the technical problem of a populous society dealing with too much water, as an inexorably rising sea threatens their landscape; or the case of communities in Colorado trying to deal with too little water for farmers and domestic users, by bringing their supply over a mountain chain. These and others cases included in the book, provide evidence of the successes, near misses and outright failures that mark our ongoing relationship with landscape throughout the history of Homo sapiens. The hope is that compilations such as this will lead to a better understanding of the issue and provide us with knowledge valuable in planning a sustainable modus vivendi between humanity and landscape for as long as possible. Audience: The book will interest geomorphologists, geologists, geographers, archaeologists, anthropologists, ecologists, environmentalists, historians and others in the academic world. Practically, planners and managers interested in landscape/environmental conditions will find interest in these pages, and more generally the increasingly large body of opinion in the general public, with concerns about Planet Earth, will find much to inform their opinions. Extra material: The color plate section is available at <http://extras.springer.com>

Ritual landscapes and borders are recurring themes running through Professor Kalle Sognnes' long research career. This anthology contains 13 articles written by colleagues from his broad network in appreciation of his many contributions to the field of rock art research. The contributions discuss many different kinds of borders: those between landscapes, cultures, traditions, settlements, power relations, symbolism, research traditions, theory and methods. We are grateful to the Department of Historical studies, NTNU; the Faculty of Humanities; NTNU, The Royal Norwegian Society of Sciences and Letters and The Norwegian Archaeological Society (Norsk arkeologisk selskap) for funding this volume that will add new knowledge to the field and will be of importance to researchers and students of rock art in Scandinavia and abroad.

An analysis of trends in landscape design and architecture in Italy, France and Great Britain throughout the past 500 years. 384 pp., 300 line drawings, 100 photographs and 16 pages of color illus.

This open access book offers a selection of research papers and case studies presented at the 3rd international conference "Smart and Sustainable Planning for Cities and Regions", held in December 2019 in Bolzano, Italy, and explores the concept of smart and sustainable planning, including top contributions from academics, policy makers, consultants and other professionals. Innovation processes such as co-design and co-creation help establish collaborations that engage with stakeholders in a trustworthy and transparent environment while answering the need for new value propositions. The importance of an integrated, holistic approach is widely recognized to break down silos in local government, in particular, when aimed at achieving a better integration of climate-energy planning. Despite the ongoing urbanization and polarization processes, new synergies between urban and rural areas emerge, linking development opportunities to intrinsic cultural, natural and man-made landscape values. The increasing availability of big, real-time urban data and advanced ICT facilitates frequent assessment and continuous monitoring of performances, while allowing fine-tuning as needed. This is valid not only for individual projects but also on a wider scale. In addition, and circling back to the first point, (big) urban data and ICT can be of enormous help in facilitating engagement and co-creation by raising awareness and by providing insight into the local consequences of specific plans. However, this potential is not yet fully exploited in standard processes and procedures, which can therefore lack the agility and flexibility to keep up with the pulse of the city and dynamics of society. The book provides a multi-disciplinary outlook based on

experience to orient the reader in the giant galaxy of smart and sustainable planning, support the transposition of research into practice, scale up visionary approaches and design groundbreaking planning policies and tools.

Plenitude of Power Under the Visconti and the Sforza 1329-1535

This volume brings together state-of-the-art reviews of the non-biostratigraphic and biostratigraphic data that are used to define and correlate Permian time intervals. It includes analyses of Permian radio-isotopic ages, magnetostratigraphy, isotope-based stratigraphy and timescale-relevant biostratigraphy. It is the first book devoted to this subject and represents the cutting edge of Permian time-scale research.

This book provides a substantial contribution to understanding the international legal framework for the protection and conservation of cultural heritage. It offers a range of perspectives from well-regarded contributors from different parts of the world on the impact of law in heritage conservation. Through a holistic approach, the authors bring the reader into dialogue around the intersection between the humanities and legal sciences, demonstrating the reciprocity of interaction in programs and projects to enhance cultural heritage in the world. This edited volume compiles a selection of interesting reflections on the role of cultural diplomacy to address intolerances that often govern international relations, causing damage to human and cultural heritage. The main purpose of this collection of essays is to analyse the different cultural paradigms that intervene in the management of heritage, and to advocate for improvements in international laws and conventions to enable better cultural policies of individual nations for the protection of human rights. The editors submit that it is only through open dialogue between the humanities and jurisprudence that the international community will be able to better protect and value sovereignty, and promote cultural heritage for the development of a better world. This collection is relevant to scholars working in areas relating to law, management and policies of cultural heritage conservation and protection.

The book presents the proceedings of Rob/Arch 2016, the third international conference on robotic fabrication in architecture, art, and design. The work contains a wide range of contemporary topics, from methodologies for incorporating dynamic material feedback into existing fabrication processes, to novel interfaces for robotic programming, to new processes for large-scale automated construction. The latent argument behind this research is that the term 'file-to-factory' must not be a reductive celebration of expediency but instead a perpetual challenge to increase the quality of feedback between design, matter, and making.

Lonely Planet Rome is your passport to the most relevant, up-to-date advice on what to see and skip, and what hidden discoveries await you. Channel your inner gladiator at the Colosseum, spend hours wandering the vast Vatican Museums, or toss a coin and make a wish at Trevi Fountain; all with your trusted travel companion.

Robotic Fabrication in Architecture, Art and Design 2016

This insightful volumes the use of imitation and the modern cult of originality through a consideration of the disparate fates of two Venetian painters – the canonised master Titian and his artistic heir, the little-known Padovanino.

"Olivo Barbieri is back with a new photographic project on the world's greatest waterfalls: from Victoria Falls (on the border between Zambia and Zimbabwe) to Iguazu (between Argentina and Brasil), from Khone Papeng (Laos/Cambodia) to Niagara Falls (Usa/Canada), The Waterfall Project presents a selection of massive water systems with their imposing, incessant energy flows, which – as usual – Barbieri portrays exclusively from an aerial perspective."--BOOK JACKET.

The latest spectacular celebration from Architizer of the most inspiring contemporary architecture from around the globe. The Architizer A+Awards represent 2021's best architecture and products, celebrated by a diverse group of influencers within and outside the architectural community. Entries are judged by more than 400 luminaries from ?elds as diverse as fashion, publishing, product design, real-estate development, and technology, and voted on by the public, culminating in a collection of the world's finest buildings. Each year, winners are honored in this fully illustrated compendium, and

on Architizer.com, the largest online architecture community on the planet. Featuring select A+Award winners, this is the definitive guide to the year's best buildings and spaces.

The European Union and the single currency have given Europe more stability than it has known in the past thousand years, yet Europe seems to be in perpetual crisis about its global role. The many European empires are now reduced to a multiplicity of ethnicities, traditions, and civilizations. Europe will never be One, but to survive as a union it will have to become a federation of "islands" both distinct and connected. Though drawing on philosophers of Europe's past, Cacciari calls not to resist Europe's sunset but to embrace it. Europe will have to open up to the possibility that in few generations new exiles and an unpredictable cultural hybridism will again change all we know about the European legacy. Though scarcely alive in today's politics, the political unity of Europe is still a necessity, however impossible it seems to achieve.

Earliest Italy

This book traces the last century of life of the Republic of Venice. It aims to show why the "Serenissima", unlike large countries such as France or England, was not on the way to becoming a modern nation. Until its end, the city of Venice never took the shape of a real national capital, but remained the dominant centre linking wide-ranging and diverse territories around the Adriatic. The particularism, or rather polycentrism, of its state apparatus is the key to understanding its limitations, as well as the legacy left in Venice's vast domains, reaching from Corfu to Lombardy. In the 18th century the Republic was weak compared to the great European states. Its institutions and leadership had been frozen for two centuries and there was no political reform, although Enlightenment culture diffused widely over the century. On the economic level, however, there was little sign of "decay": merchant traffic continued to prosper and there were a number of new developments in the manufacturing sphere.

Betr. u. a. Werke von Hans Aeschbacher und Hermann Haller. - Ergänzt und ersetzt Nr. 714 der BBG 1995.

The idea of the book "Science and Conservation for Museum Collections" was born as a result of the experience made by CNR-ISTEC (Faenza) in the implementation of a course for Syrian restorers at the National Museum in Damascus. The book takes into consideration archaeological artefacts made out of the most common materials, like stones (both natural and artificial), mosaics, ceramics, glass, metals, wood and textiles, together with less diffuse artefacts and materials, like clay tablets, goldsmith artefacts, icons, leather and skin objects, bones and ivory, coral and mother of pearl. Each type of material is treated from four different points of view: composition and processing technology; alteration and degradation causes and mechanisms; procedures for conservative intervention; case studies and/or examples of conservation and restoration. Due to the high number of materials and to the great difference between their conservation problems, all the subjects are treated in a schematic, but precise and complete way. The book is mainly addressed to students, young restorers, conservators and conservation scientists all around the world. But the book can be usefully read by expert professionals too, because nobody can know everything and the experts often need to learn something of the materials not included in their specific knowledge. Twenty-two experts in very different fields of activity contributed with their experience for obtaining a good product. All they are Italian experts, or working in Italy, so that the book can be seen as an exemplification on how the conservation problem of Cultural Heritage is received and tackled in Italy.

Geomorphological Mapping: a professional handbook of techniques and applications is a new book targeted at academics and practitioners who use, or wish to utilise, geomorphological mapping within their work. Synthesising for the first time an historical perspective to geomorphological mapping, field based and digital tools and techniques for mapping and an extensive array of case studies from academics and professionals active in the area. Those active in geomorphology, engineering geology, reinsurance, Environmental Impact Assessors, and allied areas, will find the text of immense value. Growth of interest in geomorphological mapping and currently no texts comprehensively cover this topic Extensive case studies that will appeal to professionals, academics and students (with extensive use of diagrams, potentially colour plates) Brings together material on digital mapping (GIS and remote sensing), cartography and data sources with a focus on modern technologies (including GIS, remote sensing and digital terrain analysis) Provides readers with summaries of current advances in methodological/technical aspects Accompanied by electronic resources for digital mapping

Ritual Landscapes and Borders Within Rock Art Research

The Mediatization of War and Peace

During the First World War, mass media achieved an enormous and continuously growing importance in all belligerent countries. Newspaper, illustrated magazines, comics, pamphlets, and instant books, fictional works, photography, and the new-born "theater of imagery", the cinema, were crucial in order to create a heroic vision of the events, to mobilize and maintain the consensus on the war. But their role was pivotal also in creating the image of the war's end and finally, together with a widespread, new literary genre, the war memoirs, to shape the collective memory of the conflict for the next generations. Even before November 1918, the media raised high expectations for a multifaceted peace: a new global order, the beginning of a peaceful era, the occasion for a regenerating apocalypse. Likewise, in the following decades, particularly war literature and cinema were pivotal to reverse the icon of the Great War as an epic crusade and a glorious chapter of the national history and to create the hegemonic image of a senseless carnage. The Mediatization of War and Peace focalizes on the central role played by mass media in the tortuous transition to the post-war period as well as on the profound disenchantment generated by their prophecies.

There is considerable academic and practical interest in stone and stone buildings, as exemplified by the wide range of high-quality and innovative work being conducted in the pursuit of the effective preservation and restoration of historic buildings. This is reflected in the numerous publications on stone and stone buildings that regularly find their way into the public domain. Not least amongst these are a number of Geological Society Special Publications, which have appeared in recent years. This current volume seeks to bring to the attention of the various professionals in the field (geologists, architects, engineers, conservators and conservation scientists) recent work centred on the characterization and performance of this important resource and its use in historic buildings. The volume has wider relevance, including to those interested in the heritage of stone.

Accompanying CD-ROM contains ... "isotopic and multi-method marble database."--CD-ROM label.

In the context of La Biennale di Venezia, the European Cultural Centre presents TIME-SPACE-EXISTENCE in three of its prestigious Palazzo's in Venice. The exhibition shows an extensive combination of established architects and architects whose practice is less known, as a cross section of what can be seen as architecture today. Their common ground

is the architect's personal expression upon their reflection what architecture should and can be. This results in architecture that visually appears to be very different. Conforming to the aim of the ECC, the exhibition features architecture presented in a broad variety of artistic media. Since the more than 150 participating architects originate from very diverse cultures representing over 50 countries and are also of different age, the works are highlighted from unusual, very personal points of view. In addition the catalogue also shows the exhibition VENICE DESIGN 2016 which was hosted by the ECC in Palazzo Michiel.

20 chapters by qualified and distinguished scholars offer a new and original view of the State of Milan from the mid 14th to the late 17th century, with themes ranging from society to politics, music to literature, the history of art to law, the church to the economy.

Imagine mathematics, imagine with the help of mathematics, imagine new worlds, new geometries, new forms. Imagine building mathematical models that make it possible to manage our world better, imagine combining music, art, poetry, literature, architecture and cinema with mathematics. Imagine the unpredictable and sometimes counterintuitive applications of mathematics in all areas of human endeavour. Imagination and mathematics, imagination and culture, culture and mathematics. This sixth volume in the series begins with a homage to the architect Zaha Hadid, who died on March 31st, 2016, a few weeks before the opening of a large exhibition of her works in Palazzo Franchetti in Venice, where all the Mathematics and Culture conferences have taken place in the last years. A large section of the book is dedicated to literature, narrative and mathematics including a contribution from Simon Singh. It discusses the role of media in mathematics, including museums of science, journals and movies. Mathematics and applications, including blood circulation and preventing crimes using earthquakes, is also addressed, while a section on mathematics and art examines the role of math in design. A large selection presents photos of mathematicians and mathematical objects by Vincent Moncorge. Discussing all topics in a way that is rigorous but captivating, detailed but full of evocations, it offers an all-embracing look at the world of mathematics and culture.

This book aims to synthesize more than 600,000 years of Italian prehistory, beginning with the Lower Paleolithic and ending with the last hunter-gatherers of the early Holocene. The author treats such issues as the development of social structure, the rise and fall of specific cultural traditions, climatic change, modifications of the landscape, fauna and flora, and environmental adaptation and exploitation and includes detailed descriptions of the most important sites.

This book sheds new light on the role of the military in Italian society and culture during war and peacetime by bringing together a whole host of contributors across the interdisciplinary spectrum of Italian Studies. Divided into five thematic units, this volume examines the continuous and multifaceted impact of the military on modern and contemporary Italy. The Italian context offers a particularly fertile ground for studying the cultural impact of the military because the institution was used not only for defensive/offensive purposes, but also to unify the country and to spread ideas of socio-cultural and technological development across its diverse population.

Authority above the law - once the preserve of pope and emperor - was claimed by the ruling Milanese dynasties, the Visconti and Sforza. The book traces the developments in Milan over the course of two centuries, showing how the Visconti and Sforza regimes seized, exploited, and

finally relinquished absolute power.

This landmark publication celebrates one of the most exciting periods in European art. It brings together 93 paintings and 85 drawings from the Royal Collection and accompanies an exhibition of international importance. The earliest paintings in the book date from the beginning of the sixteenth century and include Giovanni Bellini's Portrait of a Young Man, Lorenzo Costa's Portrait of a Lady with a Lapdog, and the Portrait of a Man, which has previously been attributed to Raphael. From the end of the seventeenth century is the series of twelve paintings on copper by Luca Giordano, illustrating the story of Cupid and Psyche. In between are works by Andrea del Sarto, Bronzino, Caravaggio, Correggio, Titian, Giulio Romano, Jacopa Bassano, Lorenzo Lotto, Palma Vecchio, Veronese, Parmigianino, Tintoretto, Annibale Carracci, Domenichino, Domenico Fetti, Orazio and Artemisia Gentileschi, Guido Reni, and Guercino; ranging in scale from small devotional paintings to large altarpieces, and from religious narratives to mythological subjects and portraiture. The sixteenth and seventeenth centuries also saw some of the richest and most dynamic developments in Italian drawing, and this book includes some of the finest drawings by many of the greatest artists of the period - from the achievements of the High Renaissance (including works by Leonardo, Raphael, Michelangelo, Andrea del Sarto and Parmigianino), through the later Renaissance in northern Italy (Barocci, Tintoretto, the Carracci), to the Baroque in Rome (Domenichino, Bernini, Maratti), Bologna (Reni, Guercino) and beyond. Several of the drawings are published under new attributions, and all the entries reflect recent developments in this field. Scholarly thinking on a number of the paintings is also reassessed, in some cases for the first time since John Shearman's *The Early Italian Paintings in the Collection of Her Majesty The Queen* (1983) and Michael Levey's *The Later Italian Pictures in the Collection of Her Majesty The Queen* (2nd edn 1991). Fresh insights are drawn from the latest research, and from recent cleaning and conservation, which has transformed critical opinion on a number of the paintings, in particular *The Calling of Saints Peter and Andrew*, a painting that is now firmly attributed to Caravaggio himself, rather than a follower. There are also further fascinating works by artists rarely encountered in British collections, such as Polidoro da Caravaggio, Francesco Salviati, Federico Zuccaro, Cristofano Allori and Guido Cagnacci.

This study analyzes the ways in which a variety of cultural manifestations were the necessary preconditions for (religious) policy and power in the Rome of Urban VIII (1623-1644). Precisely their interaction created what we now call 'Baroque Culture'.

Systematics: A Course of Lectures is designed for use in an advanced undergraduate or introductory graduate level course in systematics and is meant to present core systematic concepts and literature. The book covers topics such as the history of systematic thinking and fundamental concepts in the field including species concepts, homology, and hypothesis testing.

Analytical methods are covered in detail with chapters devoted to sequence alignment, optimality criteria, and methods such as distance, parsimony, maximum likelihood and Bayesian approaches. Trees and tree searching, consensus and super-tree methods, support measures, and other relevant topics are each covered in their own sections. The work is not a bleeding-edge statement or in-depth review of the entirety of systematics, but covers the basics as broadly as could be handled in a one semester course. Most chapters are designed to be a single 1.5 hour class, with those on parsimony, likelihood, posterior probability, and tree searching two classes (2 x 1.5 hours).

This volume offers a comprehensive review of the chemical, biological and hydromorphological quality of the Danube. The first part examines the chemical pollution of surface waters, focusing on organic compounds (with special emphasis given to EU WFD priority substances and Danube River Basin specific pollutants), heavy metals and nutrients. Attention is also given to pollution of groundwater and drinking water resources by hazardous substances and to radioactivity in the Danube. The second part highlights the biology and hydromorphology of the Danube. It focuses on benthic macroinvertebrates, phytobenthos, macrophytes, fish, phytoplankton as well as microbiology, with chapters dedicated to gaps and uncertainties in the ecological status assessment and to invasive alien species. Further chapters dealing with the hydromorphology, sediment management and isotope hydrology complete the overall picture of the status of the Danube.

The fourth edition of the biennial architecture exhibition 'TIME SPACE EXISTENCE' presents a wide selection of works from architects, photographers, sculptors and universities from all over the world. In addition, projects realized in cooperation with institutions and museums. The participating architects and artists come from diverse cultural backgrounds and different career stages, i.e. established architects next to professionals whose works might be less known. What they have in common is their dedication to architecture in the broadest sense of their profession. The exhibition shows a vast spectrum of presentations (models, concepts, research outcomes, thoughts, dreams and ideas), placing classical architectural installations in dialogue with surprising artistic elements. Exhibition: 16th Architecture Biennial, Palazzo Mora, Palazzo Bembo and Giardini Marinaressa Venice, Italy (26.05. - 25.11.2018).

A dazzling tribute to Italy's greatest "hidden" regional cuisine by the author of the bestselling and groundbreaking cookbook *Polpo*. Returning to the city of his gastronomic inspiration, Norman Russell immerses himself in the authentic recipes and culinary traditions of Venice and the Veneto in one hundred recipes showcasing the simple but exquisite flavors of *La Serenissima*. He documents one magical year learning and fine-tuning the specialties and everyday comfort foods of *la cucina veneziana* in a rustic kitchen in a neighborhood far from the tourist crowds -- where washing hangs across the narrow streets and some houses still rely on a communal well for water. Russell lovingly reproduces true Venetian recipes with authentic ingredients very different from the globalized tourist fare in the city's restaurants. The book is structured by season highlighting the ever-changing produce available in Venice's buzzing market stalls throughout the year. Included are Venetian favorites such as asparagus with Parmesan and anchovy butter, butternut risotto, arancini, rabbit cacciatore, warm duck salad with walnuts and beets, scallops with lemon and peppermint, and warm octopus salad. Russell also affords a rare and intimate glimpse into Venice: its hidden architectural gems, secret places, embedded history, the color and energy of daily life and the characters that make this city so enchanting.
