The McGraw-Hill Computer Handbook

This is a collection of invited papers from the 1975 International Symposium on Multiple-valued Logic. Also included is an extensive bibliography of works in the field of multiple-valued logic prior to 1975 - this supplements and extends an earlier bibliography of works prior to 1965, by Nicholas Rescher in his book *Many-Valued Logic*, McGraw-Hill, 1969. There are a number of possible reasons for interest in the present volume. First, the range of various uses covered in this collection of papers may be taken as indicative of a

breadth which occurs in the field of multiple-valued logic as a whole - the papers here can do no more than cover a small sample: question-answering systems, analysis of computer hazards, algebraic structures relating to multiple-valued logic, algebra of computer programs, fuzzy sets. Second, a large part of the interest in such uses and applications has occurred in the last twenty, even ten years. It would be too much to expect this to be reflected in Rescher's 1969 book. Third, in the 1970's a series of annual symposia have been held on multiple-valued logic, which have brought much of this into a sharp focus. \* The 1971 and 1972 symposia were held at the SUNY at Buffalo, the 1973 symposium at the University of Toronto, and the 1974 symposium at West Virginia University. Papers from these symposia are included in the bibliography which may be found in an appendix of this book.
