If there is one thing  
Ford enthusiasts have  
learned over the

years, deciphering which Ford parts work with which Ford engines is a far more difficult task than with many other engine families. Will Cleveland heads fit on my Windsor block? Can I build a stroker motor with factory parts? Can I gain compression by

using older-model cylinder heads, and will it restrict flow? Is there a difference between Windsor 2-barrel and 4-barrel heads? These are just a few examples of common questions Ford fans have.

These and many other questions are examined in this all-

Ford's 351  
Cleveland was  
designed to be a  
'mid-sized' V-8  
engine, and was  
developed for  
higher  
performance use  
upon its launch  
in late 1969 for  
the 1970 models.  
This unique  
design proved

itself under the hood of Ford's Mustang, among other high performance cars. The Cleveland engine addressed the major shortcoming of the Windsor engines that preceded it, namely cylinder

head air flow.

The Windsor engines just couldn't be built at the time to compete effectively with the strongest GM and Mopar small blocks offerings, and the Cleveland engine was the answer to that

problem.

Unfortunately,  
the Cleveland  
engine was  
introduced at  
the end of  
Detroit's muscle  
car era, and the  
engine, in pure  
Cleveland form,  
was very short  
lived. It did  
continue on as a

excitement.

Renewed  
enthusiasm in  
this engine has  
spawned an  
influx of top-

Basic dimensions and specifications of each engine, along with tips for identifying both design differences and casting number(s) are shown. In addition to this, each engine's strong

points and areas of concern are described in detail. Written with high performance in mind, both traditional power tricks and methods to increase efficiency of these specific engines are
