In White Collar Fictions Christopher P. Wilson explores how turn-of-the-century literary representations of "white collar" Americans--the "middle" social strata H.L. Mencken dismissed as boobus Americanus--were actually part and parcel of a new social class coming to terms with its own power, authority, and contradictions. An innovative study that integrates literary analysis with social-history research, the book reexamines the life and work of Sherwood Anderson and Sinclair Lewis--as well as such nearly forgotten authors as O. Henry, Edna Ferber, Robert Grant, and Elmer Rice. Between 1885 and 1925 America underwent fundamental social changes. The family business faded with the rise of the modern corporation; mid-level clerical work grew rapidly; the "white collar" ranks--sales clerks, accountants, lawyers, advertisers, "middle managers, and professionals--expanded between capital and labor. During this same period, Wilson shows, white collar characters took on greater prominence within American literature and popular culture.

Magazines like the Saturday Evening Post idolized "average Americans," while writers such as Sherwood Anderson and Sinclair Lewis produced portraits of "middle America" in Winesburg, Ohio and Babbitt. By investigating the material experience and social vocabularies within white collar life itself, Wilson uncovers the ways in which writers helped create a new cultural vocabulary--"Babbittry," the "little people," the "Average American"--That served to redefine power, authority, and commonality in American society.

Providing an excellent example of why folk artists can be appreciated as carriers of knowledge, even if they are unaware of it, this book could change the ways we understand and appreciate American folk arts. Connecting a sharecropper from Georgia in the Southern United States to a protector and healer in Touba, Senegal, West Africa, the holy city of Mouridism, and the final resting place of its founder, Shaikh Ahmadou Bamba Mbàcke, it makes an interesting link while examining the cultural aspects of two very different and yet similar paths of life. Historians and art historians alike will find this investigation of African American art and folk culture both interesting and insightful. Not only does this book trace the characteristics of art through the African Diaspora, but it also traces Islam through those same diasporic transportations of colonial exploration and slavery.

Above all don't use the word good as though it meant something in evolutionary science. The Hard Problem is a tour de force, exploring fundamental questions of how we experience the world, as well as telling the moving story of a young woman whose struggle for understanding her own life and the lives of others leads her to question the deeply held beliefs of those around her. Hilary, a young psychology researcher at the Krohl Institute for Brain Science, is nursing a private sorrow and a troubling question. She and other researchers at the institute are grappling with what science calls the "hard problem"—if there is nothing but matter, what is consciousness? What Hilary discovers puts her fundamentally at odds with her colleagues, who include her first mentor and one-time lover, Spike; her boss, Leo; and the billionaire founder of the institute, Jerry. Hilary needs a miracle, and she is prepared to pray for one.

"Sheer pleasure. . . . Wonderfully entertaining."—Chicago Sun-Times Acclaimed by Norman Mailer more than twenty years ago as "possibly the only American writer of genius," William S. Burroughs has produced a body of work unique in our time. In these scintillating essays, he writes wittily and wisely about himself, his interests, his influences, his friends and foes. He offers candid and not always flattering assessments of such diverse writers as Ernest Hemingway, F. Scott Fitzgerald, Joseph Conrad, Graham Greene, Jack Kerouac, Allen Ginsberg, Samuel Beckett, and Marcel Proust. He ruminates on science and the often dubious paths into which it seems intent on leading us, whether into outer or inner space. He reviews his reviewers, explains his famous "cut-up" method, and discusses the role coincidence has played in his life and work. As satirist and parodist, William Burroughs has no peer, as these varied works, written over three decades, amply reveal.

*Introduction to Data Science: Data Analysis and Prediction Algorithms with R introduces concepts and skills that can help you tackle real-world data analysis challenges. It covers concepts from probability, statistical inference, linear regression, and machine learning. It also helps you develop skills such as R programming, data wrangling, data visualization, predictive algorithm building, file organization with UNIX/Linux shell, version control with Git and GitHub, and reproducible document preparation. This book is a textbook for a first course in data science. No previous knowledge of R is necessary, although some experience with programming may be helpful. The book is divided into six parts: R, data visualization, statistics with R, data wrangling, machine learning, and productivity tools. Each part has several chapters meant to be presented as one lecture. The author uses motivating case studies that realistically mimic a data scientist's experience. He starts by asking specific questions and answers these through data analysis so concepts are learned as a means to answering the questions. Examples of the case studies included are: US murder rates by state, self-reported student heights, trends in world health and economics, the impact of vaccines on infectious disease rates, the financial crisis of 2007-2008, election forecasting, building a baseball team, image processing of hand-written digits, and movie recommendation systems. The statistical concepts used to answer the case study questions are only briefly introduced, so complementing with a probability and statistics textbook is highly recommended for in-depth understanding of these concepts. If you read and understand the chapters and complete the exercises, you will be prepared to learn the more advanced concepts and skills needed to become an expert.*
