This book focuses on the basic aspects of dental stem cells (DSCs) as well as their clinical applications in tissue engineering and regenerative medicine. It opens with a discussion of classification, protocols, and properties of DSCs and proceeds to explore DSCs within the contexts of cryopreservation; epigenetics; pulp, periodontal, tooth, bone, and corneal stroma regeneration; neuronal properties, mesenchymal stem cells and biomaterials; and as sources of hepatocytes for liver disease treatment. The fifteen expertly authored chapters comprehensively examine possible applications of DSCs and provide invaluable insights into mechanisms of growth and differentiation. Dental Stem Cells: Regenerative Potential draws from a wealth of international perspectives and is an essential addition to the developing literature on dental stem cells. This installment of Springer's Stem Cell Biology and Regenerative Medicine series is indispensable for

biomedical researchers interested in bioengineering, dentistry, tissue engineering, regenerative medicine, cell biology and oncology. Essential Clinical Oral Biology is an accessible guide to oral biology, introducing the scientific knowledge necessary to succeed in clinical practice. Student-friendly layout with clinical photographs throughout Each chapter has clearly defined key topics and learning objectives Covers the essentials: what you need to know and why Companion website featuring interactive MCQs, teaching presentations and downloadable images The forerunner to this book - Ryder, Mir & Freeman's 'An Aid to the MRCP Short Cases' - rapidly established itself as a classic and has sold over 30,000 copies. The new Progressive Assessment of Clinical Examination Skills (PACES) has replaced the old short case exam and, as a result, the authors have revised, reworked and extended their highly successful text so that it continues to address the study needs of candidates. This new revision aid is now presented in two volumes: An Aid to the MRCP PACES Volume 1: Stations 1, 3 and 5 An Aid to the MRCP PACES Volume 2: Stations 2 and 4 This Volume covers Station 1 'Respiratory and Abdominal Systems', Station 3 'Cardiovascular and Neurological Systems' and Station 5 'Skin, Locomoter, Eyes and the Endocrine System'. The 200 cases have been written in accordance with the new examining and marking schemes used for the exam. They provide an invaluable training and revision aid for all candidates.

MCQs in Dentistry

This book provides clinicians with state of the art information on the use of zygomatic implants to restore function and improve quality of life. International experts come together to showcase important innovations and advances in techniques that will assist in the optimization of outcomes. Readers will find information on indications, biomechanics, the role of imaging, digital treatment planning, and all aspects of implant placement. Individual chapters are devoted to different procedures, including the extramaxillary surgical technique, extended sinus lift with retained bone window, the anatomy-guided approach, the quad zygoma technique, and static and dynamic guided surgery. The use of zygomatic implants specifically in oncology patients is also given detailed consideration. Today, the zygomatic approach offers many advantages for patients with severe maxillary resorption, in whom grafting was in the past unavoidable. In providing an up-to-date global perspective on the zygoma concept, this book will be an invaluable source of guidance for practitioners at all levels of experience.
