Pete the Cat builds a playground in New York Times bestselling artist James Dean's Pete the Cat: Construction Destruction. When Pete sees that the playground is in bad shape, he gets a totally groovy idea—make a new playground! Pete calls in construction workers and cement mixers, backhoes and dump trucks to build the coolest playground ever. In the end, Pete learns that to make something special, you have to dream big. Complete with over 30 stickers!

The global construction sector is infamous for high levels

of injuries, accidents and fatalities, and poor health and well-being of its workforce. While this record appears in both developed and developing countries, the situation is worse in developing countries, where major spending on infrastructure development is expected. There is an urgent need to improve construction health and safety (H&S) in developing countries. The improvement calls for the development of context-specific solutions underpinned by research into challenges and related solutions. This edited volume advances the current understanding of construction H&S in developing countries by revealing context-specific issues and challenges that have hitherto

not been well explored in the literature, and applying emergent H&S management approaches and practices in developing countries. Coverage includes countries from the regions of sub-Saharan Africa, Latin America, Asia and Europe. This book, which is the first compendium of research into construction H&S issues in developing countries, adds considerable insight into the field and presents innovative solutions to help address poor H&S in construction in developing nations. It is a must read for all construction professionals, researchers and practitioners interested in construction and occupational H&S, safety management, engineering management and development

This classic guide by a master animator and cartoonist and long time Disney artist is now available for the first time since its original publication in 1946. Author Ken Hultgren instructs by example in a guide that's suitable for beginners and advanced students alike. The comprehensive range of instruction covers features and expressions, animals, foreshortening, perspective, lettering, caricature, animation, and various other aspects of cartooning. All subjects include step-by-step guides, several examples, and helpful hints and suggestions. Blank pages allow lots of room for drawing practice.

This book explores new territory at the interface between semantics and pragmatics, reassessing a number of linguistic phenomena in the light of recent advances in pragmatic theory. It presents stimulating insights by experts in linguistics and philosophy, including Kent Bach, Philippe de Brabanter, Max Kölbel and François Recanati. The authors begin by reassessing the definition of four theoretical concepts: saturation, free pragmatic

enrichment, completion and expansion. They go on to confront (sub)disciplines that have addressed similar issues but that have not necessarily been in close contact, and then turn to questions related to reported speech, modality, indirect requests and prosody. Chapters investigate lexical pragmatics and (cognitive) lexical semantics and other interactions involving experimental pragmatics, construction grammar, clinical linguistics, and the distinction between mental and linguistic content. The authors bridge the gap between different disciplines, subdisciplines and methodologies, supporting cross-fertilization of ideas and indicating the empirical studies

Building Information Modeling (BIM) refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility, including its design, construction and operation. In order to exploit BIM methods to their full potential, a fundamental grasp of their key principles and applications is essential. Accordingly, this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices. The book 's content is divided into six parts: Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings, as well as methods for process modeling. Next, Part II covers the important aspect of the interoperability of BIM software products and describes in detail the

Part III is dedicated to the philosophy, organization and technical implementation of BIM-based collaboration, and discusses the impact on legal issues including construction contracts. In turn, Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility, including the use of BIM for design coordination, structural analysis, energy analysis, code compliance checking, quantity take-off, prefabrication, progress monitoring and operation. In Part V, a number of design and construction companies report on the current state of BIM adoption in connection with actual BIM projects, and discuss the approach pursued for the shift toward

An introduction to geometry without measurements. What impact has the evolution and proliferation of surveillance in the digital age had on fundamental rights? This important collection offers a critical assessment from a European, transatlantic and global perspective. It tracks four key dimensions: digitalisation, privatisation, de-politicisation/de-legalisation and globalisation. It sets out the legal and policy demands that recourse to 'the digital' has imposed. Exploring the question across key sectors, it looks at privatisation through the prism of those demands on the private sector to co-operate with the state's security needs. It goes on to assess de-politicisation and de-legalisation, reflecting the fact that surveillance is often conducted in secret. Finally, it looks at applicable law in a

During the past twenty-five years, researchers have made impressive advances in pinpointing effective learning strategies (namely, activities the learner engages in during learning that are intended to improve learning). In *Learning as a Generative Activity: Eight Learning Strategies that Promote Understanding*, Logan Fiorella and Richard E. Mayer share eight evidence-based learning strategies that promote understanding: summarizing, mapping, drawing, imagining, self-testing, self-explaining, teaching, and enacting. Each chapter describes and exemplifies a learning strategy, examines the underlying cognitive theory, evaluates strategy effectiveness by analyzing the latest research, pinpoints boundary conditions, and explores

practical implications and future directions. Each learning strategy targets generative learning, in which learners actively make sense out of the material so they can apply their learning to new situations. This concise, accessible introduction to learning strategies will benefit students, researchers, and practitioners in educational psychology, as well as general readers interested in the important twenty-first-century skill of regulating one's own learning.

Given the highly coercive and heavily surveilled dynamics of the present moment, when the tremendous pressures exerted by capital on contemporary life produces an aggressively normative “official reality,” the question of the construction of other possible worlds is crucial and perhaps more urgent than ever. This collection brings together different perspectives from the fields of philosophy, aesthetics, and art to discuss the mechanisms through which possible worlds are thought, constructed, and instantiated, forcefully seeking to overcome the contemporary moment's deficit of conceptualizing alternate realities—its apparent fear of imagining possible new and compelling futures—to

begin the arduous task of producing the political dynamics necessary for actual construction. Implicit in this dynamic between the imaginary and the possible is the question of how thinking intertwines with both rationality and the inherited contingencies and structures of the world. With no ascertainable ground on which to build, with no confidence in any given that could guarantee our labors, how do we even envisage the construction site(s) of possible worlds, and with what kind of diagrams, tools, and languages can we bring them into being?

“ Women Make Noise is a wonderful collection of essays, taking the reader from the days of Sassy country and Western women carving out a place in a horrendously sexist fledgeling music industry, all the way up to the Riot Grrrl movement of the 90s and beyond. Each chapter is written with such boundless enthusiasm for the subject matter that it ’ ll keep you enthralled until you drift slowly out of your comfort zone without even realising it. Read the book cover to cover, have your eyes opened, discover your next favourite band and perhaps think about the role of Women in music a little differently from now on. ” – Intuition, review by Owen Chambers “ Fascinating,

diverse and, most importantly, inspiring – the title alone is as much a rallying cry as a joyous statement of the truth. ” – Zoe Street Howe, author of Typical Girls? The Story of The Slits, and other music titles “ It ’ s exhilarating to learn about different generations of female musicians from such diverse, strong voices. ” – Kathleen Hanna, American singer, musician, artist, feminist activist, pioneer of the feminist punk riot grrrrl movement “ A very important and timely contribution to the debates about “ women in rock ” . All-girl bands have too often been written off as novelties, and this exciting book sheds new light on an under-researched area. ” – Lucy O ’ Brien, author of She Bop: The
