From the creator of the popular website Ask a Manager and New York's work-advice columnist comes a witty, practical guide to 200 difficult professional conversations—featuring all-new advice! There's a reason Alison Green has been called “the Dear Abby of the work world.” Ten years as a workplace-advice columnist have taught her that people avoid awkward conversations in the office because they simply don't know what to say. Thankfully, Green does—and in this incredibly helpful book, she tackles the tough discussions you may need to have during your career. You'll learn what to say when • coworkers push their work on you—then take credit for it • you accidentally trash-talk someone in an email then hit “reply all” • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems unhappy with your work • your cubemate's loud speakerphone is making you homicidal • you got drunk at the holiday party Praise for Ask a Manager “A must-read for anyone who works . . . [Alison Green's] advice boils down to the idea that you should be professional (even when others are not) and that communicating in a straightforward manner with candor and kindness will get you far, no matter where you work.”—Booklist (starred review) “The author's friendly, warm, no-nonsense writing is a pleasure to read, and her advice can be widely applied to relationships in all areas of readers' lives. Ideal for anyone new to the job market or new to management, or anyone hoping to improve their work experience.”—Library Journal (starred review) “I am a huge fan of Alison Green's Ask a Manager column. This book is even better. It teaches us how to deal with many of the most vexing big and little problems in our workplaces—and to do so with grace, confidence, and a sense of humor.”—Robert Sutton, Stanford professor and author of The No Asshole Rule and The Asshole Survival Guide “Ask a Manager is the ultimate playbook for navigating the traditional workforce in a diplomatic but firm way.”—Erin Lowry, author of Broke

Two professors look at the mystique around universities and the consequences of “credentialism.” For decades, we have promoted the idea that a university degree is a passport to future career success. Ken Coates and Bill Morrison argue that the over-promotion of higher education and university degrees is actually undermining the lives of young people, saddling them with enormous debts, and costing governments huge amounts of money. As the young flock to universities in ever-increasing numbers, fewer of them than ever find the elusive “good jobs” that they are pursuing. In fact, many of those jobs no longer exist. We are in the midst of a youth employment crisis that is global in proportion, and we are facing serious misunderstandings about the unfolding career prospects for young adults entering a world of rapid technological change. Ken Coates and Bill Morrison explore the impacts of universities turning out graduates with the wrong skills, and the consequences of vanishing job opportunities.

A collection of personal essays from men who wrestle with what it means to be a father in academia today. Organized in three sections, the stories of the contributors depict not merely a balancing act of parenting, teaching, and writing, but also the revelatory collision and occasional fusion of competing identities. Essays in the first section, "Fathers in Theory, Fathers in Praxis," focus on challenges related to merging work and parenting. The authors contemplate to what degree we engage our children in the academy, while also allowing them to grow independently, recognizing the challenge of keeping the roles of parent and teacher distinct. The second section, "Family Made," explores fatherhood against the grain and includes narratives of single dads,fathers raising children with disabilities, biracial families, and other "non-traditional" parenting situations. "Forging New Fatherhoods," the third section, articulates the strategies created by men to "balance diapers and a doctorate" or to reconcile fatherhood with professional ambition. The contributors' reflections reveal how fatherhood is instrumental to their successes and failures in the workplace, and demonstrate that the relationship between fatherhood and academia is a rich and legitimate subject for study.

William Taylor, 29, a third generation Washington, D.C. resident stands out for a number of reasons. For one, he is an African American man who taught math at an elementary school for many years. Taylor excelled in the role, so much so that he now coaches his fellow math teachers at Aiton Elementary School, which is located in a high-poverty Washington D.C. neighborhood. He has also been profiled in the national news—specifically in "The Atlantic"—where it was noted that, in a typical school year, 60 percent of Taylor's students start their first day in his class doing math below grade level, but by the end of the year, 90 percent of his students are performing above grade level. For his exemplary work Taylor earned \$131,000 in 2013—another factor that makes him stand out as a public school teacher. In 2013, after seven straight years of extraordinary performance reviews Taylor received a base salary of \$96,000, a \$25,000 bonus for being a highly effective teacher in a high-poverty school, and a \$10,000 award for outstanding teaching and dedication to his work. With the money he's saved since he started teaching, Taylor recently bought a house in Washington, a city that annually ranks as one of the most-expensive cities in America. He also purchased his dream car: a black Chevrolet Camaro. Taylor's financial success was made possible by the District of Columbia Public Schools', or DCPS, revamped teacher compensation system known as IMPACTplus.

Introduced in 2009, IMPACTplus redesigned the step-and-lane pay scale—which rewarded teachers solely for years of experience and degree attainment—to include measures of performance and school leadership. Before the implementation of IMPACTplus, Taylor earned \$42,000 a year as a teacher and gave serious consideration to changing to a more lucrative profession. "The [increased] compensation has made me more inclined to stay in education," Taylor says now. "It also makes me more inclined to be a teacher in DCPS because if I go to other districts, I'm not making that type of money." Through IMPACTplus, teachers like Taylor who earn highly effective ratings on IMPACT—the DCPS teacher evaluation system that evaluates teacher performance through multiple measures, including student performance and observation of practice—receive substantial raises to their base salaries in addition to annual bonuses. Early data from DCPS show this strategy of financially rewarding high-performing teachers more may be starting to pay dividends. A recent study found that DCPS has retained 92 percent of its highly effective teachers and 86 percent of its effective teachers between the 2010 and 2012 school years. By contrast, only 59 percent of the district's minimally effective teachers are still in DCPS during the same time period. In addition, another recent report found that while compensation was one of the top three reasons cited by high-performing teachers for leaving the classroom in other districts, in DCPS, high-performing teachers who left the district ranked compensation at the bottom of the list—20th out of 20 reasons—for ceasing to teach. Furthermore, over the last several years, the number of DCPS applicants for teaching positions rose by 45 percent. "We have effectively eliminated compensation as a reason our top teachers leave—and we're increasingly seeing great teachers coming to DCPS because they want to teach in a district where they can be paid what they deserve," said Scott Thompson, DCPS's deputy chief of human capital for teacher effectiveness. DCPS is not the only district that has overhauled its compensation system with the aim of paying effective educators substantially more than they earned in years prior, yet it is still an unusual practice. In nearly 90 percent of districts across the nation, teachers are not recognized for their effectiveness through increased compensation. This report reveals the key policy decisions undertaken by 10 districts that have made it possible to revamp their compensation systems and, at the same time, both keep their systems solvent and achieve district goals. While the specific goals of each district vary, all 10 districts used compensation to attract, retain, and leverage high-performing teachers. The 10 districts presented in this report have been among the first in the nation to redesign their teacher compensation systems. These so-called first-mover districts include: Baltimore City, Maryland; Denver, Colorado; Douglas County, Colorado; Harrison School District 2, Colorado; Hillsborough County, Florida; Lawrence, Massachusetts; New Haven, Connecticut; Pittsburgh, Pennsylvania; Putnam County, Tennessee; and Washington, D.C. First-mover districts vary in location, size, governance structure, and student academic performance, proving that diverse districts throughout the country can find ways to reform teacher compensation systems regardless of context. The first-mover districts considered the following key components during the teacher compensation redesign process. Not all districts altered each.

Can each of us achieve our own American dream while recognizing needs of other individuals, society, and future generations? Not if our present national policies continue, warns long term planning expert Joseph L. Daleiden. He persuasively argues that if present socioeconomic trends remain, our nation faces social disaster before the middle of the 21st century.These trends can be reversed, he insists, but only if we are willing to (1) reject failed policies both liberal and conservative directed at population growth, the environment, the national debt, trade, poverty, crime, race relations, education, healthcare, social security, and tax reform; (2) accept that all of these areas of concern are intertwined; and (3) take responsibility for our decisions.Avoiding ideology and platitudes, Daleiden's pragmatic approach relies on actual evidence of how prospective policies will influence human behavior and whether their outcomes will increase or decrease human happiness in the long run.Joseph L. Daleiden (Evanston, IL) is also the author of The Final Superstition: A Critical Evaluation of the Judeo-Christian Legacy, and The Science of Morality: The Individual, Community, and Future Generations.

Rocked by a flurry of high-profile sex discrimination lawsuits in the 1990s, Wall Street was supposed to have cleaned up its act. It hasn't. Selling Women Short is a powerful new indictment of how America's financial capital has swept end practices under the rug. Wall Street is supposed to be a citadel of pure economics, paying for performance and evaluating performance objectively. People with similar qualifications and performance should receive similar pay, regardless of don't. Comparing the experiences of men and women who began their careers on Wall Street in the late 1990s, Louise Roth finds not only that women earn an average of 29 percent less but also that they are shunted into less lucrative promoted, and are denied the best clients. Selling Women Short reveals the subtle structural discrimination that occurs when the unconscious biases of managers, coworkers, and clients influence performance evaluations, work distribution, own words, Wall Street workers describe how factors such as the preference to associate with those of the same gender contribute to systematic inequality. Revealing how the very systems that Wall Street established ostensibly to con promote inequality, Selling Women Short closes with Roth's frank advice on how to tackle the problem, from introducing more tangible performance criteria to curbing gender-stereotypical client entertaining activities. Above all, firms could market forces lead to fair and unbiased outcomes. They don't.

Overcome the Invisible Barriers That Are Holding Women Back at Work

A modern classic, Einstein's Dreams is a fictional collage of stories dreamed by Albert Einstein in 1905, about time, relativity and physics. As the defiant but sensitive young genius is creating his theory of relativity, a new conception of time, he imagines many possible worlds. In one, time is circular, so that people are fated to repeat triumphs and failures over and over. In another, there is a place where time stands still, visited by lovers and parents clinging to their children. In another, time is a nightingale, sometimes trapped by a bell jar. Now translated into thirty languages, Einstein's Dreams has inspired playwrights, dancers, musicians, and painters all over the world. In poetic vignettes, it explores the connections between science and art, the process of creativity, and ultimately the fragility of human existence.

In the vein of #Girlboss and Nice Girls Don't Get the Corner Office, discover how to thrive at work from the head of the Global Innovation Coalition for Change at UN Women with this 'passionate, practical roadmap for addressing inequality and finally making our workplaces work for women' (Arianna Huffington). For years, we've been telling women that in order to succeed at work, they have to change themselves first—lean in, negotiate like a man, don't act too nice or you'll never get the corner office. But after sixteen years working with major Fortune 500 companies as a gender equality expert, Michelle King has realized one simple truth—the tired advice of fixing women doesn't fix anything. The truth is that workplaces are gendered; they were designed by men for men. Because of this, most organizations unconsciously carry the idea of an “ideal worker,” typically a straight, white man who doesn't have to juggle work and family commitments. Based on King's research and exclusive interviews with major companies and thought leaders, The Fix reveals why denying the fact that women are held back just because they are women—what she calls gender denial—is the biggest obstacle holding women back at work and outlines the hidden sexism and invisible barriers women encounter at work every day. Women who speak up are seen as pushy. Women who ask for a raise are seen as difficult. Women who spend hours networking don't get the same career benefits as men do. Because women don't look like the ideal worker and can't behave like the ideal worker, they are passed over for promotions, paid less, and pushed out of the workforce, not because they aren't good enough, but because they aren't men. In this fascinating and empowering book, King outlines the invisible barriers that hold women back at all stages of their careers, and provides readers with a clear set of takeaways to thrive despite the sexist workplace, as they fight for change from within. Gender equality is not about women, and it is not about men—it is about making workplaces work for everyone. Together, we can fix work, not women.
